

Service Manual

PRO-1000HDI

ORDER NO.
ARP3187

PLASMA DISPLAY

PRO-1000HDI

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
PRO-1000HDI	LUCXC	AC120V	

This service manual should be used together with the following manual(s).

Model No.	Order No.	Remarks
PDP-503CMX/ LUCB	ARP3150	SAFETY INFORMATION, EXPLODED VIEWS AND PARTS LIST, BLOCK DIAGRAM, PCB PARTS LIST, ADJUSTMENT, IC INFORMATION etc.

- Parts of the exploded views are all mentioned in this manual.
- The electrical parts are mentioned by contrast table in this manual.
(Refer to "3. Contrast of miscellaneous parts.")

For details, refer to "Important symbols for good services".

SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

SAFETY PRECAUTIONS

NOTICE : Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

- When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
- When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
- When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
- Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
- Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.
 - Perform the following precautions against unwanted radiation and rise in internal temperature.
 - Always return the internal wiring to the original styling.
 - Attach parts (Gasket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.
 - Perform the following precautions for the PDP panel.
 - When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
 - Make sure that the panel vent does not break. (Check that the cover is attached.)
 - Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.
 - Pay attention to the following.
 - When the front case is removed, infrared ray is radiated and may disturb reception of the remote control unit.
 - Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

Leakage Current Cold Check

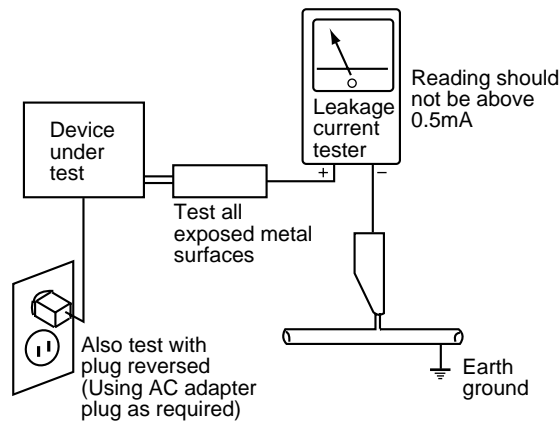

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of $0.3M\Omega$ and a maximum resistor reading of $5M\Omega$. Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

■Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

1. AC Power Cord
2. AC Inlet with Filter
3. Power Switch (S1)
4. Fuse (In the SW POWER SUPPLY Module)
5. STB Transformer and Converter Transformer (In the SW POWER SUPPLY Module)
6. Other primary side of the SW POWER SUPPLY Module

■High Voltage Generating Point

The places where voltage is 100V or more except for the charged places described above. If the places are touched, there is a risk of electric shock.

1. SW POWER SUPPLY Module (225V)
2. X DRIVE Assy (−300V to 225V)
3. Y DRIVE Assy (355V)
4. SCAN (A) Assy (355V)
5. SCAN (B) Assy (355V)
6. X CONNECTOR (A) Assy (−300V to 225V)
7. X CONNECTOR (B) Assy (−300V to 225V)

▨ : Part is Charged Section.

□ : Part is the High Voltage Generating Points other than the Charged Section.

Fig.1 Charged Section and High Voltage Generating Point (Rear View)

[Important symbols for good services]

In this manual, the symbols shown-below indicate that adjustments, settings or cleaning should be made securely. When you find the procedures bearing any of the symbols, be sure to fulfill them:

1. Product safety

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

2. Adjustments

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

3. Cleaning

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

4. Shipping mode and shipping screws

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

5. Lubricants, glues, and replacement parts

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount. For replacement parts or tools, the prescribed ones should be used.

2. EXPLODED VIEWS AND PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

● The  mark found on some component parts indicates the importance of the safety factor of the part.

Therefore, when replacing, be sure to use parts of identical designation.

● Screws adjacent to ▼ mark on product are used for disassembly.

● For the applying amount of lubricants or glue, follow the instructions in this manual.

(In the case of no amount instructions, apply as you think it appropriate.)

■ Caution in Replacement of Panel Chassis (50) Assy

Service Panel Assy (AWU1068) is all common use parts of for business, public use and module.
Supply it by the state that installed Circuit Board Spacer (AEC1872) and Wire Saddle (AEC1904) as follows.
Therefore need to remove it in accordance with model.

Confirm character carved a seal near the parts, and remove it.

P : Public exclusive use

W : Module exclusive use

PW : Common use of public use and module

* In case of this unit, all the parts carved a seal of character removes it.

Measurement Point

Trigger Signal

- T1 K4805 (HD_PLL) : For Horizontal Sync. Signal
- T2 IC4802 - pin 13 : For Vertical Sync. Signal

Measurement Condition

① to ②⑦ :

Input : INPUT 1 (Component)
 Input Signal : 480i
 Signal Pattern : H RAMP
 Screen Mode : WIDE
 Clamp Mode : AUTO
 Color Mode : COLOR MODE 1

②⑧ to ②⑨ :

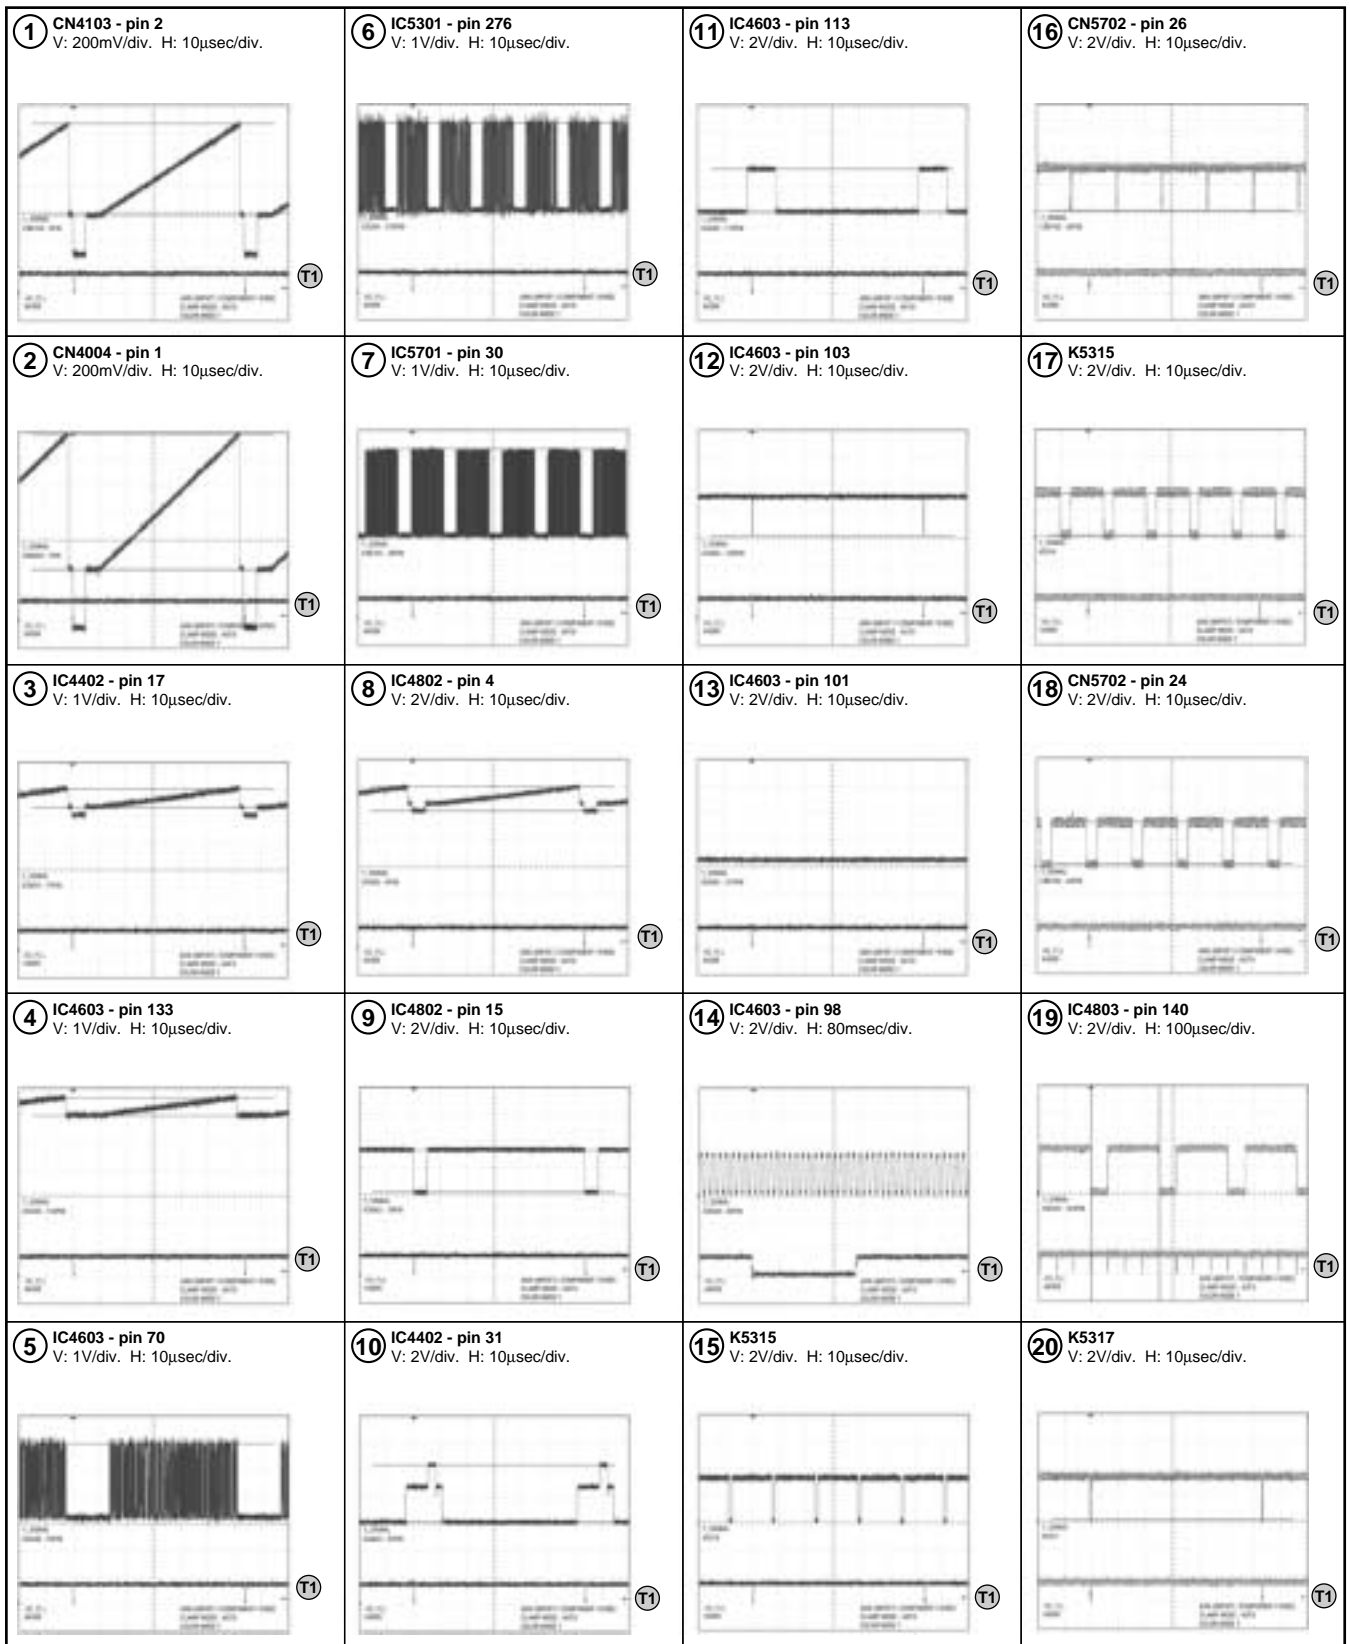

Input : INPUT 2 (RGBHV)
 Input Signal : XGA@60Hz
 Signal Pattern : Monoscope
 Screen Mode : FULL
 Clamp Mode : AUTO
 Color Mode : COLOR MODE 1

③② to ③③ :

Input : INPUT 2 (RGBHV)
 Input Signal : 1125i
 Signal Pattern : Monoscope
 Screen Mode : FULL
 Clamp Mode : AUTO
 Color Mode : COLOR MODE 1

● Information

NO.	Point	Information	Trigger Signal (CH4)
1	CN4103 - pin 2	Synchronize with K4805 (HD_PLL)	T1
2	CN4004 - pin 1	Synchronize with K4805 (HD_PLL)	T1
3	IC4402 - pin 17	Synchronize with K4805 (HD_PLL)	T1
4	IC4603 - pin 133	Synchronize with K4805 (HD_PLL)	T1
5	IC4603 - pin 70	Synchronize with K4805 (HD_PLL)	T1
6	IC5301 - pin 276	Synchronize with K4805 (HD_PLL) and frequency is 4 times.	T1
7	IC5701 - pin 30	Do not synchronize with K4805 (HD_PLL)	T1
8	IC4802 - pin 4	Synchronize with K4805 (HD_PLL)	T1
9	IC4802 - pin 15	Synchronize with K4805 (HD_PLL)	T1
10	IC4402 - pin 31	Synchronize with K4805 (HD_PLL)	T1
11	IC4603 - pin 113	Synchronize with K4805 (HD_PLL)	T1
12	IC4603 - pin 103	Synchronize with K4805 (HD_PLL)	T1
13	IC4603 - pin 101	No output	T1
14	IC4603 - pin 98	Clock signal that synchronizes with K4805 (HD_PLL)	T1
15	K5315 (HD_SEL)	Synchronize with K4805 (HD_PLL) and frequency is 4 times.	T1
16	CN5702 - pin 26	Do not synchronize with K4805 (HD_PLL)	T1
17	K5314 (DE_SEL)	Synchronize with K4805 (HD_PLL) and frequency is 4 times.	T1
18	CN5702 - pin 24	Do not synchronize with K4805 (HD_PLL)	T1
19	IC4803 - pin 140	Synchronize with K4805 (HD_PLL) and frequency is 1/4 times.	T1
20	K5317 (HD_SEL)	Synchronize with K4805 (HD_PLL)	T1
21	IC4803 - pin 11	Synchronize with IC4802 - pin 13	T2
22	K5316 (VD_SEL)	Synchronize with IC4802 - pin 13	T2
23	CN5702 - pin 28	Synchronize with IC4802 - pin 13	T2
24	IC4803 - pin 139	Synchronize with IC4802 - pin 13	T2
25	K4806	Synchronize with IC4802 - pin 13	T2
26	IC4402 - pin 31	Synchronize with IC4802 - pin 13	T2
27	K4603 (Y_SIGNAL)	Synchronize with IC4802 - pin 13	T2
28	K5314 (DE_SEL)	K5314 (DE_SEL) is fixed to "L" level in the PC signal indication. K5315 (HD_SEL) and k 5317 (HD _ 30) synchronize with K5316 (VD_SEL).	K5316 (VD_SEL)
	K5315 (HD_SEL)		
	K5316 (VD_SEL)		
	K5317 (HD_30)		
29	K5314 (DE_SEL)	Magnified K5316 (VD_SEL) section of No. 28. K5315 (HD_SEL) and K5317 (HD _ 30) are the same frequency in the PC signal indication.	K5316 (VD_SEL)
	K5315 (HD_SEL)		
	K5316 (VD_SEL)		
	K5317 (HD_30)		
30	K5314 (DE_SEL)	K5314 (DE_SEL) is not fixed to "L" level in the PC signal indication by the DVI input. K5314 (DE_SEL), K5315 (HD_SEL) and k 5317 (HD_30) synchronize with K5316 (VD_SEL).	K5316 (VD_SEL)
	K5315 (HD_SEL)		
	K5316 (VD_SEL)		
	K5317 (HD_30)		
31	K5314 (DE_SEL)	Magnified K5316 (VD_SEL) section of No. 30. K5314 (DE_SEL), K5315 (HD_SEL) and K5317 (HD_30) are the same frequency in the PC signal indication by the DVI input.	K5316 (VD_SEL)
	K5315 (HD_SEL)		
	K5316 (VD_SEL)		
	K5317 (HD_30)		
32	K5314 (DE_SEL)	K5314 (DE_SEL) is not fixed to "L" level in the 1125i indication. K5314 (DE_SEL), K5315 (HD_SEL) and k 5317 (HD _ 30) synchronize with K5316 (VD_SEL).	K5316 (VD_SEL)
	K5315 (HD_SEL)		
	K5316 (VD_SEL)		
	K5317 (HD_30)		
33	K5314 (DE_SEL)	Magnified K5316 (VD_SEL) section of No. 32. Frequency of 2 times of K5314 (DE_SEL), K5315 (HD_SEL) and K5317 (HD_30) in the 1125i indication.	K5316 (VD_SEL)
	K5315 (HD_SEL)		
	K5316 (VD_SEL)		
	K5317 (HD_30)

5. PCB CONNECTION DIAGRAM

NOTE FOR PCB DIAGRAMS :

- 1. Part numbers in PCB diagrams match those in the schematic diagrams.
- 2. A comparison between the main parts of PCB and schematic diagrams is shown below.

Symbol In PCB Diagrams	Symbol In Schematic Diagrams	Part Name
		Transistor
		Transistor with resistor
		Field effect transistor
		Resistor array
		3-terminal regulator

- 3. The parts mounted on this PCB include all necessary parts for several destinations.
For further information for respective destinations, be sure to check with the schematic diagram.
- 4. View point of PCB diagrams.

6. PCB PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

● The Δ mark found on some component parts indicates the importance of the safety factor of the part.

Therefore, when replacing, be sure to use parts of identical designation.

● When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω \rightarrow 56 x 10¹ \rightarrow 561 RD1/4PU $\overline{561}$ J

47k Ω \rightarrow 47 x 10³ \rightarrow 473 RD1/4PU $\overline{473}$ J

0.5 Ω \rightarrow R50 RN2H $\overline{R50}$ K

1 Ω \rightarrow 1R0 RS1P $\overline{1R0}$ K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω \rightarrow 562 x 10¹ \rightarrow 5621 RN1/4PC $\overline{5621}$ F

7. ADJUSTMENT

7.1 SERVICE FACTORY MODE

Commands in Service Factory mode must be issued using the remote control unit (AXD1459) supplied with the Plasma Display.

7.1.1 State Transition Diagram

• AXD1459
(PRO-1000HDI)

• AXD1432
(PDP-501HD)

• AXD1673
(PDP-502HD)

■ Notes on Operation with the Remote Control Unit

- In this manual, keys that are not on the remote control unit (AXD1459) supplied with the Plasma Display are designated as direct-select keys.
- To select items in Service Factory mode with the AXD1459, press the following keys as many times as required:
For selection of main items: MUTE key
For selection of other items: ▲ (UP) or ▼ (DOWN) key

■ Change of Settings When Entering Service Factory Mode

① Settings of MENU mode

- The settings for PICTURE items are reset to the center values.
Note: The PICTURE adjustment values to be reset are limited to the following:
For VIDEO: Those for the current signal mode of the selected input function
For a PC: Tables A-H are reset according to the history of the input signal mode
- All settings for SCREEN items are reset to the center values.
Note: The SCREEN adjustment values to be reset are only those for the current signal mode of the selected input function.
This is because the adjustment values of the MENU mode can be reset to the center values by executing FINAL SETUP or PICTURE DEFAULT.
- The settings for SETUP and OPTION of the MENU mode are maintained, except for the following:
COLOR TEMP: It is reset to MIDDLE.
AUTO POWER OFF/POWER MANAGEMENT: The settings are maintained, but these functions do not work.

② Adjustment values of the Integrator mode

- The following adjustment values for PICTURE and WHITE BAL are reset to the default values:
Note: The PICTURE and WHITE BAL adjustment values to be reset are limited to the following:
For VIDEO: Those for the current signal mode of the selected input function
For a PC: Tables A-H are reset according to the history of the input signal mode.
- The SCREEN settings are maintained.
- The settings for SETUP and OPTION of the Integrator menu are maintained, except for the following:
SIDE MASK LEVEL: The adjustment values are reset to the default values.
FULL MASK that has been set in Integrator mode: Released
OFF TIMER: Released
- The COLOR MODE (Integrator menu) settings that have been set in the Integrator menu are maintained.

③ Others

- If the input signal mode is changed in Service Factory mode, settings are changed according to the input signal mode, Service Factory mode is maintained, and its default display (INFORMATION VERSION) appears.
Note: When the input signal mode is changed, settings are reset as shown in ① and ② above.
- If FUNCTION switching is executed in Service Factory mode, the function is switched to the selected one, Service Factory mode is maintained, and its default display (INFORMATION VERSION) appears.
Note: When the FUNCTION is changed, settings are reset as shown in ① and ② above.
- The COLOR DETECT setting is performed based on the COLOR SYSTEM selected in MENU mode.
- Only the data at addresses 0100 to 01FF of the module microcomputer/EEPROM are copied (updated) to the module microcomputer area of the main microcomputer EEPROM.
- Various panel protection functions (still-picture detection, block-brightness detection, SCAN IC protection function) are deactivated.
Note: The protection functions are kept deactivated even after you exit Service Factory mode. To reactivate these functions, after exiting Service Factory mode, be sure to turn the power off, then back on.
- While there is no input, The partial setting, or while incompatible PC signals are input, settings that are not dependent on the signal mode can be performed. (For the MASK setting, see "MASK 1," and "MASK 2.") The setting items that are dependent on the input signal mode are grayed on the display and cannot be changed.

7.1.2 Table of Adjustment Items in Service Factory

SLOT

	Name	OSD Display Name	RS-232C Command	Service Factory Operation	Adjustment Range [OFFSET Reference Value]

	V-SUS	V-SUS	VSU	REF-DIGITAL-12	0 to 255
	V-OFFSET	V-OFFSET	VOF	REF-DIGITAL-13	0 to 255

SIDE MASK LEVEL (VIDEO OPTION)

	Name	OSD Display Name	RS-232C Command	Service Factory Operation	Adjustment Range [OFFSET Reference Value]
IC30	R SIDE MASK LEV	R SIDE MASK LEV	RSL	VOP-M LEV-1	0 to 255
	G SIDE MASK LEV	G SIDE MASK LEV	GSL	VOP-M LEV-2	0 to 255
	B SIDE MASK LEV	B SIDE MASK LEV	BSL	VOP-M LEV-3	0 to 255

COLOR TEMP (VIDEO OPTION)

	Name	OSD Display Name	RS-232C Command	Service Factory Operation	Adjustment Range [OFFSET Reference Value]
IC102	COLOR	COLOR		VOP-CT-3	0 to 255 [128]
	TINT	TINT		VOP-CT-4	0 to 255 [128]
IC30	MCONTRAST	CONTRAST		VOP-CT-1	0 to 255 [128]
	MBRIGHT	BRIGHT		VOP-CT-2	0 to 255 [128]
	R HIGH	R. HIGH		VOP-CT-5	0 to 255 [255]
	G HIGH	G. HIGH		VOP-CT-6	0 to 255 [255]
	B HIGH	B. HIGH		VOP-CT-7	0 to 255 [255]
	R LOW	R. LOW		VOP-CT-8	0 to 255 [128]
	G LOW	G. LOW		VOP-CT-9	0 to 255 [128]
	B LOW	B. LOW		VOP-CT-10	0 to 255 [128]

COLOR MODE2 (VIDEO OPTION)

	Name	OSD Display Name	RS-232C Command	Service Factory Operation	Adjustment Range [OFFSET Reference Value]
IC102	COLOR	COLOR		VOP-CM2-3	0 to 255 [128]
	TINT	TINT		VOP-CM2-4	0 to 255 [128]
IC30	MCONTRAST	CONTRAST		VOP-CM2-1	0 to 255 [128]
	MBRIGHT	BRIGHT		VOP-CM2-2	0 to 255 [128]
	R HIGH	R. HIGH		VOP-CM2-5	0 to 255 [255]
	G HIGH	G. HIGH		VOP-CM2-6	0 to 255 [255]
	B HIGH	B. HIGH		VOP-CM2-7	0 to 255 [255]
	R LOW	R. LOW		VOP-CM2-8	0 to 255 [128]
	G LOW	G. LOW		VOP-CM2-9	0 to 255 [128]
	B LOW	B. LOW		VOP-CM2-10	0 to 255 [128]

Calculation of Adjustment Value in Service Factory Mode

- An actual adjustment value in Service Factory mode is the addition of the REFERENCE adjustment value and OFFSET adjustment value, subtracted by the OFFSET reference value (values indicated in brackets in the above tables).

Note: As for the items that do not have OFFSET adjustment values (R SIDE MASK LEV, G SIDE MASK LEV, as well B SIDE MASK LEV of the SIDE MASK LEVEL items, and X-SUS-B, X-SUS-G, Y-SUS-B, Y-SUS-G, V-SUS, and V-OFFSET of the DIGITAL items), the REFERENCE adjustment value becomes the actual adjustment value.

- As for COLOR MODE 2 and COLOR TEMP, the adjustment value of the selected mode subtracted by its OFFSET reference value (value indicated in brackets in the above tables) becomes the OFFSET value. Adding this value to the adjustment value of each adjustment item in RGB2 becomes the final adjustment value for the RGB2 devices (IC30 and IC102).

Actual Calculation Examples

- Each adjustment value of SLOT/ RGB 1/RGB2/DIGITAL (REFERENCE value)

+

{ (OFFSET value) – [OFFSET reference value] } ... Calculation of a value to be added as OFFSET

- COLOR MODE2 OFFSET value

{ (COLOR MODE2 adjustment value) - [OFFSET reference value] } ... Calculation of a value to be added as OFFSET for COLOR MODE2

Note: Add it only when COLOR MODE2 is selected.

- COLOR TEMP OFFSET value

{ (COLOR TEMP adjustment value) - [OFFSET reference value] } ... Calculation of a value to be added as OFFSET for COLOR TEMP

Note: Add it only when COLOR TEMP 1,2,4, or 5 is selected.

Perform the addition in the normal operation, menu mode and COLOR TEMP adjustment mode of the Service Factory mode (in item VIDEO OPTION), and add the OFFSET value of the selected setting.

The addition of the COLOR TEMP OFFSET value is not needed in Integrator mode or in Service Factory mode (except for COLOR TEMP adjustment mode,) because the unit operates with the COLOR TEMP 3 settings.

7.1.3 Description of Service Factory Menu Display

1. In Adjustment Item

	1	5	10	15	20	25	30	35	40
1			OFS-SLOT			#1-U2-IN4-04-2*NT			
5									
10									
15			Y-DELAY				:****(****)		
16									

Display color : White
 Halftone : Blue (second line/15th line for each 5 to 36 columns)
 When the input signal mode is not identified, the adjustment value is displayed with "_____" (_____), and the item indication is grayed.

- Second line / 6th to 16th columns : Display the higher layer of selection item ••• In Service Factory mode
- Second line / 6th to 7th columns : Display the ID No. ••• In RS-232C Factory mode
- Second line / 9th to 16th columns : Display the higher layer of selection item ••• In RS-232C Factory mode
- Second line / 19th to 20th columns : Current color mode setting
- Second line / 22th to 23th columns : Current slot type

Slot Type or Model Type	PDA-5002	PDP-503PRO and PRO-1000HD	Slot Manufactured by Other Vender	No SLOT	PRO-800HDI and PRO-1000HDI
Display	S1	US	T1 to T8	NO	U2

- Second line / 25th to 27th columns : Current function
- Second line / 29th to 32th columns : Current signal mode
- Second line / 32th columns : Current Screen size (See "Classification of input signal" for details in each value.)

Signal mode displays for mode 03, mode 31, mode E1, mode 61 or mode 71

Setting	Signal Mode Display
VIDEO	03
VGA	31
WVGA	E1
XGA	61
WXGA	71

Signal mode displays for mode 12 or mode 13

HDTV Mode Setting (Integrator Menu)	Signal Mode Display
1080i	12
1035i	13

Display in the no signal and incompatible signal

Signal Mode Display	Signal Definition
FB	OUT OF RANGE (Signal that cannot be measured with the main microcomputer)
FC	OUT OF RANGE (Video system signal without video signal)
FD	OUT OF RANGE (Incompatible signal at DVI input)
FE	OUT OF RANGE (Incompatible signal that is measurable with the main microcomputer, and not applicable to FC and FD)
FF	No signal

- Second line / 33th column : Current input form

Input Form	Component	Video-RGB	Composite	Y/C
Display	#	@	*	/

Non-display (blank) excepting above form.

- Second line / 34th to 35th columns : Current color system

Color System	NTSC	PAL	SECAM	4.43NTSC	PAL-M	PAL-N	BLACK/WHITE
Display	NT	PL	SC	4N	PM	PN	BW

Non-display (blank) in a case of a color system other than those mentioned above or when the COLOR SYSTEM setting is fixed.

- 15th line / 6th to 24th columns : Current item selection

- 15th line / 26th to 35th columns :

When RANGE CHECK is selected: Current selecting value

1. When REFERENCE is selected : Adjustment value
 2. When OFFSET is selected : OFFSET value (adjustment value) * Adjustment value is REFERENCE value + OFFSET value.
 3. When VIDEO OPTION is selected : No display
- When INITIALIZE is selected : Selected setting. (No display for an item having the lower layer.)

●Operating specifications

- If this setting screen is displayed when the unit is shifted from another mode, the SIDE MASK LEVEL display (the function called by pressing the "1" key) is displayed first. If the unit is shifted back from a lower-layer display of this setting screen, the originally selected item will be displayed.
- When any of the above keys is pressed, the corresponding operation is executed.
- COLOR MODE setting during COLOR MODE adjustment
When Service Factory mode is entered, the settings for COLOR MODE become those that set on the Integrator menu. However, during COLOR MODE 2 adjustment, the unit operates in COLOR MODE 2 regardless of the settings made on the Integrator menu.
- COLOR TEMP setting during COLOR TEMP adjustment
When Service Factory mode is entered, the setting for COLOR TEMP becomes MIDDLE regardless of the user's setting. During COLOR TEMP adjustment, the unit operates in the selected COLOR TEMP mode.

② COLOR MODE2 Adjustment

	1	5	10	15	20	25	30	35	40
1									

The color mode indicated on the second line, 35th column is the default setting and does not change according to the color mode being adjusted.

Display color : White
Half tone : Blue (second line / 15th line for each 5 to 36th columns)

●Basic Operation

Perform the adjustment of each parameter.

●Operating specifications

- When this mode is entered, the CONTRAST display (the function called by pressing the "1" key) is displayed first.
- When any of the above keys is pressed, the current adjustment value is stored in memory, then the corresponding operation will be executed.
- During COLOR MODE adjustment, the setting becomes COLOR MODE 2, and the adjusted value will be stored in memory, but the color mode setting will not be stored after adjustment is completed.

Display color : White
Half tone : Blue (second line / 15th line for
each 5 to 36th columns)

Perform the adjustment of each parameter.

- **Operating specifications**

- When this mode is entered, the CONTRAST display (the function called by pressing the "1" key) is displayed first.
- When any of the above keys is pressed, the current adjustment value is stored in memory, then the corresponding operation will be executed.
- During COLOR TEMP adjustment, the unit operates with the selected COLOR TEMP setting, and the adjusted value will be stored in memory, but the COLOR TEMP setting will return to MIDDLE after adjustment is completed.

7. INITIALIZE

[illegible]

Display color : White
Half tone : Blue (second line / 15th line for each 5 to 36th columns)

- **Basic Operation**

- Perform the modification and confirmation of various settings.

•Operating specifications

- If this setting screen is displayed when the unit is shifted from another mode, the COLOR DET display (the function called by pressing the "1" key) is displayed first. If the unit is shifted back from a lower-layer display of this setting screen, the originally selected item will be displayed.
- When any of the above keys is pressed, the corresponding operation is executed.
- As for the following items, the adjusted values will be stored in memory: COLOR DET., ACL SW, INTE. MODE, MEMO, VIDEO STANDARD, PC STANDARD, VIDEO MODE 1, PC MODE 1, HOURMETER SET, PULSEMETER SET, FINAL SETUP, MASK 1, MASK 2, and PICTURE DEFAULT.

•Function description

1. COLOR DET. : The color detection system is set.

→ EURO → SA → ALL →

2. EEP CHECK: EEPROM writing is checked.

The rightmost two digits in hexadecimal notation from the results of addition of data at subaddresses 1760-177C (PDC XGA/SHARP data) of the EEPROM are displayed.

3. ACL SW: The ACL is set.

4. INTEGRATOR MODE: The integrator protection is set.

5. P&P WRITE ENA: The writing permission of the EEPROM for Plug & Play is set.

6. HOURMETER SET: The hourmeter is displayed and set.

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

The upper three digits of SET DATA can be changed:

▲▼ : To select numbers

◀▶ : To select one of the upper three digits to be changed

SET : To register the setting and shift to the confirmation screen for setting changes.

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

◀▶ : To select YES or NO

SET : When YES is selected, the SET DATA are stored in memory, and the initial display appears. When NO is selected, NOW DATA is maintained, and the initial display appears.

7. PULSEMETER SET: The pulse meter is displayed and set.

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

The upper three digits of SET DATA can be changed:

▲▼ : To select numbers

◀▶ : To select one of the upper three digits to be changed

SET : To register the setting and shift to the confirmation screen for setting changes.

10			PULSEMETER	SET ?				
15			YES	NO				
16								

《》 : To select YES or NO

SET : When YES is selected, the SET DATA are stored in memory, and the initial display appears.
When NO is selected, NOW DATA is maintained, and the initial display appears.

B

8. FINAL SETUP: Factory preset values are set.
(See FINAL SETUP Details.)
9. VIDEO STANDARD: The peak occurrences of STANDARD (USER MENU / POWER CONTROL) in the video system signal is set.
(Table 1 setting in the following table.) Note: Please do not change settings during service.
10. PC STANDARD: The peak occurrences of STANDARD (USER MENU / POWER CONTROL) in the PC system signal is set.
(Table 2 setting in the following table.) Note: Please do not change settings during service.
11. VIDEO MODE1: The peak occurrences of MODE1 (USER MENU / POWER CONTROL) in the video system signal is set.
(Table 3 setting in the following table.) Note: Please do not change settings during service.
12. PC MODE1: The peak occurrences of MODE1 (USER MENU / POWER CONTROL) in the PC system signal is set.
(Table 4 setting in the following table.) Note: Please do not change settings during service.

C

		Current Input Signal	
		VIDEO	PC
POWER CONTROL setting	STANDARD mode	Table1	Table2
	MODE1	Table3	Table4
	MODE2	PL6 (fixed)	

13. EEP DATA READ: Data on each address of the EEPROM are displayed.

1	5	10	15	20	25	30	35	40
1	INIT			#1-U2-IN4-02-2*NT				
5								
10								
15	EEP DATA READ			: 10FF-80				
16								

《》 : To select a digit (four digits) of an address

▲▼ : To select numbers

SET : To shift to the next higher layer

Displayed data for each address are updated each time the address is changed.

Display color : White (Selected address is yellow)

Half tone : Blue (second line / 15th line for each 5 to 36th columns)

D

E

14. MASK1: To select the full mask. (Refer to "① MASK1" .)
Note: The last setting for either MASK 1 or MASK 2 is stored in memory.
15. MASK2: To select the mask pattern. (Refer to "② MASK2" .)
Note: The last setting for either MASK 1 or MASK 2 is stored in memory.

Notes on MASK 1 and MASK 2

- When any key is pressed, an OSD is displayed for two seconds, and during this period the full mask signal output is stopped.
- When the full mask is selected on the MASK selection menu, two seconds after the full mask is selected (with no key pressed during this period,) the displayed OSD disappears, then full mask is displayed in turn.
- To release the mask setting, use "M00" of RS-232C Factory Adjustment mode or "MASK OFF" of Service Factory menu.
(The mask setting cannot be released with FULL MASK OFF of the Integrator menu or "FMN" of the RS-232C Factory Adjustment mode.)

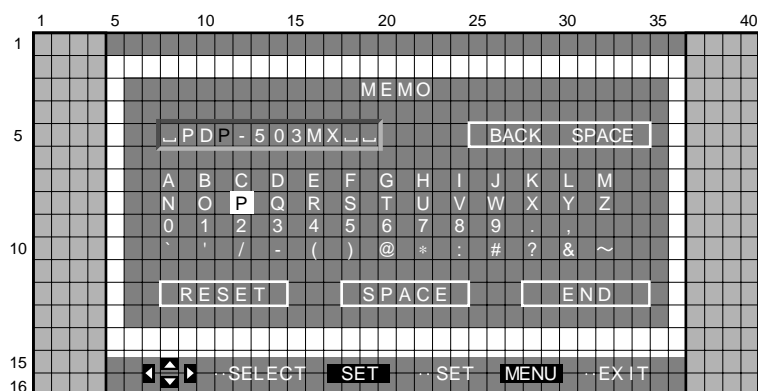

F

16. MEMO: Memo data are displayed and edited.

<MEMO/SELECT>

- With the ▲ or ▼ key, a MEMO to be edited can be selected.
- If you press the SET key, the screen shifts to MEMO/EDIT.
- If you select BACK and then press the SET key, the screen shifts to the next higher layer.

<MEMO/EDIT>

- For details on editing, see "INPUT Label" of the user menu.
- The default display is "_____". (□: Space)
- When RESET is selected, the setting is reset to the default.

17. SERVICE PARTS : The PD number of the module microcomputer is rewritten to the parts recognition number for service.

See "7.1.3 AUTOMATIC BACKUP OF DIGITAL VIDEO ASSY DATA".

Parts recognition number for service: Modify the leftmost digit of the PD number to F

Example: F691 (an original PD number is 5691).

Note: Modification of the PD number to the ID number for service is needed only for the EEPROM of the module microcomputer.

The ID number for service in the data area of the module microcomputer in the EEPROM of the main microcomputer must not be changed.

18. PICTURE DEFAULT

- The data adjusted in Service Factory mode will become the new default settings for PICTURE, WHITE BAL, and SIDE MASK LEVEL of the Integrator menu.
- As long as PICTURE DEFAULT or FINAL SETUP is not executed, the settings made in Service Factory mode are not reflected in the video output data in modes other than Service Factory mode.
- To make the values adjusted during Service Factory mode go into force, PICTURE DEFAULT must be executed after adjustment.

Note: If PICTURE DEFAULT is executed:

- ① All the PICTURE items set on the user menu are reset.
- ② The values for PICTURE, WHITE BAL, and SIDE MASK LEVEL of the Integrator menu will become those of current adjustment values of Service Factory mode.

●Operating specifications

- When this mode is entered, the MASK OFF display (the function called by pressing the "1" key) is displayed first. However, if any MASK setting has been already made, the selected MASK item is displayed first.
- If this mode is entered with any of the MASK items in MASK 1 selected, the settings for MASK 1 become invalid, and the MASK OFF display (the function called by pressing the "1" key) is displayed first.
- When any of the above keys is pressed, the current adjustment value is stored in memory, then the corresponding operation will be executed.

Note: During MASK setting, an OSD is not displayed. If another operation is selected, an OSD is displayed for 2 seconds after the MASK signal output is stopped, then the selected MASK display will be displayed again.

7.2 ADJUSTMENT REQUIRED WHEN THE SET IS REPAIRED OR REPLACED

■ RGB Assy

● When repaired

1. Adjustment is impossible when the Matrix IC or AD/PLL/AMP IC is replaced.
2. Adjustment is unnecessary in other cases.

● When replaced

White balance adjustment

■ SW POWER SUPPLY Module

● When replaced

No adjustment required.

■ DIGITAL VIDEO Assy

● When repaired

No adjustment required.

● When replaced

1. Adjustment is unnecessary when only the DIGITAL VIDEO Assy is replaced.
2. When the RGB Assy is replaced at the same time as this assembly, remove the IC1204 (24LC04(1)SN-TBB) from the old PC board of the DIGITAL VIDEO Assy and attach it to the new PC board.
3. If you are reusing the collected old PC board as a service part, attach the new IC1204 to the board.

■ Y DRIVE Assy

● When replaced

1. Panel white balance adjustment

■ X DRIVE Assy

● When replaced

1. Panel white balance adjustment

■ VIDEO SLOT US2 ASSY

● When repaired

1. Y LEVEL adjustment
2. Color difference and TINT adjustment

● When replaced

No adjustment required.

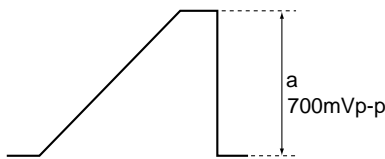

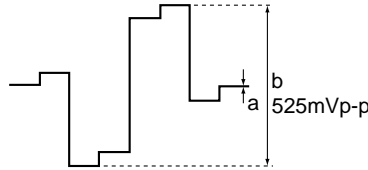

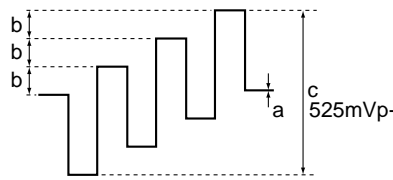

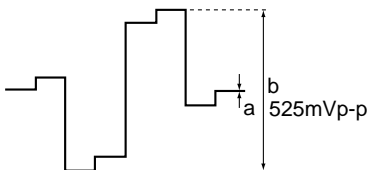

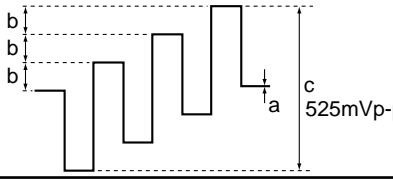

Fig. 1 Configuration of the PC Board (rear side view)

7.3 ADJUSTMENT

7.3.1 VIDEO SLOT US2 ADJUSTMENT

- Adjust after controlling each IC.

Step	Adjustment Item	Input Signal	Control	Measuring Point	Adjusting Value	Adjusting Method
1	Y Level Adjustment (IC7202)	RAMP	IC7202 (SA8E)	CN7502-pin 3	700mVp-p	Adjust the level so that the waveform becomes 700 mVp-p. 
2	R-Y Offset Adjustment (IC7202)	Color-Bar	IC7202 (SA8E)	CN7502-pin 7	525mVp-p	Adjust the offset so that the pedestal level becomes constant. 
3	B-Y Offset Adjustment (IC7202)	Color-Bar	IC7202 (SA8E)	CN7502-pin 5	525mVp-p	a: Adjust the offset so that the pedestal level becomes constant. b: Adjust the TINT so that the height ratio of each staircase waveform becomes constant. 
4	TINT Adjustment (IC7202)					
5	R-Y Level Adjustment (IC7201)	Color-Bar	IC7501 (SA40)	CN7502-pin 7	525mVp-p	Adjust the level so that the waveform becomes 525 mVp-p. 
6	B-Y Level Adjustment (IC7201)	Color-Bar	IC7501 (SA40)	CN7502-pin 5	525mVp-p	Adjust the Level so that the waveform becomes 525 mVp-p. 

Each adjustment value is stored in IC7502.

● Operating Check

After each adjustment is completed, confirm that the following signals are output correctly.

- INPUT3 input signal
- INPUT4 input signal
- INPUT5 input signal
- Signal-distinction circuit operation
- Audio signal

White-Balance Adjustment

- A Video Slot US2 is necessary for white balance adjustment for video signal of the RGB Assy.
- Adjust with video system signal (525i) and RGB (PC VGA) signal.
- Adjust so that the level and amplitude of the RED and BLUE signals become the same, referring to the GREEN signal.

Input Signal	Step	Adjusting Method
Video signal	1	Connect a Video Card to the RGB Assy through a jig cable to measure the RGB Assy. The signal level cannot be measured without a jig cable. Note: Be careful of the direction of the jig cable connector when connecting.
	2	Input a 525i component signal to INPUT 1 and INPUT 2. Use a signal consisting of the luminance signal only, such as a ramp signal or STEP signal, whose black level (0IRE) and gradation can be checked. Note: You can use a Y (luminance) signal of the standard NTSC component video signal.
	3	In the signal input function (INPUT1 or INPUT2), set the display mode of the VIDEO signal to COMPONENT. MENU → SETUP → VIDEO SIGNAL : COMPONENT
	4	Set the unit to Standby mode then to Factory mode. MENU → SET → POWER ON
	5	Turn the ACL SW setting to OFF. INITIALIZE mode ACL SW : "3" key Select OFF with the right and left keys.
	6	Decrease the MAT CONT adjustment value of OFFSET-RGB1 by 3. OFFSET mode: Select RGB 1 mode with the top and bottom keys. MAT CONT : "1" key Decrease the adjustment value by 3 with the right and left keys.
	7	Decrease the MAT BRIGHT adjustment value of OFFSET-RGB1 by 2. OFFSET mode: Select RGB 1 mode with the top and bottom keys. MAT BRIGHT : "2" key Decrease the adjustment value by 2 with the right and left keys.
	8	Take a trigger of the oscilloscope with HD_PLL (3.3Vp-p) of K4805.
	9	Measure the signal waveform of the Green signal at K4603, and measure the black level (0IRE) and amplitude.
	10	AD R LOW adjustment Measure the black level (0IRE) of the Red signal at K4602, and adjust the level of AD R LOW so that its black level (0IRE) becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R LOW : "9" key Adjust with the right and left keys.
	11	AD R HIGH adjustment Measure the signal amplitude of the Red signal at K4602, and adjust the level of AD R HIGH so that its signal amplitude becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R HIGH : "6" key Adjust with the right and left keys.
	12	AD B LOW adjustment Measure the black level (0IRE) of the Blue signal at K4604, and adjust the level of AD B LOW so that its black level (0IRE) becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD B LOW : "11" key Adjust with the right and left keys.
	13	AD B HIGH adjustment Measure the signal amplitude of the Blue signal at K4604, and adjust the level of AD B HIGH so that its signal amplitude becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD B HIGH : "8" key Adjust with the right and left keys.

Input Signal	Step	Adjusting Method
Video signal		<p>● Adjust the black level of the Red and Blue signals referring to that of the Green signal</p> <p>● Adjust the signal amplitude of the Red and Blue signals referring to that of the Green signal</p> 
	14	<p>Increase the MAT CONT adjustment value of OFFSET-RGB1 by 3. OFFSET mode: Select RGB 1 mode with the top and bottom keys. MAT CONT : "1" key Increase the adjustment value by 3 with the right and left keys.</p>
	15	<p>Increase the MAT BRIGHT adjustment value of OFFSET-RGB1 by 2. OFFSET mode: Select RGB 1 mode with the top and bottom keys. MAT BRIGHT : "2" key Increase the adjustment value by 2 with the right and left keys.</p>
	16	<p>Turn the ACL SW setting to ON. INITIALIZE mode ACL SW : "3" key Select ON with the right and left keys.</p>
RGB (PC) signal	1	<p>Input a RGB (PC) signal to the INPUT1 or INPUT2. Use a signal consisting of the luminance signal only, such as a ramp signal or STEP signal, whose black level (0IRE) and gradation can be checked. • Recommended signal: VESA VGA@60Hz</p>
	2	<p>Set the unit to Standby mode then to Factory mode. MENU → SET → POWER ON</p>
	3	<p>Take a trigger of the oscilloscope with HD_PLL (3.3Vp-p) of K4805.</p>
	4	<p>Measure the signal waveform of the Green signal at K4603, and measure the black level (0IRE) and amplitude.</p>
	5	<p>AD R LOW adjustment Measure the black level (0IRE) of the Red signal at K4602, and adjust the level of AD R LOW so that its black level (0IRE) becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R LOW : "9" key Adjust with the right and left keys.</p>
	6	<p>AD R HIGH adjustment Measure the signal amplitude of the Red signal at K4602, and adjust the level of AD R HIGH so that its signal amplitude becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R HIGH : "6" key Adjust with the right and left keys.</p>

Input Signal	Step	Adjusting Method
RGB (PC) signal	7	AD B LOW adjustment Measure the black level (0IRE) of the Blue signal at K4604, and adjust the level of AD B LOW so that its black level (0IRE) become the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD B LOW : "11" key Adjust with the right and left keys.
	8	AD B HIGH adjustment Measure the signal amplitude of the Blue signal at K4604, and adjust the level of AD B HIGH so that its signal amplitude become the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R LOW : "8" key Adjust with the right and left keys.
		<div> <p>● Adjust the black level of the Red and Blue signals referring to that of the Green signal</p> </div> <div> <p>● Adjust the signal amplitude of the Red and Blue signals referring to that of the Green signal</p> </div>

Color-Balance Adjustment

7.4.2 RS-232C COMMANDS (for setting)

	Command	Name	Function	RS-232C Factory	RS-232C Integrator	Normal Validity	Direct Validity	UP/DOWN Validity
A	AJN	ADJUST NO	To exit from the RS-232C Integrator mode	–	O	–	–	–
	AJY	ADJUST YES	To enter the RS-232C Integrator mode	–	–	O	–	–
	AMN	AUDIO MUTE NO	To turn the audio mute to OFF	O	O	O	–	–
	AMY	AUDIO MUTE YES	To turn the audio mute to ON	O	O	O	–	–
	AB0	ABL MODE0	To set the ABL setting to MODE0 (REFERENCE)	O	–	–	–	–
	AB1	ABL MODE1	To set the ABL setting to MODE1 (PC)	O	–	–	–	–
	AB2	ABL MODE2	To set the ABL setting to MODE2 (VIDEO60Hz)	O	–	–	–	–
B	AB3	ABL MODE3	To set the ABL setting to MODE3 (VIDEO50Hz)	O	–	–	–	–
	BBY	VIDEO RGB YES	To set the signal format to VIDEO RGB	O	O	–	–	–
	BR1	BAUD RATE1	To set the RS-232C baud rate to 1200BPS	O	O	–	–	–
	BR2	BAUD RATE2	To set the RS-232C baud rate to 2400BPS	O	O	–	–	–
	BR3	BAUD RATE3	To set the RS-232C baud rate to 4800BPS	O	O	–	–	–
	BR4	BAUD RATE4	To set the RS-232C baud rate to 9600BPS	O	O	–	–	–
	BR5	BAUD RATE5	To set the RS-232C baud rate to 19200BPS	O	O	–	–	–
C	BR6	BAUD RATE6	To set the RS-232C baud rate to 38400BPS	O	O	–	–	–
	CM1	COLOR MODE 1	To set to COLOR MODE 1	O	O	O	–	–
	CM2	COLOR MODE 2	To set to COLOR MODE 2	O	O	O	–	–
	CP1	VIDEO COMPONENT1 YES	To set the signal format to VIDEO COMPONENT1	O	O	–	–	–
	CP2	VIDEO COMPONENT2 YES	To set the signal format to VIDEO COMPONENT2	O	O	–	–	–
	CDE	COLOR DETECT EURO	To set the color detect to EURO	O	O	–	–	–
	CDM	COLOR DETECT ALL	To set the color detect to ALL	O	O	–	–	–
D	CDA	COLOR DETECT SA	To set the color detect to SA	O	O	–	–	–
	CT1	COLOR TEMP.1	To set the color temperature to -3000K or equivalent	O	O	–	–	–
	CT2	COLOR TEMP.2	To set the color temperature to -2000K or equivalent	O	O	–	–	–
	CT3	COLOR TEMP.3	To set the color temperature to \pm 0K or equivalent	O	O	–	–	–
	CT4	COLOR TEMP.4	To set the color temperature to +1000K or equivalent	O	O	–	–	–
	CT5	COLOR TEMP.5	To set the color temperature to +2000K or equivalent	O	O	–	–	–
	CL1	CLAMP MODE1	To set the clamp position to AUTO	O	O	–	–	–
E	CL2	CLAMP MODE2	To set the clamp position to fix	O	O	–	–	–
	DIN	OSD DISPLAY NO	To prohibit OSD display	O	O	O	–	–
	DIY	OSD DISPLAY YES	To permit OSD display	O	O	O	–	–
	DOF	DISPLAY OFF	To turn the OSD display to OFF	O	O	O	–	–
	DRN	DRIVE ON	To turn the drive to ON	It is valid in the RS-232C factory and STB			–	–
	DRF	DRIVE OFF	To turn the drive to OFF				–	–
	DSP	INPUT SIGNAL DISPLAY	To display current input signal information	O	O	–	–	–
F	DS2	DISPLAY2	To display current various information	O	O	–	–	–
	EWY	EEPROM WRITE YES	To enter Plug & Play EEPROM writing mode	O	–	–	–	–
	EWN	EEPROM WRITE NO	To exit from Plug & Play EEPROM writing mode	O	–	–	–	–
	FAN	FACTORY ADJUST NO	To exit from Factory adjustment mode	O	–	–	–	–
	FAY	FACTORY ADJUST YES	To enter Factory adjustment mode	–	–	O	–	–
	FST	FINAL SET UP	To reset various settings to the factory-preset values	O	–	–	–	–
	FRP	FRESH POSITION	To initialize SCREEN value of integrator	O	O	–	–	–
G	FCA	FAN CONTROL AUTO	To set the fan roll control to AUTO	O	O	–	–	–
	FCM	FAN CONTROL MAX	To set the fan roll control to MAX	O	O	–	–	–
	FMY	FULL MASK YES	To set to FULL MASK (white)	–	O	–	–	–
	FMR	FULL MASK RED	To set to FULL MASK (red)	–	O	–	–	–
	FMG	FULL MASK GREN	To set to FULL MASK (green)	–	O	–	–	–
	FMB	FULL MASK BLUE	To set to FULL MASK (blue)	–	O	–	–	–
	FMN	FULL MASK NO	To release the FULL MASK	–	O	–	–	–
H	FXO	FIX OUTPUT	To fix the audio output	O	O	–	–	–
	F50	FREE RUN 50Hz	To set the free-running to 50Hz in the MASK setting	O	–	–	–	–
	F60	FREE RUN 60Hz	To set the free-running to 60Hz in the MASK setting	O	–	–	–	–
	F70	FREE RUN 70Hz	To set the free-running to 70Hz in the MASK setting	O	–	–	–	–
	GAJ	GET ADJUST	To obtain various adjustment values of the display from EEPROM	O	–	–	–	–
	GPW	GET PANEL W/B	To obtain the panel W/B information from EEPROM	O	–	–	–	–
	GS1	GET STATUS 1	To obtain the version information of microcomputer from	O	–	–	–	–
I	GS2	GET STATUS 2	To obtain the PD information and temperature information from EEPROM	O	–	–	–	–
	GPS	GET POSITION DATA	TxD outputs of the positioning data	O	O	O	–	–
	GSO	GET STATUS OPTION	TxD outputs of data on various OPTION settings	O	O	O	–	–
	GSS	GET STATUS SET UP	TxD outputs of data on various SETUP settings	O	O	O	–	–
	GAS	GET ADJUST SLOT	TxD outputs of data of picture quality setting of SLOT	O	–	–	–	–
	GAR	GET ADJUST RGB	TxD outputs of data of picture quality adjustment (RGB 1)	O	–	–	–	–

	Command	Name	Function	RS-232C Factory	RS-232C Integrator	Normal Validity	Direct Validity	UP/DOWN Validity
G	GWB	GET WHITE BALANCE	TxD outputs of data of picture quality setting of RGB1	O	O	O	–	–
	GPD	GET POWER DOWN	TxD outputs of POWER DOWN information	O	–	–	–	–
H	HCN	HIGH CONTRAST NO	To turn the high contrast setting to OFF	O	O	–	–	–
	HCY	HIGH CONTRAST YES	To turn the high contrast setting to ON	O	O	–	–	–
	HMS	HOURLY METER SET	To set the hour meter to optional time	O	–	–	O	–
	HMD	HOURLY METER DISP.	To display the hour meter	O	O	–	–	–
	H80	HDTV MODE 1080 i	To set the HDTV mode to 1080 i	O	O	–	–	–
	H35	HDTV MODE 1035 i	To set the HDTV mode to 1035 i	O	O	–	–	–
I	IN1	INPUT1	To select INPUT1	O	O	O	–	–
	IN2	INPUT2	To select INPUT2	O	O	O	–	–
	IN3	INPUT3	To select INPUT3	O	O	O	–	–
	IN4	INPUT4	To select INPUT4	O	O	O	–	–
	IN5	INPUT5	To select INPUT5	O	O	O	–	–
	IMN	INTEGRATOR MODE NO	To set the Integrator mode to LOCK	O	–	–	–	–
	IMY	INTEGRATOR MODE YES	To set the Integrator mode to UNLOCK	O	–	–	–	–
	IDC	ID CLEAR	To clear the ID	O	O	–	–	–
	IDS	ID SET	To set the ID	O	O	–	O	–
K	KLN	KEY LOCK NO	To permit main unit key / remote control unit operation	O	O	–	–	–
	KLY	KEY LOCK YES	To prohibit main unit key / remote control unit operation	O	O	–	–	–
M	M00	MASK 00	Mask mode OFF	O	–	–	–	–
	M01	MASK 01	Pattern 1 (ramp)	O	–	–	–	–
	M02	MASK 02	Pattern 2 (color bars)	O	–	–	–	–
	M03	MASK 03	Pattern 3 (slanting lines)	O	–	–	–	–
	M04	MASK 04	Pattern 4 (for W/B measurement)	O	–	–	–	–
	M05	MASK 05	Pattern 5 (for W/B adjustment)	O	–	–	–	–
	M06	MASK 06	Pattern 6 (for W/B peak measurement)	O	–	–	–	–
	M07	MASK 07	Pattern 7 (for peak measurement)	O	–	–	–	–
	M08	MASK 08	Pattern 8 (reservation)	O	–	–	–	–
	M09	MASK 09	Pattern 9 (for SCAN IC protection test)	O	–	–	–	–
	M10	MASK 10	Pattern 10 (for SCAN IC protection test)	O	–	–	–	–

F

7.4.3 GET COMMAND

● Command Description

Command	Function
GAJ	Outputting data for electronic-control-adjustment values and drive-system-adjustment values
GPW	Outputting data related to the white-balance adjustment for the panel
GS1	Outputting data such as version information, and data from the hour meter and pulse meter
GS2	Outputting data for power down, temperature and condensation information
GAS	Outputting data related to the picture quality setting of SLOT
GAR	Outputting data related to the picture quality (RGB1 of the Factory menu)
GPD	Outputting data on PD information of Service Factory menu (past eight times)
GPS	Outputting data related to SCREEN adjustment data
GSD	Outputting TxD data on SD information of Service Factory menu
GWB	Outputting data related to picture quality / white balance
GSS	Outputting data on SETUP items of menu mode / Integrator menu
GSO	Outputting data on OPTION items of menu mode / Integrator menu

GAJ: Outputting data for electronic-control-adjustment values and drive-system-adjustment values

- Data are output according to the transmission order and size of the table below.
- This command is invalid in modes other than RS-232C Factory Adjustment mode.

Order	Data Contents	Size	Remarks
1	Setting mode of electric power upper limit value	3 byte	AB* (*: 0 to 3)
2	Electric power upper limit value (ABL)	(Reference data)	3 byte
3		(Offset data)	3 byte (Note 1)
4	Vsus adjustment value	(Reference data)	3 byte
5	Vofs adjustment value	(Reference data)	3 byte
6	V-SUS-B adjustment value	(Reference data)	3 byte
7	V-SUS-G adjustment value	(Reference data)	3 byte
8	Y-SUS-B adjustment value	(Reference data)	3 byte
9	Y-SUS-G adjustment value	(Reference data)	3 byte

(Note 1) : If data are output when the Reference mode is selected, the same data as the reference data are output as the offset data.

GPW (Get Panel White balance): Outputting data related to the white-balance adjustment for the panel

- Data are output according to the transmission order and size of the table below.
- This command is invalid in modes other than the RS-232C Factory Adjustment mode.

Order	Data Contents	Size	Remarks
1	Panel color temperature mode	3 byte	PT* (*: 0 to 3)
2	Gain of W/B adjustment value Red	(Reference data)	3 byte
3		(Offset data)	3 byte (Note 1)
4	Gain of W/B adjustment value Green	(Reference data)	3 byte
5		(Offset data)	3 byte (Note 1)
6	Gain of W/B adjustment value Blue	(Reference data)	3 byte
7		(Offset data)	3 byte (Note 1)
8	Offset of W/B adjustment value Red	(Reference data)	3 byte
9		(Offset data)	3 byte (Note 1)
10	Offset of W/B adjustment value Green	(Reference data)	3 byte
11		(Offset data)	3 byte (Note 1)
12	Offset of W/B adjustment value Blue	(Reference data)	3 byte
13		(Offset data)	3 byte (Note 1)

(Note 1) : If data are output when the Reference mode is selected, the same data as the reference data are output as the offset data.

GS1: Outputting data such as version information, and data from the hour meter and pulse meter

- Data are output according to the transmission order and size of the table below.
- This command is invalid in modes other than RS-232C Factory Adjustment mode.

Order	Data Contents	Size	Remarks
1	Display information	3 byte	See below
2	Module microcomputer model number	4 byte	5691 or F691
3	Module microcomputer version	3 byte	
4	Panel microcomputer version	3 byte	
5	Panel /FLASH ROM version	3 byte	
6	Hour meter (hour)	5 byte	Unit: H (hour)
7	Pulse meter	7 byte	Unit: 0.01G (10,000,000)
8	Main microcomputer model number	4 byte	PHDI
9	Main microcomputer version	3 byte	
10	Wide microcomputer version	3 byte	
11	Wide /FLASH ROM version	3 byte	

■ Display Information

Data	Model
MX5	PRO-1000HDI
MX4	PRO-800HDI

GS2: Outputting data for power down, temperature and condensation information

- Data are output according to the transmission order and size in the table below.
- This command is valid only in the following cases: in RS-232C Factory adjustment mode, during power-down or shutdown, and for 30 seconds until a shutdown occurs because of condensation formed inside the unit or audio failure.

Note: During power-down, when a failure occurs, or for 30 seconds until a shutdown occurs, data can be obtained by directly executing "GS2" without executing "FAY." However, the ID must be set beforehand.

Order	Data Contents	Size	Remarks
1	AC information	1 byte	Always 0 (not used)
2	Service parts distinction	1 byte	0: DIGITAL ASSY adjustment done 1: DIGITAL ASSY not adjusted (Service Assy)
3	Hour meter (hour, minute)	7 byte	*****H**M
4	Power-down information	2 byte	1st/2nd (*)
5	Temperature information	3 byte	8 bit
6	Condensation information	1 byte	1: Condensation
7	Panel microcomputer communication	1 byte	1: Communication failure
8	DIGITAL EEPROM communication	1 byte	1: Communication failure
9	DIGITAL EXPANDER communication	1 byte	1: Communication failure
10	Temperature information (TEMP2)	3 byte	8 bit
11	Temperature information (TEMP3)	3 byte	8 bit
12	Module microcomputer communication	1 byte	1: Communication failure
13	Wide microcomputer communication	1 byte	1: Communication failure
14	MAIN IIC	1 byte	1: Communication failure
15	MAIN EEPROM IIC	1 byte	1: Communication failure
16	AUDIO failure	1 byte	1: AUDIO failure
17	FAN failure	1 byte	1: FAN failure

(*) See the table below on contents of PD information.

Data	Power-Down Point
0	None
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	ADDRESS junction
7	ADDRESS resonance
8	DC/DC CONVERTER (DIGITAL)

GAS (Get Adjust Slot): Outputting data related to the picture quality setting

- Data are output according to the transmission order and size in the table below.
- Data for the SLOT section of the Factory menu are output.
- This command is invalid when the current input function is one other than VIDEO input of the SLOT system.
- This command is invalid in modes other than RS-232C Factory Adjustment mode.

Order	Data Contents		Size	Remarks
1	Y-DELAY	(Reference data)	3 byte	
2		(Offset data)	3 byte	(Note 1)
3	Y-OUT LEVEL	(Reference data)	3 byte	
4		(Offset data)	3 byte	(Note 1)
5	CD TINT	(Reference data)	3 byte	
6		(Offset data)	3 byte	(Note 1)
7	CDR OFFSET	(Reference data)	3 byte	
8		(Offset data)	3 byte	(Note 1)
9	CDB OFFSET	(Reference data)	3 byte	
10		(Offset data)	3 byte	(Note 1)
11	R-Y LEVEL	(Reference data)	3 byte	
12		(Offset data)	3 byte	(Note 1)
13	B-Y LEVEL	(Reference data)	3 byte	
14		(Offset data)	3 byte	(Note 1)

(Note 1) : If data are output when Reference mode is selected, the same data as the reference data are output as the offset data.

GAR: Output data related to the picture quality (RGB1 of the Factory menu)

- Data are output according to the transmission order and size in the table below.
- This command is invalid in modes other than RS-232C Factory Adjustment mode.

Order	Data Contents		Size	Remarks
1	AD MAIN CONT	(Reference data)	3 byte	(Note 1)
2		(Offset data)	3 byte	(Note 1) (Note 2)
3	AD R HIGH	(Reference data)	3 byte	(Note 1)
4		(Offset data)	3 byte	(Note 1) (Note 2)
5	AD G HIGH	(Reference data)	3 byte	(Note 1)
6		(Offset data)	3 byte	(Note 1) (Note 2)
7	AD B HIGH	(Reference data)	3 byte	(Note 1)
8		(Offset data)	3 byte	(Note 1) (Note 2)
9	AD R LOW	(Reference data)	3 byte	(Note 1)

21	MAT TINT	(Reference data)	3 byte	(Note 1)
22		(Offset data)	3 byte	(Note 1) (Note 2)

(Note 1) As for the setting data not related to the current input function/input signal/setting, dummy data are output.

(Note 2) If data are output when the Reference mode is selected, the same data as the reference data are output as the offset data.

GPS: Output data related to SCREEN adjustment data

- Data are output according to the transmission order and size in the table below.
- All data are data of an Integrator area.
- This command is valid only in Normal Operation mode and RS-232C Integrator Adjustment mode.

Order	Data Contents	Size	Remarks
1	H.POSITION	3 byte	
2	V.POSITION	3 byte	
3	CLOCK	3 byte	(Note 1)
4	PHASE	3 byte	(Note 1)
5	V.SIZE	3 byte	

(Note 1) When the current input signal mode is VIDEO, dummy data(*) are output as adjustment data.

GPD (Get Power Down), PD (Power Down) : Outputting data on PD INFORMATION of the Service Factory MENU

- The acquired data are output according to the transmission order and size in the table below.
- This command is valid only in RS-232C Factory Adjustment mode and during power-down.

Note: During power-down, data can be obtained by directly executing "GPD" without executing "FAY." However, the ID must be set beforehand.

Order	Data Contents	Size	Remarks
1	The latest "1stPD INFO"	1 byte	(Note 1)
2	The latest "2ndPD INFO"	1 byte	(Note 1)
3	Hour meter information of the latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
4	Second latest "1st PD INFO"	1 byte	(Note 1)
5	Second latest "2nd PD INFO"	1 byte	(Note 1)
6	Hour meter information of the second latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
7	Third latest "1st PD INFO"	1 byte	(Note 1)
8	Third latest "2nd PD INFO"	1 byte	(Note 1)
9	Hour meter information of the third latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
10	Fourth latest "1st PD INFO"	1 byte	(Note 1)
11	Fourth latest "2nd PD INFO"	1 byte	(Note 1)
12	Hour meter information of the fourth latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
13	Fifth latest "1st PD INFO"	1 byte	(Note 1)
14	Fifth latest "2nd PD INFO"	1 byte	(Note 1)
15	Hour meter information of the fifth latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
16	Sixth latest "1st PD INFO"	1 byte	(Note 1)
17	Sixth latest "2nd PD INFO"	1 byte	(Note 1)
18	Hour meter information of the sixth latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
19	Seventh latest "1st PD INFO"	1 byte	(Note 1)
20	Seventh latest "2nd PD INFO"	1 byte	(Note 1)
21	Hour meter information of the seventh latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
22	Eighth latest "1st PD INFO"	1 byte	(Note 1)
23	Eighth latest "2nd PD INFO"	1 byte	(Note 1)
24	Hour meter information of the eighth latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE

(Note 1) See the table below on PD information

Data	Power Down Point
0	None
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	ADDRESS junction
7	ADDRESS resonance
8	DC/DC CONVERTER (DIGITAL)

GSD (Get Shut Down) : Outputting TxD data on SD (Shut Down) INFORMATION of Service Factory MENU

- The acquired data are output according to the transmission order and size in the table below.
 - This command is valid only in RS-232C Factory Adjustment mode and during shut down (for 30 seconds until a shutdown occurs or standby).
- Note:** During power-down, data can be obtained by directly executing "GPD" without executing "FAY." However, the ID must be set beforehand.

Table 1: GSD

Order	Data Contents	Size	Remarks
1	The latest "SD INFO"	1 byte	(Note 1)
2	First latest "SD INFO"	1 byte	(Note 1)
3	Second latest "SD INFO"	1 byte	(Note 1)
4	Third latest "SD INFO"	1 byte	(Note 1)
5	Fourth latest "SD INFO"	1 byte	(Note 1)
6	Fifth latest "SD INFO"	1 byte	(Note 1)
7	Sixth latest "SD INFO"	1 byte	(Note 1)
8	Seventh latest "SD INFO"	1 byte	(Note 1)

(Note 1) See the table below on SD information

Table 2: SD contents

GET Data	Shut Down Point
1	Panel microcomputer communication failure
2	Module IIC communication failure
3	Condensation
4	Temperature abnormality
5	FAN abnormality
6	Module microcomputer communication failure
7	Wide microcomputer communication failure
8	Main IIC communication failure
9	AUDIO failure

GWB (Get White Balance): Outputting data related to picture quality / white balance

- Data are output according to the transmission order and size in the table below.
- This command is valid only in Normal Operation mode, RS-232C Integrator Adjustment mode, and RS-232C Factory adjustment mode.
- In Normal Operation mode and RS-232C Integrator Adjustment mode, data for the current signal and color mode of the current input function in the Integrator area are output.
- In RS-232C Factory Adjustment mode, RGB2 data for the Factory mode are output.

Order	Data Contents	Size	Remarks
1	CONTRAST	3 byte	
2		3 byte	(Note 2)
3	BRIGHT	3 byte	
4		3 byte	(Note 2)
5	COLOR	3 byte	(Note 1)
6		3 byte	(Note 2)
7	TINT	3 byte	(Note 1)
8		3 byte	(Note 2)
9	R HIGH	3 byte	
10		3 byte	(Note 2)
11	G HIGH	3 byte	
12		3 byte	(Note 2)
13	B HIGH	3 byte	
14		3 byte	(Note 2)
15	R LOW	3 byte	
16		3 byte	(Note 2)
17	G LOW	3 byte	
18		3 byte	(Note 2)
19	B LOW	3 byte	
20		3 byte	(Note 2)
21	H.ENHANCE (H.SHARP)	3 byte	
22	V.ENHANCE (V.SHARP)	3 byte	

(Note 1) As for the setting data not related to the current input function/input signal/setting, dummy data are output.

(Note 2) If data are output when the Reference mode is selected, the same data as the reference data are output as the offset data.

GSS: Outputting data on SETUP items of the menu mode / Integrator menu

• Data are output according to the transmission order and size in the table below.

• This command is valid only in Normal Operation mode, RS-232C Integrator Adjustment mode, and RS-232C Factory adjustment mode.

Order	Data Contents	Size	Output	Remarks
1	COLOR TEMP	1 byte	1: COLOR TEMP1 2: COLOR TEMP2 3: COLOR TEMP3 4: COLOR TEMP4 5: COLOR TEMP5	(Note 1)
2	DIGITAL NR	1 byte	0: OFF 1: LOW 2: MIDDLE 3: HIGH	(Note 1)
3	HIGH CONTRAST	1 byte	0: OFF, 1: ON	
4	PURECINEMA	3 byte	Same as the RS-232C command	(Note 1)
5	COLOR SYSTEM	3 byte	Same as the RS-232C command	(Note 1)
6	CLAMP	1 byte	1: AUTO 2: LOCKED	(Note 1)
7	3DY/C	1 byte	M: MOTION S: STILL	(Note 1)
8	SETTING/VIDEO SIGNAL	3 byte	Same as the RS-232C command	(Note 1)
9	2X2MODE	1 byte	0: OFF 1 to 4: MG1 to MG4 (See "MAGNIFY")	
10	BRIGHT ENHANCE	1 byte	0: OFF, 1: ON	
11	HDTV MODE	3 byte	Same as the RS-232C command	(Note 1)
12	VIDEO INPUT	1 byte	1: COMPONENT1 2: COMPONENT2	(Note 1)
13	Input function	3 byte	IN*	
14	Screen size	1 byte	0: DOT BY DOT 1: 4:3 (TYPE) 2: FULL (TYPE) 3: ZOOM 5: WIDE 6: 100% display	
15	SUB VOLUME (INPUT1)	2 byte	0 to 60

11	MIRROR MODE	1 byte	X: Right and left inverting Y: Top and bottom inverting Z: Top/bottom and right/left inverting N: OFF	
12	FAN CONTROL	1 byte	A: AUTO M: MAX	
13	MONITOR NAME	12 byte		
14	SLOT INPUT	1 byte	0: VIDEO (RGB) 1: COMPONENT1 2: COMPONENT2	(Note 1)
15	TEMPERATURE	3 byte	A/D input value	(Note 2)
16	HOURLY METER	5 byte		Unit : H
17	KEY LOCK	1 byte	0: Lock release 1: Lock	

(Note 1) Dummy data (*) are output when a SLOT manufactured by Pioneer is connected.

8. GENERAL INFORMATION

8.1 DIAGNOSIS

8.1.1 CONFIGURATION OF THE PC BOARD

8.1.2 DIAGNOSIS FOR SHUTDOWN AND POWER-DOWN BY LED

This unit has self-diagnosis functions against abnormalities in the internal circuits and other operational abnormalities, and if any abnormality is detected, the STANDBY/ON indicator (LED) blinks to alert you of it.

How the indicator blinks and possible failure points and power-down points are explained below:

● Shutdown

- Operations : When a microcomputer detected abnormality, it turns the power supply OFF.
- LED display : Blinking in green

Example: How the LED blinks when DIGITAL-IIC communications fail

Number of blinking	Reason
1	Panel Microcomputer failure
2	DIGITAL-IIC communication failure
3	Condensation
4	Temperature abnormality
5	FAN abnormality
6	Module microcomputer failure
7	Wide microcomputer failure
8	RGB-IIC communication failure
9	Audio failure

How to release shutdown

If the Power key on the remote control unit is pressed, the shutdown status is released, and the unit will be turned on. (It is not necessary to press the MAIN POWER button to turn off the unit.)

● Power-down

- Operations : In an emergency, the protection circuits are activated, and the power is turned off.
- LED display : Blinking in red

Note: If more than two protection circuits are activated at almost the same time, the LED indicates this by its blinking-pattern.

Example: How the LED blinks for the first power-down (Y-DC/DC CONVERTER) and the second power-down (Y DRIVE)

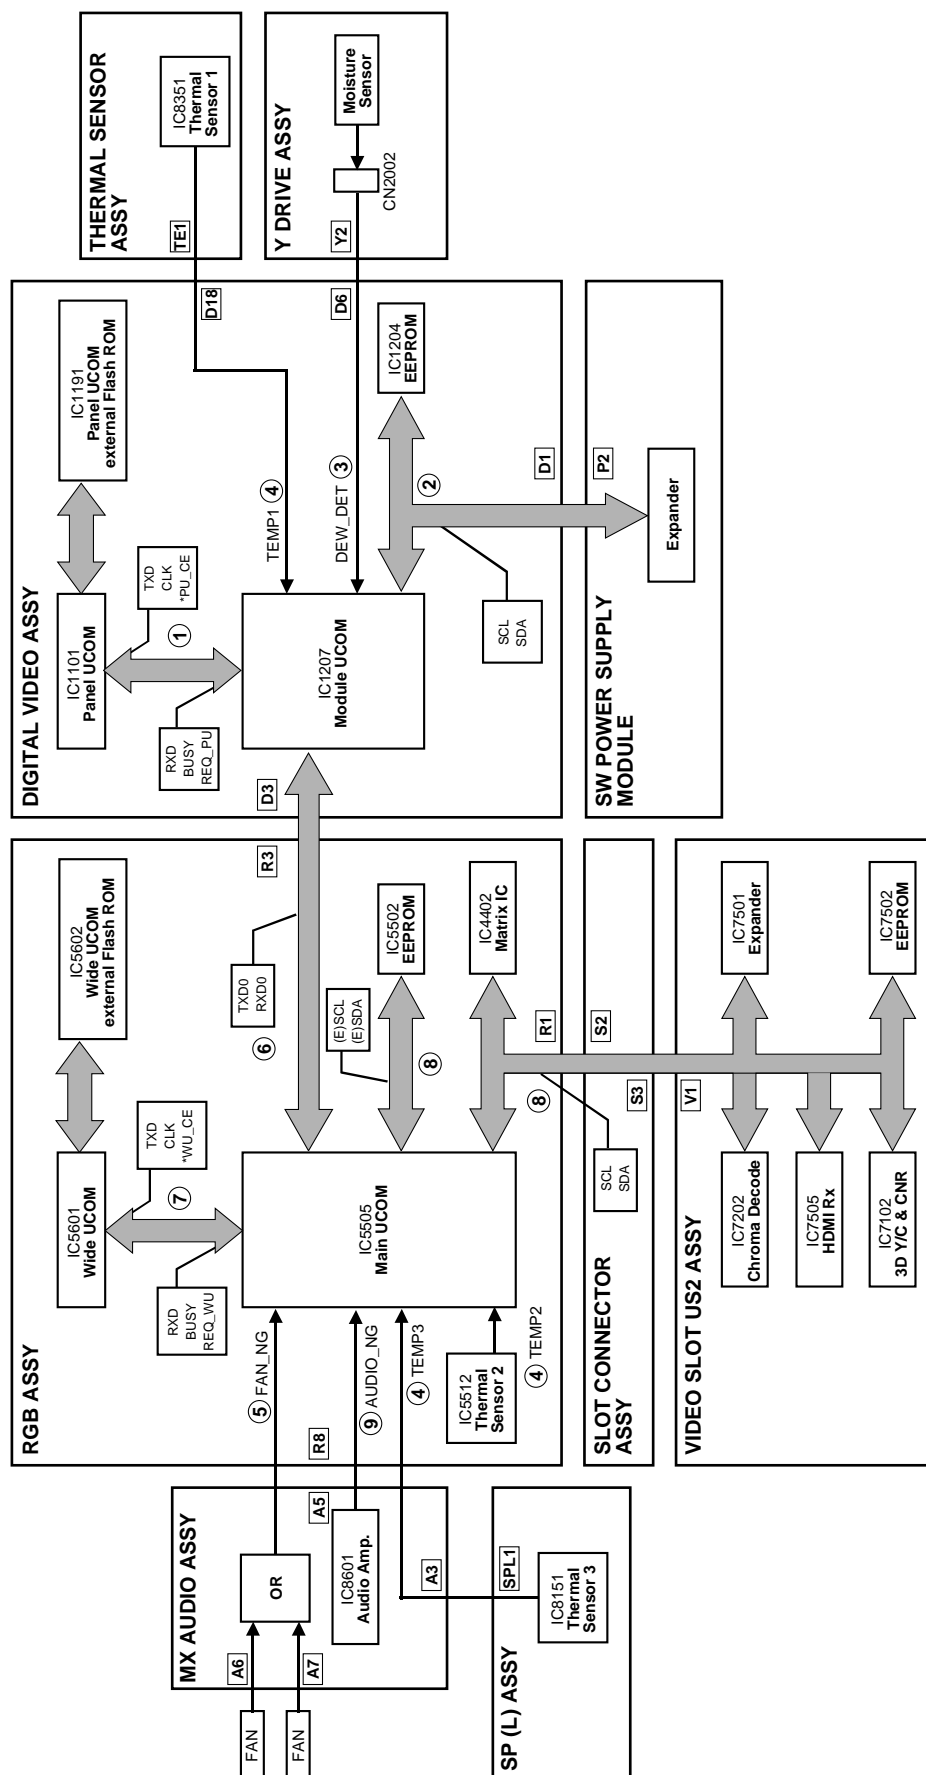

Number of blinks	Failure Point
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	Address junction
7	Address resonance
8	DIGITAL-DC/DC CONVERTER

How to release power-down

Set the MAIN POWER button to OFF, and wait for about 30 seconds until the LED for PD (power-down) in the power-supply module is extinguished. Wait another 5 seconds, then recover the unit by setting the MAIN POWER button to ON.

Note: After power-down is released, the unit restarts and goes in to Standby mode.

● Block Diagram of the Shutdown Signal System ("STANDBY/ON" LED: Blinking in green)

Note: The figures ① - ⑧ indicate the number of times the "STANDBY/ON" LED blinks when shutdown occurs in the corresponding route.

● Diagnosis Method in Shutdown

The data on the past eight shutdowns are stored in memory.

① OSD display of the Shutdown NG history

The shutdown NG history is displayed in "INFORMATION" of the Factory menu.

Display of the PD contents

Shutdown Point	OSD Display
Panel microcomputer communication failure	PANEL
Module IIC communication failure	MOD IIC
Condensation	DEW
Temperature abnormality	TEMP
FAN abnormality	FAN
Module microcomputer communication failure	MODULE
Wide microcomputer communication failure	WIDE
Main IIC communication failure	MAIN IIC
AUDIO failure	AUDIO

② Shutdown NG history by RS-232C command "GSD"

Order	Data Contents	Size
1	The latest "SD INFO"	1 byte
2	First latest "SD INFO"	1 byte
3	Second latest "SD INFO"	1 byte
4	Third latest "SD INFO"	1 byte
5	Fourth latest "SD INFO"	1 byte
6	Fifth latest "SD INFO"	1 byte
7	Sixth latest "SD INFO"	1 byte
8	Seventh latest "SD INFO"	1 byte

Shutdown Point	OSD Data
Panel microcomputer communication failure	1
Module IIC communication failure	2
Condensation	3
Temperature abnormality	4
FAN abnormality	5
Module microcomputer communication failure	6
Wide microcomputer communication failure	7
Main IIC communication failure	8
AUDIO failure	9

● Shutdown diagnosis

① Panel microcomputer failure

Condition : When the module microcomputer failed in communication with the panel microcomputer

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Possible causes

- Open/short-circuit of the communication lines in the assembly

② DIGITAL-IIC communication failure

Condition : When the module microcomputer failed in communication with an external EEPROM or EXPANDER

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Note: A DIGITAL-IIC communication failure may occur in Standby mode.

Possible causes

- Open / Short-circuit of communication line in the assemblies.
- Breaking of wire between the following point:
DIGITAL VIDEO Assy (D1) ↔ SW POWER SUPPLY Module (P2).

③ Condensation detection

Condition : When condensation has formed inside the unit

Results : As soon as condensation is detected, the unit will shut down.

Possible cause other than condensation

- Disconnection of CN2002 between the condensation sensor and the Y DRIVE Assy

④ Abnormally high temperature

Condition : When the internal temperature of the unit becomes abnormally high

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Possible causes if this abnormality occurs in an environment in which the temperature is not so high

- Disconnection between the SP TERMINA (L) Assy (SPL1) and MX AUDIO Assy (A3).
- Disconnection between the MX AUDIO Assy (A5) and RGB Assy (R8).
- Disconnection between the DIGITAL VIDEO Assy (D18) and temperature sensor 1 (TE1).

Screen display

Reference

Shutdown temperature of each temperature sensor

TEMP2 data ≥ 150 ($\approx 80^{\circ}\text{C}$)

TEMP3 data ≥ 101 ($\approx 56^{\circ}\text{C}$)

As for the TEMP 1 sensor, a shutdown occurs when a disconnection of connectors is detected, but does not occur because of temperature.

Temperature displayed in "INFORMATION" of the Factory menu

TEMP1 ($^{\circ}\text{C}$) \approx TEMP1 (data) -50

TEMP2 ($^{\circ}\text{C}$) \approx TEMP2 (data) /2+5

TEMP3 ($^{\circ}\text{C}$) \approx TEMP3 (data) /2+5

⑤ FAN failure

Condition : Fan failure

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Note: Fan failure is detected only in the following cases:

- When the FAN CONTROL is set to MAX
- When the FAN CONTROL is set to AUTO, and the temperature at the TEMP3 sensor is 30°C or higher (Fan failure is not detected while the fan is not activated even if connectors become disconnected.)

Possible causes

- Disconnection of a junction connector between FAN (A6) and the MX AUDIO Assy (A7).
- Disconnection of a connector between the MX AUDIO Assy (A5) and the RGB Assy (R8).
- Forced stop of the fan caused by a foreign object being caught in the fan.

⑥ Module microcomputer failure

Condition : When the main microcomputer has failed in communication with the module microcomputer

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Note: A module microcomputer communication failure may occur in Standby mode.

Possible causes

- Open / Short-circuit of communication line in the Assy.
- Disconnection of a connector between the RGB Assy (R3) and the DIGITAL VIDEO Assy (D3).
- Writing defectiveness of module microcomputer (IC1207) software.

⑦ Wide microcomputer failure

Condition : When the main microcomputer failed in communication with the wide microcomputer

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Possible causes

- Open / Short-circuit of communication line in the Assy.
- Writing defectiveness of the wide-microcomputer (IC5601) software.
- Writing defectiveness of the external Flash ROM (IC5602) of the wide-microcomputer.

⑧ RGB-IIC communication failure

Condition : When the main microcomputer failed in IIC communication

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Note: An RGB-IIC communication failure may occur in Standby mode.

Possible causes

- Open / Short-circuit of communication line in the Assy.
- Incomplete insertion of a SLOT or a SLOT junction PC board

Note: In a case of incomplete insertion of a SLOT, the following symptoms may occur in addition to the above results.

- Audio signals to INPUT 3 and INPUT 4 are not output.
- Switching to INPUTs 3-5 (SLOT function) is impossible.
- Video signals to INPUT 1 and INPUT 2 are not displayed.

⑨ Audio failure

Condition : When a DC component is added on the speaker output line

Results : The power is shut down as soon as a failure is detected.

Possible causes

- Disconnection of a connector between the MX AUDIO Assy (A5) and the RGB Assy (R8).
- Short-circuiting between + and - of C8615 and C8622.

● Block Diagram of the Power Down Signal System ("STANDBY/ON" LED: Blinking red)

A

B

C

D

E

F

Note: The figures ① - ⑧ indicate the number of times the "STANDBY/ON" LED blinks when shutdown occurs in the corresponding route.

● Types and function of the various protection circuits (P.D. circuits)

Assy Name	OSD Display	Red "STANDBY/ ON" LED Number of Blinks	Type of P.D. Circuits	Function	Remarks
Y DRIVE Assy	Y-DRV	1	VCP OCP	P.D. by VCP overcurrent

		D/D CONV. BLOCK (DIGITAL VIDEO Assy)	IC1901	K1906 Lo	2.5V UVP	

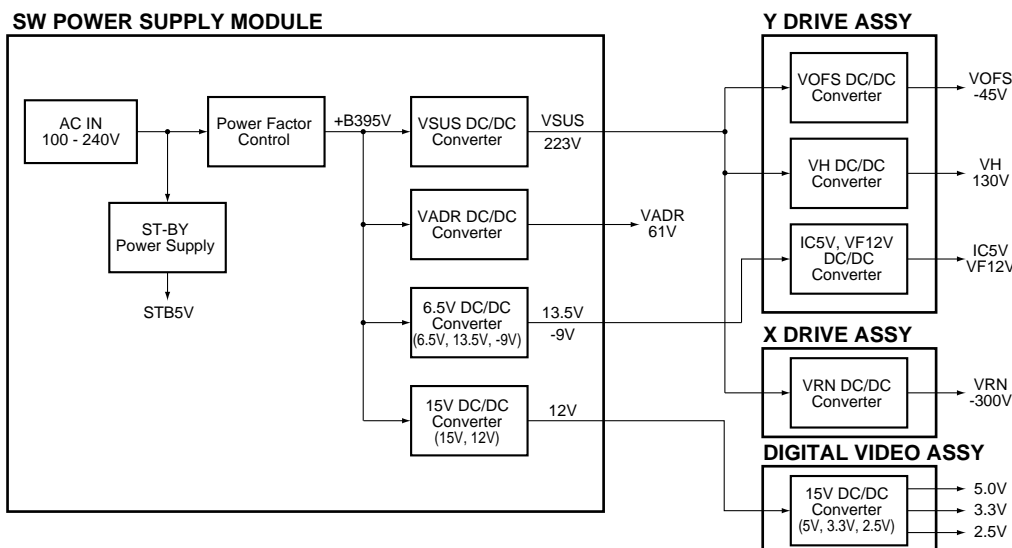

Note on PS PD

The Red "STANDBY/ON" LED blinks five times (power supply PD)

- 1 When the internal protection circuit of the SW POWER SUPPLY Module worked
- 2 When a microcomputer was not able to identify the PD point

Care must be taken because five blinks of the red LED does not always mean that the protection circuit of the SW POWER SUPPLY Module is activated.

● Block diagram of the Power supply section

● Supplementary information

1. Power on/off switch for the large-signal system (SW102)

Function: Only the power for the small-signal system (15V, 12V, 6.5V, 13.5V, and -9V) is on, and the power for the large-signal system (VSUS, VADR) is off.

Usage: Use when only an operational check for the small-signal system is required.

Supplementary information:

When this switch is to be used, the wires of pin 5 (DIG, ADR, and PD) of the P2 connector of the power-supply module should be disconnected to prevent the PD circuit from operating. To turn the power of the large-signal system off without using this switch, operation from an external PC through RS-232C commands "DRF" is basically required. In this case, the above procedure is not required, as the PD circuit is muted by software.

How to turn on the power with a command sent via RS-232C communication when the large signal system's power is off

- ① Check that the unit is in Standby mode.
- ② Transmit the RS-232C command "DRF."
- ③ Turn on the power using the remote control unit, side keys, or the command "PON."

Note: Once the power is turned off, the setting of the large signal system power returns to ON.

If you wish to turn on the power when the large signal system's power is off, transmit the DRF command each time.

2. 200V AC power-down switch (SW101)

Function: While 200V AC voltage is applied, operation of the PD circuit is turned on and off (ON when the switch is set to 100V AC, and OFF when the switch is set to 200V AC).

Setting: For the MXE model only, the switch is set to 200V, and for other models, it is set to 100V.

3. Temperature compensation of the VOFS voltage for the drive system

Function: Control the power supply voltage mentioned above according to temperature. (Temperature compensation works so that the voltage is lowered on the lower-temperature side, and is raised on the higher-temperature side.)

Purpose: To improve the yield by compensating the temperature characteristics of the panel.

Supplementary information:

For this model, temperature compensation is performed only for the VOFS voltage, and not for the VSUS voltage, and it is controlled by software.

4. When a fuse blows

- If a fuse blows, never turn the power on again only after replacing the fuse. (In most cases, the fuse itself did not have any problem. So as long as factors of overcurrent have not been removed, chances of destruction increase every time the power is turned on. In the worst case, about a dozen parts may be destroyed.)
- Generally, the whole power-supply-module assembly must be replaced.

5. Voltage adjustment of the panel drive

As this model employs the electronic VR system for the VSUS and VOFS voltages, and as the voltage-adjustment data are stored in the DIGITAL assembly, voltage adjustment of the panel drive is not necessary when the power-supply modules are changed. (For VADR, VH, and VRN, adjustments with semifixed VR controls are necessary.)

For this model, as the power-supply block has been developed and designed by an outside vendor, at the point you know which module is a cause of failure (through diagnosis described elsewhere in this manual), change the corresponding modules, and do not diagnose or repair the module. Similarly, the switches and the semifixed VRs inside the power-supply module must not be adjusted without a special reason.

8.1.3 AUTOMATIC BACKUP OF DIGITAL VIDEO ASSY DATA

■ Description

Data in the EEPROM (IC1204/2 kbit) mounted on the DIGITAL VIDEO Assy are automatically copied to an area (Area A in the figure below) of the EEPROM (IC5502/64 kbit) mounted on the RGB Assy as backup data in a case of assembly replacement. Therefore, the adjustment data for the unit (data in the EEPROM of the DIGITAL VIDEO Assy) can be maintained even after replacement of the DIGITAL VIDEO and/or RGB Assy.

Note: As for the COLOR and TINT items, even though they are adjustment data for the unit, as they are stored in Area C (see the figure below) they are not automatically backed up.

● Contents of EEPROM on the DIGITAL VIDEO Assy

- Adjustment value of PANEL White Balance
 - PANEL-R HIGH : Adjustment item for the unit
 - PANEL-G HIGH : Adjustment item for the unit
 - PANEL-B HIGH : Adjustment item for the unit
 - PANEL-R LOW : Adjustment item for the unit
 - PANEL-G LOW : Adjustment item for the unit
 - PANEL-B LOW : Adjustment item for the unit

Data are automatically backed up.
- Adjustment value of ABL
 - ABL LEVEL : Adjustment item for the unit

Data are automatically backed up.
- Adjustment value of drive system
 - X-SUS-B : Adjustment item for the unit
 - X-SUS-G : Adjustment item for the unit
 - Y-SUS-B : Adjustment item for the unit
 - Y-SUS-G : Adjustment item for the unit
 - V-SUS : Adjustment item for the unit
 - V-OFFSET : Adjustment item for the unit

Data are automatically backed up.
- Pulse meter
- Hour meter
- Various setting data of FULL MASK

■ Flow of basic automatic backup

Data in Areas A and B are judged according to keyword as to whether they have already adjusted or not, then copying is automatically performed.

- ① Automatic copying is performed every time the Service Factory mode is entered (regardless of the keyword.)
- ② When the power is turned on, keyword checking is performed, then automatic copying is performed if the keyword for the DIGITAL VIDEO Assy (Area B) is "not adjusted," and that for the RGB Assy is "adjusted."

■ Actual automatic backup operation

1. When the DIGITAL VIDEO Assy is replaced (Using the service Assy)

Keyword modification is not needed.

Replace the DIGITAL VIDEO Assy with that for service, then turn on the power. Thus, the backup data in the EEPROM of the RGB Assy are automatically copied to the EEPROM of the DIGITAL VIDEO Assy.

2. When the RGB Assy is replaced (whether replaced with the assembly for service or not does not matter)

Replace the RGB Assy, then enter the Service Factory mode. The backup data in the EEPROM of the DIGITAL VIDEO Assy are then automatically copied to the EEPROM of the RGB Assy.

3. When the DIGITAL VIDEO Assy is replaced (reuse of a repaired part) When installing the repaired DIGITAL VIDEO Assy in other unit

It is necessary to change the keyword of the DIGITAL VIDEO Assy to be reused to "not adjusted."

Before removing the DIGITAL VIDEO Assy to be reused, enter the Service Factory mode and execute SERVICE PARTS in the INITIALIZE item. (The unit must operate properly, and OSD display must be possible.) If SERVICE PARTS cannot be executed, readjustment is required.

Note: If a repaired DIGITAL VIDEO Assy is mounted in another unit (Unit 2) without this change of keyword, the automatic backup function will not work properly. Moreover, if Unit 2 is set to Service Factory mode in this condition, data in force before the repair of the DIGITAL VIDEO Assy will be copied to Area A of the RGB Assy of Unit 2, overwriting the data necessary for Unit 2. Once overwritten, the original data will not be restored.

4. When the DIGITAL VIDEO Assy is replaced (reuse of a repaired part) When installing the repaired DIGITAL VIDEO Assy in the original unit

It is not necessary to change the keyword.

After the repaired DIGITAL VIDEO Assy is mounted in the original unit, the unit can operate with its latest adjustment values.

After replacement, turn on the power. Then, the backup data in the EEPROM of the RGB Assy will automatically be copied to the EEPROM of the DIGITAL VIDEO Assy.

5. When replacing both the DIGITAL VIDEO Assy and the RGB Assy simultaneously

Automatic backup function does not work properly. Readjustment is necessary.

■ Others

1. As for the COLOR and TINT items, even though they are adjustment data for the unit, as they are stored in Area C, they are not automatically backed up. For these two items, the following applies:

- ① When only the DIGITAL VIDEO Assy is replaced
Readjustment is not required, as data are stored in the RGB Assy.
- ② When the RGB Assy is replaced
After repair, readjustment is required.

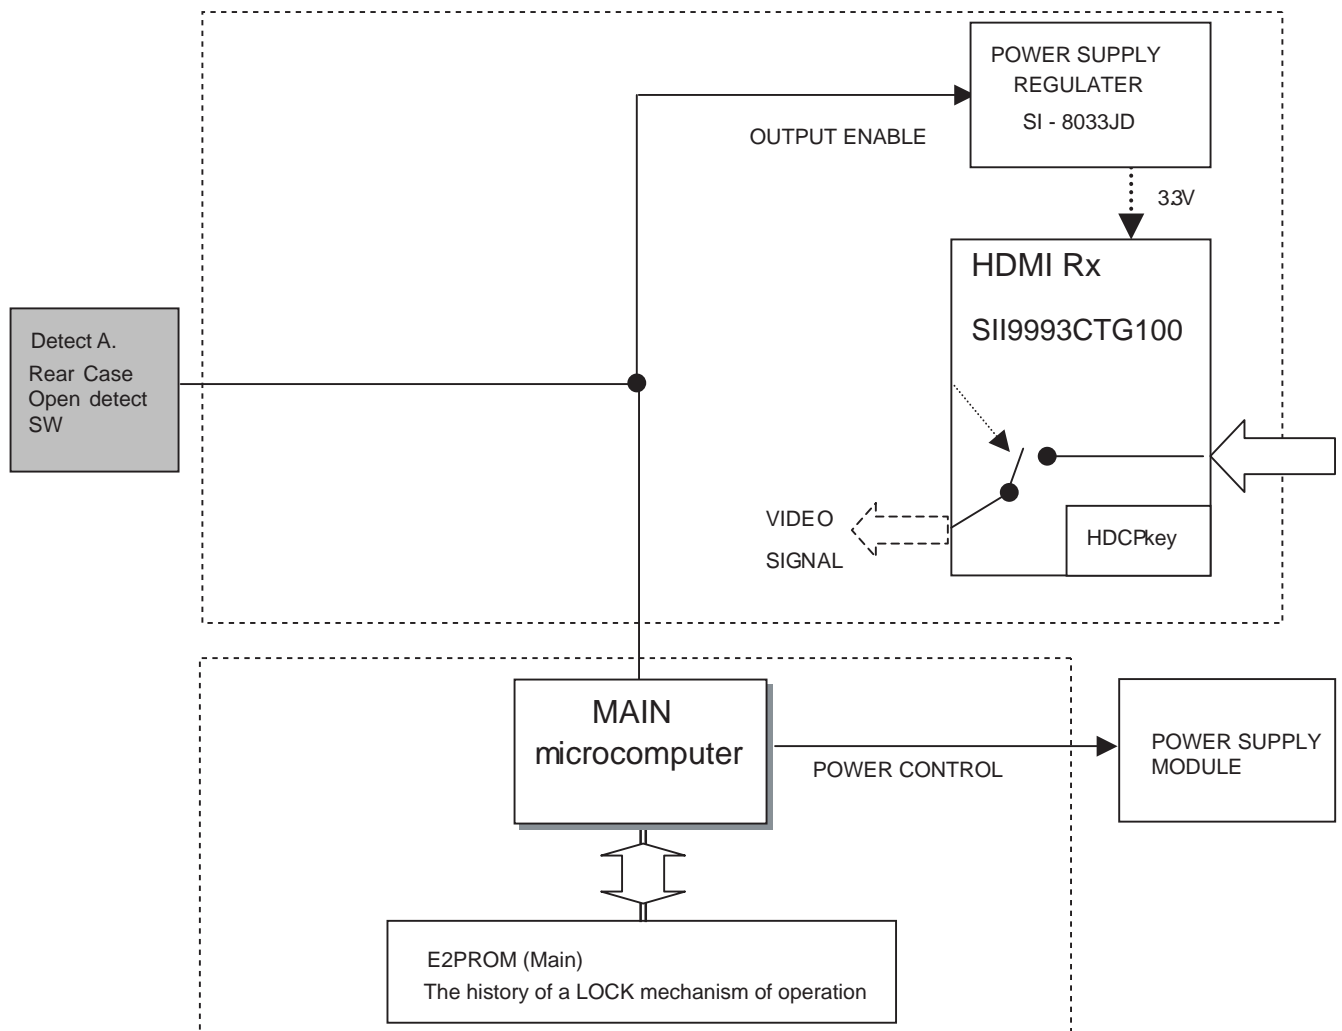

2. Except for data for the COLOR and TINT items, data in Area C in the EEPROM of the RGB Assy are assembly-adjustment data. Readjustment is not required when the RGB Assy is replaced with one for service.

8.1.4 PROTECTION OPERATION MODE

Protection mode

- This unit employs the HDCP (High-bandwidth Digital Content Protection System) for copyright protection.

The detection block of abnormalities

Protection mode

- If an abnormality is detected, the main microcomputer will store a record of it in the EEPROM.
- Then Protection mode is activated.
- During Protection mode, the LEDs will flash as shown below:

Note: Once Protection mode is activated, the POWER button of the PDP is disabled.

How to release Protection mode

- Press the **INPUT** key on the main unit and hold it pressed for at least 5 seconds.
- The LEDs, which flashed to indicate that Protection mode was activated, then light up and remain lit.
- Within 5 seconds after the LEDs light up, press the **DOWN** **INPUT**, **UP** and **POWER** keys, in that order.
- If the procedure in Step 3 succeeds, the unit will return to its normal operating mode.
- If the procedure in Step 3 does not succeed, for example, if that series of key presses has not been completed within 5 seconds, Protection mode will remain in force.

8.1.5 DISASSEMBLY

SW Power Supply Module

- ① Remove the Rear Case (50M). (Screws × 20)

- ② Remove the four screws.

- ③ Remove the SW Power Supply Module.

- ④ Remove the Clamper and insert it to another place, as indicated in the photo below.

- ⑤ Insert the SW Power Supply Module into the slits of Sub Frame L and R.

Diagnosis

DIGITAL VIDEO Assy

- ① Remove the Rear Case (50M). (Screws × 20)
- ② Remove the SW Power Supply Module.
(Connector, Screws × 4)
- ③ Remove the 11 screws.

- ④ Remove the one screw.
- ⑤ Remove the connectors.
- ⑥ Remove the Terminal Panel 50.
- ⑦ Remove the VIDEO SLOT US2 Assy.
- ⑧ Remove the four screw.
- ⑨ Remove the one screw to remove the switch.
- ⑩ Remove the connectors and binders and remove the RGB Base with PCB Assy.

- ⑪ Remove the DIGITAL VIDEO Assy.
(Connector, Circuit Board Spacers × 6)

DIGITAL VIDEO Assy

FRONT CASE (1) Assy

- ① Remove the 16 screws.
- ② Remove the Corner Plate.
- ③ Remove the 20 screws.
- ④ Remove the Mounting Bracket.

- ⑤ Remove the Front Case Assy.

FRONT CASE (2) Assy

- ① Remove the 3 screws.

- ② Loosen the Rivet.

- ③ Remove the Lead Cover.

- ④ Pull out the Flexible Cable.

- ⑤ Detach the lower part of the Front Case 50 so that it can swing open hinged at the top.

- ⑥ Remove the Front Case 50.

Y DRIVE Assy

- ① Remove the Rear Case (50M). (Screws × 20)

- ② Remove the Y DRIVE Assy. (Connectors, Screws × 8)

X DRIVE Assy

- ① Remove the Rear Case (50M). (Screws × 20)

- ② Remove the X DRIVE Assy. (Connectors, Screws × 8)

Service Manual

PDP-503CMX

ORDER NO.
ARP3150

PLASMA DISPLAY

PDP-503CMX

PDP-503MXE

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
PDP-503CMX	LUCB	AC100 - 120V	
PDP-503MXE	YVLDK	AC100 - 240V	

The main parts having their serial numbers described in the table below are applicable to this service manual. For details on replacing with the following parts, refer to Service Information for each part.

Model Name	Part numbers and serial numbers of the main parts applicable to this service manual					
	SW POWER SUPPLY MODULE (AXY1059)	REAR CASE (ANE1610)	RGB ASSY (AWZ6744)	DIGITAL VIDEO ASSY (AWV1979)	X DRIVE ASSY (AWV1984)	Y DRIVE ASSY (AWZ6745)
PDP-503CMX/ LUCB	0008541 -	0010261 -	0010891 -	0013473 -	0013671 -	0013671 -
PDP-503MXE/ YVLDK	0005421 -	0005991 -	0000641 -	0007451 -	0007611 -	0007611 -

For details, refer to "Important symbols for good services".

SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

SAFETY PRECAUTIONS

NOTICE : Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

- When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
- When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
- When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
- Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
- Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.
 - Perform the following precautions against unwanted radiation and rise in internal temperature.
 - Always return the internal wiring to the original styling.
 - Attach parts (Gasket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.
 - Perform the following precautions for the PDP panel.
 - When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
 - Make sure that the panel vent does not break. (Check that the cover is attached.)
 - Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.
 - Pay attention to the following.
 - When the front case is removed, infrared ray is radiated and may disturb reception of the remote control unit.
 - Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

Leakage Current Cold Check

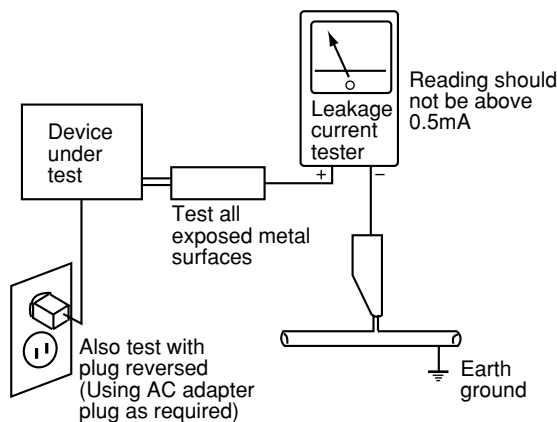

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of $0.3M\Omega$ and a maximum resistor reading of $5M\Omega$. Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

■Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

1. AC Power Cord
2. AC Inlet with Filter
3. Power Switch (S1)
4. Fuse (In the SW POWER SUPPLY Module)
5. STB Transformer and Converter Transformer (In the SW POWER SUPPLY Module)
6. Other primary side of the SW POWER SUPPLY Module

■High Voltage Generating Point

The places where voltage is 100V or more except for the charged places described above. If the places are touched, there is a risk of electric shock.

1. SW POWER SUPPLY Module (225V)
2. X DRIVE Assy (–300V to 225V)
3. Y DRIVE Assy (355V)
4. SCAN (A) Assy (355V)
5. SCAN (B) Assy (355V)
6. X CONNECTOR (A) Assy (–300V to 225V)
7. X CONNECTOR (B) Assy (–300V to 225V)

Fig.1 Charged Section and High Voltage Generating Point (Rear View)

[Important symbols for good services]

In this manual, the symbols shown-below indicate that adjustments, settings or cleaning should be made securely. When you find the procedures bearing any of the symbols, be sure to fulfill them:

1. Product safety

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

2. Adjustments

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

3. Cleaning

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

4. Shipping mode and shipping screws

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

5. Lubricants, glues, and replacement parts

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount. For replacement parts or tools, the prescribed ones should be used.

■ Caution in Replacement of Panel Chassis (50) Assy

Service Panel Assy (AWU1068) is all common use parts of for business, public use and module.
Supply it by the state that installed Circuit Board Spacer (AEC1872) and Wire Saddle (AEC1878) as follows.
Therefore need to remove it in accordance with model.

Confirm character carved a seal near the parts, and remove it.

P : Public exclusive use

W : Module exclusive use

PW : Common use of public use and module

* In case of this unit, all the parts carved a seal of character removes it.

V: 50V/div. H: 2μsec/div.
ch 2 : K2220 (Y.PSUS) - K2219 (SUSGND)
V: 50V/div. H: 2μsec/div.

● Sustain Waveform (reset pulse)

ch 1 : K3107 (X.PSUS) - K3201 (SUSGND)
V: 100V/div. H: 5μsec/div.
ch 2 : K2220 (Y.PSUS) - K2219 (SUSGND)
V: 100V/div. H: 5μsec/div.

Drive Pulse Waveforms

● Y Drive Pulse Control Waveform (1 field)

ch 1 : K2220 (Y.PSUS) - K2219 (SUSGND)
V: 100V/div. H: 2msec/div.
ch 2 : K2039 (YCP_MSK) - K2024 (DGND)
V: 10V/div. H: 2msec/div.
ch 3 : K2040 (YSUS_MSK) - K2024 (DGND)
V: 10V/div. H: 2msec/div.
ch 4 : K2041 (OFS) - K2024 (DGND)
V: 10V/div. H: 2msec/div.
ch 5 : K2053 (SOFT_D) - K2024 (DGND)
V: 10V/div. H: 2msec/div.

● Y Drive Pulse Control Waveform (1 sub-field)

ch 1 : K2220 (Y.PSUS) - K2219 (SUSGND)
V: 100V/div. H: 50μsec/div.
ch 2 : K2039 (YCP_MSK) - K2024 (DGND)
V: 10V/div. H: 50μsec/div.
ch 3 : K2040 (YSUS_MSK) - K2024 (DGND)
V: 10V/div. H: 50μsec/div.
ch 4 : K2041 (OFS) - K2024 (DGND)
V: 10V/div. H: 50μsec/div.
ch 5 : K2053 (SOFT_D) - K2024 (DGND)
V: 10V/div. H: 50μsec/div.

● X Drive Pulse Control Waveform (1 field)

ch 1 : K3107 (X.PSUS) - K3201 (SUSGND)
V: 100V/div. H: 2msec/div.
ch 2 : K3017 (XCP_MSK) - K3005 (DGND)
V: 10V/div. H: 2msec/div.
ch 3 : K3015 (XSUS_MSK) - K3005 (DGND)
V: 5V/div. H: 2msec/div.

5.PCB PARTS LIST

NOTES: ●Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

●The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

●When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω \rightarrow 56 $\times 10^1 \rightarrow$ 561 RD1/4PU $\overline{561}J$

47k Ω \rightarrow 47 $\times 10^3 \rightarrow$ 473 RD1/4PU $\overline{473}J$

0.5 Ω \rightarrow R50 RN2H $\overline{R50}K$

1 Ω \rightarrow 1R0 RS1P $\overline{1R0}K$

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω \rightarrow 562 $\times 10^1 \rightarrow$ 5621 RN1/4PC $\overline{5621}F$

6. ADJUSTMENT

6.1 SERVICE FACTORY MODE

Commands in Service Factory mode must be issued using the remote control unit (AXD1459) supplied with the Plasma Display.

6.1.1 State Transition Diagram

• AXD1459
(PDP-503CMX)

• AXD1432
(PDP-501HD)

• AXD1673
(PDP-502HD)

■ Notes on Operation with the Remote Control Unit

- In this manual, keys that are not on the remote control unit (AXD1459) supplied with the Plasma Display are designated as direct-select keys.
- To select items in Service Factory mode with the AXD1459, press the following keys as many times as required:
For selection of main items: MUTE key
For selection of other items: ▲ (UP) or ▼ (DOWN) key

■ Change of Settings When Entering Service Factory Mode

① Settings of MENU mode

- The settings for PICTURE items are reset to the center values.
Note: The PICTURE adjustment values to be reset are limited to the following:
For VIDEO: Those for the current signal mode of the selected input function
For a PC: Tables A-H are reset according to the history of the input signal mode
- All settings for SCREEN items are reset to the center values.
Note: The SCREEN adjustment values to be reset are only those for the current signal mode of the selected input function.
This is because the adjustment values of the MENU mode can be reset to the center values by executing FINAL SETUP or PICTURE DEFAULT.
- The settings for SETUP and OPTION of the MENU mode are maintained, except for the following:
COLOR TEMP: It is reset to MIDDLE.
AUTO POWER OFF/POWER MANAGEMENT: The settings are maintained, but these functions do not work.

② Adjustment values of the Integrator mode

- The following adjustment values for PICTURE and WHITE BAL are reset to the default values:
Note: The PICTURE and WHITE BAL adjustment values to be reset are limited to the following:
For VIDEO: Those for the current signal mode of the selected input function
For a PC: Tables A-H are reset according to the history of the input signal mode.
- The SCREEN settings are maintained.
- The settings for SETUP and OPTION of the Integrator menu are maintained, except for the following:
SIDE MASK LEVEL: The adjustment values are reset to the default values.
FULL MASK that has been set in Integrator mode: Released
OFF TIMER: Released
- The COLOR MODE (Integrator menu) settings that have been set in the Integrator menu are maintained.

③ Others

- If the input signal mode is changed in Service Factory mode, settings are changed according to the input signal mode, Service Factory mode is maintained, and its default display (INFORMATION VERSION) appears.
Note: When the input signal mode is changed, settings are reset as shown in ① and ② above.
- If FUNCTION switching is executed in Service Factory mode, the function is switched to the selected one, Service Factory mode is maintained, and its default display (INFORMATION VERSION) appears.
Note: When the FUNCTION is changed, settings are reset as shown in ① and ② above.
- The COLOR DETECT setting is performed based on the COLOR SYSTEM selected in MENU mode.
- Only the data at addresses 0100 to 01FF of the module microcomputer/EEPROM are copied (updated) to the module microcomputer area of the main microcomputer EEPROM.
- Various panel protection functions (still-picture detection, block-brightness detection, SCAN IC protection function) are deactivated.
Note: The protection functions are kept deactivated even after you exit Service Factory mode. To reactivate these functions, after exiting Service Factory mode, be sure to turn the power off, then back on.
- While there is no input, The partial setting, or while incompatible PC signals are input, settings that are not dependent on the signal mode can be performed. (For the MASK setting, see "MASK 1," and "MASK 2.") The setting items that are dependent on the input signal mode are grayed on the display and cannot be changed.

6.1.2 Table of Adjustment Items in Service Factory

SLOT

	B LOW	B. LOW		VOP-CM2-10	0 to 255 [128]

■Calculation of Adjustment Value in Service Factory Mode

- An actual adjustment value in Service Factory mode is the addition of the REFERENCE adjustment value and OFFSET adjustment value, subtracted by the OFFSET reference value (values indicated in brackets in the above tables).
Note: As for the items that do not have OFFSET adjustment values (R SIDE MASK LEV, G SIDE MASK LEV, as well B SIDE MASK LEV of the SIDE MASK LEVEL items, and X-SUS-B, X-SUS-G, Y-SUS-B, Y-SUS-G, V-SUS, and V-OFFSET of the DIGITAL items), the REFERENCE adjustment value becomes the actual adjustment value.
- As for COLOR MODE 2 and COLOR TEMP, the adjustment value of the selected mode subtracted by its OFFSET reference value (value indicated in brackets in the above tables) becomes the OFFSET value. Adding this value to the adjustment value of each adjustment item in RGB2 becomes the final adjustment value for the RGB2 devices (IC30 and IC102).

■Actual Calculation Examples

- Each adjustment value of SLOT/ RGB 1/RGB2/DIGITAL (REFERENCE value)
+
{ (OFFSET value) – [OFFSET reference value] } ... Calculation of a value to be added as OFFSET
- COLOR MODE2 OFFSET value
{ (COLOR MODE2 adjustment value) - [OFFSET reference value] } ... Calculation of a value to be added as OFFSET for COLOR MODE2
Note: Add it only when COLOR MODE2 is selected.
- COLOR TEMP OFFSET value
{ (COLOR TEMP adjustment value) - [OFFSET reference value] } ... Calculation of a value to be added as OFFSET for COLOR TEMP
Note: Add it only when COLOR TEMP 1,2,4, or 5 is selected.

Perform the addition in the normal operation, menu mode and COLOR TEMP adjustment mode of the Service Factory mode (in item VIDEO OPTION), and add the OFFSET value of the selected setting.

The addition of the COLOR TEMP OFFSET value is not needed in Integrator mode or in Service Factory mode (except for COLOR TEMP adjustment mode,) because the unit operates with the COLOR TEMP 3 settings.

6.1.3 Description of Service Factory Menu Display

1. In Adjustment Item

	1	5	10	15	20	25	30	35	40
1			OFS-SLOT		#1-S1-IN4-04-2*NT				
5									
10									
15			Y-DELAY			:	*	*	*
16						(*	*	*

Display color : White
 Halftone : Blue (second line/15th line
 for each 5 to 36 columns)
 When the input signal mode is not identified, the
 adjustment value is displayed with
 "_____" (_____) , and the item indication is grayed.

- Second line / 6th to 16th columns : Display the higher layer of selection item ••• In Service Factory mode
- Second line / 6th to 7th columns : Display the ID No. ••• In RS-232C Factory mode
- Second line / 9th to 16th columns : Display the higher layer of selection item ••• In RS-232C Factory mode
- Second line / 19th to 20th columns : Current color mode setting
- Second line / 22th to 23th columns : Current slot type

Slot Type or Model Type	PDA-5002	PDP-503PRO and PRO-1000HD	Slot Manufactured by Other Vender	No SLOT
Display	S1	US	T1 to T8	NO

- Second line / 25th to 27th columns : Current function
 - Second line / 29th to 32th columns : Current signal mode
 - Second line / 32th columns : Current Screen size (See "Classification of input signal" for details in each value.)
- Signal mode displays for mode 03, mode 31, mode E1, mode 61 or mode 71

Setting	Signal Mode Display
VIDEO	03
VGA	31
WVGA	E1
XGA	61
WXGA	71

Signal mode displays for mode 12 or mode 13

HDTV Mode Setting (Integrator Menu)	Signal Mode Display
1080i	12
1035i	13

Display in the no signal and incompatible signal

Signal Mode Display	Signal Definition
FB	OUT OF RANGE (Signal that cannot be measured with the main microcomputer)
FC	OUT OF RANGE (Video system signal without video signal)
FD	OUT OF RANGE (Incompatible signal at DVI input)
FE	OUT OF RANGE (Incompatible signal that is measurable with the main microcomputer, and not applicable to FC and FD)
FF	No signal

- Second line / 33th column : Current input form

Input Form	Component	Video-RGB	Composite	Y/C
Display	#	@	*	/

Non-display (blank) excepting above form.

- Second line / 34th to 35th columns : Current color system

Color System	NTSC	PAL	SECAM	4.43NTSC	PAL-M	PAL-N	BLACK/WHITE
Display	NT	PL	SC	4N	PM	PN	BW

Non-display (blank) in a case of a color system other than those mentioned above or when the COLOR SYSTEM setting is fixed.

- 15th line / 6th to 24th columns : Current item selection
- 15th line / 26th to 35th columns :

When RANGE CHECK is selected: Current selecting value

- When REFERENCE is selected : Adjustment value
 - When OFFSET is selected : OFFSET value (adjustment value) * Adjustment value is REFERENCE value + OFFSET value.
 - When VIDEO OPTION is selected : No display
- When INITIALIZE is selected : Selected setting. (No display for an item having the lower layer.)

② PD INFO.

1	5	10	15	20	25	30	35	40
1								

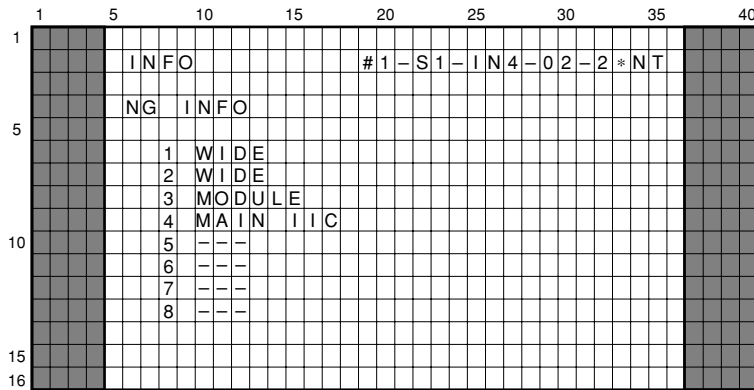

The power down point (1st or 1st and 2nd) and an hour meter at the time of the power down are displayed.

Up to eight power-downs are displayed. If the number of power-downs becomes more than 8, the latest data are added, and the oldest data are cleared.

Display details at PD INFORMATION

	Display	PD Point		Display	PD Point
1	X-DRV	X-DRIVE	5	ADRES	ADDRESS junction
2	X-DDC	X-DC/DC CONVERTER	6	ADR-K	ADDRESS resonance
3	Y-DRV	Y-DRIVE	7	POWER	Power supply
4	Y-DDC	Y-DC/DC CONVERTER	8	DC-DC	DC/DC CONVERTER (DIGITAL)

③ NG INFO.

The shutdown point is displayed.

Up to eight shutdown points are displayed. If the number of shutdowns becomes more than 8, the latest data are added, and the oldest data are cleared.

Display details at NG INFO

Display	Shutdown Point	Display	Shutdown Point
PANEL	Communication failure of the panel microcomputer	MODULE	Communication failure of the module microcomputer
MOD IIC	Communication failure of the module IIC	WIDE	Wide microcomputer
DEW	Condensation	MAIN IIC	Communication failure of the main IIC
TEMP	Abnormally high temperature	AUDIO	Failure in audio system
FAN	Failure in fans		

④ TEMPERATURE

- Indicated values are those for microcomputer A/D input or D/A output (0 to 255).
- Temperature sensors 1, 2 and 3
- FAN

Note: Refer to "Shutdown diagnosis" in the "7.1.2 DIAGNOSIS FOR SHUTDOWN AND POWER-DOWN BY LED" to calculate real sensor temperature from each indicated value.

•Operating specifications

- If this setting screen is displayed when the unit is shifted from another mode, the RGB1 display (the function called by pressing the "1" key) is displayed first. If the unit is shifted back from a lower-layer display of this setting screen, the originally selected item will be displayed.
- When any of the above keys is pressed, the corresponding operation is executed.
- When INPUT5 (DVI) is selected, the RGB1 and SLOT items cannot be selected. (These displays are not skipped during item selection.)
- When a slot is not inserted, or when a slot manufactured by other vendor is inserted, the SLOT item cannot be selected. (The display is not skipped during item selection.)
- Items that cannot be selected are grayed on the display.

●Operating specifications

- When this mode is entered, the PANEL R-HIGH display (the function called by pressing the "1" key) is displayed first.
- When any of the above keys is pressed, the current adjustment value is stored in memory, then the corresponding operation will be executed.
- When the input signal mode is not identified, the adjustment value is displayed with "____(____)," and the item indication is grayed.
- As the items X-SUS-B, X-SUS-G, Y-SUS-B, Y-SUS-G, V-SUS, and V-OFFSET do not have OFFSET adjustment values, making settings is not allowed. These items are grayed, and the adjustment values are displayed with "____(____)."

④ OFFSET — SLOT (When SLOT ST1 is connected) • This mode is effective only when SLOT ST1 is connected.

• Operating specifications

- When this mode is entered, the Y-DELAY display (the function called by pressing the "1" key) is displayed first.
- When any of the above keys is pressed, the current adjustment value is stored in memory, then the corresponding operation will be executed.
- When the input signal mode is not identified, the adjustment value is displayed with "___(___)," and the item indication is grayed.

•Operating specifications

- If this setting screen is displayed when the unit is shifted from another mode, the SIDE MASK LEVEL display (the function called by pressing the "1" key) is displayed first. If the unit is shifted back from a lower-layer display of this setting screen, the originally selected item will be displayed.
- When any of the above keys is pressed, the corresponding operation is executed.
- COLOR MODE setting during COLOR MODE adjustment
When Service Factory mode is entered, the settings for COLOR MODE become those that set on the Integrator menu. However, during COLOR MODE 2 adjustment, the unit operates in COLOR MODE 2 regardless of the settings made on the Integrator menu.
- COLOR TEMP setting during COLOR TEMP adjustment
When Service Factory mode is entered, the setting for COLOR TEMP becomes MIDDLE regardless of the user's setting. During COLOR TEMP adjustment, the unit operates in the selected COLOR TEMP mode.

•Operating specifications

- If this setting screen is displayed when the unit is shifted from another mode, the COLOR DET display (the function called by pressing the "1" key) is displayed first. If the unit is shifted back from a lower-layer display of this setting screen, the originally selected item will be displayed.
- When any of the above keys is pressed, the corresponding operation is executed.
- As for the following items, the adjusted values will be stored in memory: COLOR DET., ACL SW, INTE. MODE, MEMO, VIDEO STANDARD, PC STANDARD, VIDEO MODE 1, PC MODE 1, HOURMETER SET, PULSEMETER SET, FINAL SETUP, MASK 1, MASK 2, and PICTURE DEFAULT.

•Function description

1. COLOR DET. : The color detection system is set.

← EURO → SA → ALL →

2. EEP CHECK: EEPROM writing is checked.

The rightmost two digits in hexadecimal notation from the results of addition of data at subaddresses 1760-177C (PDC XGA/SHARP data) of the EEPROM are displayed.

3. ACL SW: The ACL is set.

4. INTEGRATOR MODE: The integrator protection is set.

5. P&P WRITE ENA: The writing permission of the EEPROM for Plug & Play is set.

6. HOURMETER SET: The hourmeter is displayed and set.

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

The upper three digits of SET DATA can be changed:

▲▼ : To select numbers

◀▶ : To select one of the upper three digits to be changed

SET : To register the setting and shift to the confirmation screen for setting changes.

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

◀▶ : To select YES or NO

SET : When YES is selected, the SET DATA are stored in memory, and the initial display appears. When NO is selected, NOW DATA is maintained, and the initial display appears.

7. PULSEMETER SET: The pulse meter is displayed and set.

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

The upper three digits of SET DATA can be changed:

▲▼ : To select numbers

◀▶ : To select one of the upper three digits to be changed

SET : To register the setting and shift to the confirmation screen for setting changes.

1	5	10	15	20	25	30	35	40
1	INIT			#1-S1-IN4-02-2*NT				
5								
10			PULSEMETER	SET	?			
15			YES	NO				
16								

<<>> : To select YES or NO
 SET : When YES is selected, the SET DATA are stored in memory, and the initial display appears. When NO is selected, NOW DATA is maintained, and the initial display appears.

8. FINAL SETUP: Factory preset values are set.
(See FINAL SETUP Details.)
9. VIDEO STANDARD: The peak occurrences of STANDARD (USER MENU / POWER CONTROL) in the video system signal is set.
(Table 1 setting in the following table.) Note: Please do not change settings during service.
10. PC STANDARD: The peak occurrences of STANDARD (USER MENU / POWER CONTROL) in the PC system signal is set.
(Table 2 setting in the following table.) Note: Please do not change settings during service.
11. VIDEO MODE1: The peak occurrences of MODE1 (USER MENU / POWER CONTROL) in the video system signal is set.
(Table 3 setting in the following table.) Note: Please do not change settings during service.
12. PC MODE1: The peak occurrences of MODE1 (USER MENU / POWER CONTROL) in the PC system signal is set.
(Table 4 setting in the following table.) Note: Please do not change settings during service.

		Current Input Signal	
		VIDEO	PC
POWER CONTROL setting	STANDARD mode	Table1	Table2
	MODE1	Table3	Table4
	MODE2	PL6 (fixed)	

13. EEP DATA READ: Data on each address of the EEPROM are displayed.

1	5	10	15	20	25	30	35	40
1	INIT			#1-S1-IN4-02-2*NT				
5								
10								
15	EEP DATA READ			: 10FF-80				
16								

<<>> : To select a digit (four digits) of an address
 ▲▼ : To select numbers
 SET : To shift to the next higher layer
 Displayed data for each address are updated each time the address is changed.
 Display color : White (Selected address is yellow)
 Half tone : Blue (second line / 15th line for each 5 to 36th columns)

14. MASK1: To select the full mask. (Refer to "① MASK1" .)
Note: The last setting for either MASK 1 or MASK 2 is stored in memory.
15. MASK2: To select the mask pattern. (Refer to "② MASK2" .)
Note: The last setting for either MASK 1 or MASK 2 is stored in memory.

Notes on MASK 1 and MASK 2

- When any key is pressed, an OSD is displayed for two seconds, and during this period the full mask signal output is stopped.
- When the full mask is selected on the MASK selection menu, two seconds after the full mask is selected (with no key pressed during this period,) the displayed OSD disappears, then full mask is displayed in turn.
- To release the mask setting, use "M00" of RS-232C Factory Adjustment mode or "MASK OFF" of Service Factory menu.
(The mask setting cannot be released with FULL MASK OFF of the Integrator menu or "FMN" of the RS-232C Factory Adjustment mode.)

16. MEMO: Memo data are displayed and edited.

A

1	5	10	15	20	25	30	35	40	
1	INFO		#1-S1-IN4-02-2*NT						
5	MEMO								

10	-----								

			BACK						
15									
16									

<MEMO/SELECT>

- With the ▲ or ▼ key, a MEMO to be edited can be selected.
- If you press the SET key, the screen shifts to MEMO/EDIT.
- If you select BACK and then press the SET key, the screen shifts to the next higher layer.

B

1	5	10	15	20	25	30	35	40					
1			MEMO										
5	PDP-503MX		BACK SPACE										
	A	B	C	D	E	F	G	H	I	J	K	L	M

10	'	'	/	-	()	@	*	:	#	?	&	~
	RESET		SPACE		END								
15													
16													

<MEMO/EDIT>

- For details on editing, see "INPUT Label" of the user menu.
- The default display is "-----". (□: Space)
- When RESET is selected, the setting is reset to the default.

C

17. SERVICE PARTS : The PD number of the module microcomputer is rewritten to the parts recognition number for service.

See "7.1.3 AUTOMATIC BACKUP OF DIGITAL VIDEO ASSY DATA".

Parts recognition number for service: Modify the leftmost digit of the PD number to F

Example: F691 (an original PD number is 5691).

Note: Modification of the PD number to the ID number for service is needed only for the EEPROM of the module microcomputer.

The ID number for service in the data area of the module microcomputer in the EEPROM of the main microcomputer must not be changed.

18. PICTURE DEFAULT

- The data adjusted in Service Factory mode will become the new default settings for PICTURE, WHITE BAL, and SIDE MASK LEVEL of the Integrator menu.
- As long as PICTURE DEFAULT or FINAL SETUP is not executed, the settings made in Service Factory mode are not reflected in the video output data in modes other than Service Factory mode.
- To make the values adjusted during Service Factory mode go into force, PICTURE DEFAULT must be executed after adjustment.

Note: If PICTURE DEFAULT is executed:

- ① All the PICTURE items set on the user menu are reset.
- ② The values for PICTURE, WHITE BAL, and SIDE MASK LEVEL of the Integrator menu will become those of current adjustment values of Service Factory mode.

E

● Operating specifications

- When this mode is entered, the MASK OFF display (the function called by pressing the "1" key) is displayed first. However, if any MASK setting has been already made, the selected MASK item is displayed first.
 - If this mode is entered with any of the MASK items in MASK 2 selected, the settings for MASK 2 become invalid, and the MASK OFF display (the function called by pressing the "1" key) is displayed first.
 - When any of the above keys is pressed, the current adjustment value is stored in memory, then the corresponding operation will be executed.
- Note:** During MASK setting, an OSD is not displayed. If another operation is selected, an OSD is displayed for 2 seconds after the MASK signal output is stopped, then the selected FULL MASK display will be displayed again.

● Operating specifications

- When this mode is entered, the MASK OFF display (the function called by pressing the "1" key) is displayed first. However, if any MASK setting has been already made, the selected MASK item is displayed first.
- If this mode is entered with any of the MASK items in MASK 1 selected, the settings for MASK 1 become invalid, and the MASK OFF display (the function called by pressing the "1" key) is displayed first.
- When any of the above keys is pressed, the current adjustment value is stored in memory, then the corresponding operation will be executed.

Note: During MASK setting, an OSD is not displayed. If another operation is selected, an OSD is displayed for 2 seconds after the MASK signal output is stopped, then the selected MASK display will be displayed again.

6.2 ADJUSTMENT REQUIRED WHEN THE SET IS REPAIRED OR REPLACED

■ RGB Assy

● When repaired

1. Adjustment is impossible when the Matrix IC or AD/PLL/AMP IC is replaced.
2. Adjustment is unnecessary in other cases.

● When replaced

White balance adjustment

■ SW POWER SUPPLY Module

● When replaced

No adjustment required.

■ DIGITAL VIDEO Assy

● When repaired

No adjustment required.

● When replaced

1. Adjustment is unnecessary when only the DIGITAL VIDEO Assy is replaced.
2. When the RGB Assy is replaced at the same time as this assembly, remove the IC1204 (24LC04(1)SN-TBB) from the old PC board of the DIGITAL VIDEO Assy and attach it to the new PC board.
3. If you are reusing the collected old PC board as a service part, attach the new IC1204 to the board.

■ Y DRIVE Assy

● When repaired

Note: If the Pulse Module fails, it is not possible to repair the Y DRIVE Assy by replacing only the Pulse Module. Replace the entire Y DRIVE Assy.

1. VOFS/VH/IC5V voltage adjustment

● When replaced

1. Panel white balance adjustment

■ X DRIVE Assy

● When repaired

Note: If the Pulse Module fails, it is not possible to repair the X DRIVE Assy by replacing only the Pulse Module. Replace the entire X DRIVE Assy.

1. VRN voltage adjustment

● When replaced

1. Panel white balance adjustment

■ Video Card (PDA-5002)

For Adjustment, Refer to the service manual ARP3093 for PDA-5002.

● When repaired

1. Y LEVEL adjustment
2. Color difference and TINT adjustment

● When replaced

No adjustment required.

Fig. 1 Configuration of the PC Board (rear side view)

6.3 ADJUSTMENT

6.3.1 MAIN UNIT ADJUSTMENT

■ VOFS/VH/IC5V Voltage Adjustment

Input Signal	Adjusting Point	Adjusting Method																																																																																																																																				
White 100%	VR2701 (VOFS) (Y DRIVE Assy)	VOFS (Offset voltage) adjustment Method 1 1. Make a note of adjustment value of V-OFFSET of REF-DIG mode in Factory mode. 2. Set the VOFS ADJ adjustment value to center (128). 3. Turn the VR2701 so that the voltage between K2710 (VOFS) and K2703 (SUS GND) becomes 45V. 4. Return the VOFS ADJ adjustment value to that you wrote down in Step 1. Method 2 1. Read the adjustment value of V-OFFSET of REF-DIG mode in Factory mode. 2. Turn the VR2701 so that the voltage between K2710 (VOFS) and K2703 (SUS GND) becomes the corresponding value indicated in the table below (tolerance: ± 0.5V): <table><tr><th>Input Command</th><th>DAC Output</th><th>Setting Voltage</th><th>Input Command</th><th>DAC Output</th><th>Setting Voltage</th></tr><tr><td>VOF000</td><td>0.4</td><td>25</td><td>VOF134</td><td>2.599212598</td><td>45.94488</td></tr><tr><td>VOF006</td><td>0.4984375</td><td>25.9375</td><td>VOF141</td><td>2.71496063</td><td>47.04724</td></tr><tr><td>VOF013</td><td>0.61328125</td><td>27.03125</td><td>VOF147</td><td>2.814173228</td><td>47.99213</td></tr><tr><td>VOF019</td><td>0.71171875</td><td>27.96875</td><td>VOF153</td><td>2.913385827</td><td>48.93701</td></tr><tr><td>VOF026</td><td>0.8265625</td><td>29.0625</td><td>VOF160</td><td>3.029133858</td><td>50.03937</td></tr><tr><td>VOF032</td><td>0.925</td><td>30</td><td>VOF166</td><td>3.128346457</td><td>50.98425</td></tr><tr><td>VOF038</td><td>1.0234375</td><td>30.9375</td><td>VOF172</td><td>3.227559055</td><td>51.92913</td></tr><tr><td>VOF045</td><td>1.13828125</td><td>32.03125</td><td>VOF179</td><td>3.343307087</td><td>53.0315</td></tr><tr><td>VOF051</td><td>1.23671875</td><td>32.96875</td><td>VOF185</td><td>3.442519685</td><td>53.97638</td></tr><tr><td>VOF058</td><td>1.3515625</td><td>34.0625</td><td>VOF191</td><td>3.541732283</td><td>54.92126</td></tr><tr><td>VOF064</td><td>1.45</td><td>35</td><td>VOF198</td><td>3.657480315</td><td>56.02362</td></tr><tr><td>VOF070</td><td>1.5484375</td><td>35.9375</td><td>VOF204</td><td>3.756692913</td><td>56.9685</td></tr><tr><td>VOF077</td><td>1.66328125</td><td>37.03125</td><td>VOF211</td><td>3.872440945</td><td>58.07087</td></tr><tr><td>VOF083</td><td>1.76171875</td><td>37.96875</td><td>VOF217</td><td>3.971653543</td><td>59.01575</td></tr><tr><td>VOF090</td><td>1.8765625</td><td>39.0625</td><td>VOF223</td><td>4.070866142</td><td>59.96063</td></tr><tr><td>VOF096</td><td>1.975</td><td>40</td><td>VOF230</td><td>4.186614173</td><td>61.06299</td></tr><tr><td>VOF102</td><td>2.0734375</td><td>40.9375</td><td>VOF236</td><td>4.285826772</td><td>62.00787</td></tr><tr><td>VOF109</td><td>2.18828125</td><td>42.03125</td><td>VOF242</td><td>4.38503937</td><td>62.95276</td></tr><tr><td>VOF115</td><td>2.28671875</td><td>42.96875</td><td>VOF249</td><td>4.500787402</td><td>64.05512</td></tr><tr><td>VOF122</td><td>2.4015625</td><td>44.0625</td><td>VOF255</td><td>4.6</td><td>65</td></tr><tr><td>VOF128</td><td>2.5</td><td>45</td><td></td><td></td><td></td></tr></table>	Input Command	DAC Output	Setting Voltage	Input Command	DAC Output	Setting Voltage	VOF000	0.4	25	VOF134	2.599212598	45.94488	VOF006	0.4984375	25.9375	VOF141	2.71496063	47.04724	VOF013	0.61328125	27.03125	VOF147	2.814173228	47.99213	VOF019	0.71171875	27.96875	VOF153	2.913385827	48.93701	VOF026	0.8265625	29.0625	VOF160	3.029133858	50.03937	VOF032	0.925	30	VOF166	3.128346457	50.98425	VOF038	1.0234375	30.9375	VOF172	3.227559055	51.92913	VOF045	1.13828125	32.03125	VOF179	3.343307087	53.0315	VOF051	1.23671875	32.96875	VOF185	3.442519685	53.97638	VOF058	1.3515625	34.0625	VOF191	3.541732283	54.92126	VOF064	1.45	35	VOF198	3.657480315	56.02362	VOF070	1.5484375	35.9375	VOF204	3.756692913	56.9685	VOF077	1.66328125	37.03125	VOF211	3.872440945	58.07087	VOF083	1.76171875	37.96875	VOF217	3.971653543	59.01575	VOF090	1.8765625	39.0625	VOF223	4.070866142	59.96063	VOF096	1.975	40	VOF230	4.186614173	61.06299	VOF102	2.0734375	40.9375	VOF236	4.285826772	62.00787	VOF109	2.18828125	42.03125	VOF242	4.38503937	62.95276	VOF115	2.28671875	42.96875	VOF249	4.500787402	64.05512	VOF122	2.4015625	44.0625	VOF255	4.6	65	VOF128	2.5	45

		The symptom in case of mis-adjustment If the VOFS Voltage adjustment is not performed properly, blinking luminance points like dots appear. If the voltage is deviated greatly from the proper adjustment point, the panel will light as white.																																																																																																																																				
	VR2703 (VH) (Y DRIVE Assy)	VH (voltage for the scan IC) Adjustment Adjust so that the voltage between K2716 (VH) and K2720 (PSUS) becomes 103V ± 0.5V. PSUS (=GNDH) is a floating GND and its electric potential is different from that of chassis GND. Be sure not to short-circuit PSUS (=GNDH) and another GND, because that may damage the unit. The symptom in case of mis-adjustment If the VH adjustment is not performed properly, blinking luminance points like dots appear. If the voltage is deviated greatly from the proper adjustment point, the panel will light as white.																																																																																																																																				
	VR2702 (IC5V) (Y DRIVE Assy)	IC5V Adjustment Adjust so that the voltage between K2707 (IC5V) and K2720 (PSUS) becomes 5.0V ± 0.1V. PSUS (=GNDH) is a floating GND and its electric potential is different from that of chassis GND. Be sure not to short-circuit PSUS (=GNDH) and another GND, because that may damage the unit.																																																																																																																																				
Note : Be sure to measure between specified test points.																																																																																																																																						

■ Sustain Pulse Waveform Adjustment

Input Signal	Adjusting Point	Adjusting Method
White 100%	REF_DIG mode in Factory mode X-SUS-B : key 9 Y-SUS-B : key 11	X-SUS-B, Y-SUS-B Adjustment Set to the indicated value with the keys on the remote control unit (9 and 11 keys).

■ VRN Voltage Adjustment

Input Signal	Adjusting Point	Adjusting Method
White 100%	VR3701 (VRN) (X DRIVE Assy)	VRN (minus reset voltage adjustment) Adjust so that the voltage between K3707 (VRN) and K3702 (SUS-GND) becomes $-300V \pm 1.0V$.

■ Panel-White-Balance Adjustment

Input Signal	Adjusting Point	Adjusting Method									
		<p>Adjust the OFFSET-DIGITAL parameters (from PANEL R-HIGH to PANEL B-LOW) in Factory mode.</p> <p>For adjustment, use the mask (MASK04) signal of Factory mode for display.</p> <p>Reference : Adjustment values when using the Minolta color-difference meter (A-100)</p> <table border="1"> <tr> <th></th><th>MASK Left Side</th><th>MASK Right Side</th></tr> <tr> <td>x</td><td>295</td><td>291</td></tr> <tr> <td>y</td><td>306</td><td>300</td></tr> </table>		MASK Left Side	MASK Right Side	x	295	291	y	306	300
	MASK Left Side	MASK Right Side									
x	295	291									
y	306	300									

■ Mask-Level Adjustment

Input Signal	Adjusting Point	Adjusting Method
	VIDEO OPTION mode in Factory mode SIDE MASK LEV. R SIDE LEVEL : key 1 G SIDE LEVEL : key 2 B SIDE LEVEL : key 3	Side mask color / Level Adjustment Set the indicated value with the keys on the remote control unit (1, 2 and 3 keys).

■ White-Balance Adjustment

- A Video Card (PDA-5002 or equivalent) is necessary for white balance adjustment for video signal of the RGB Assy.
- Adjust with video system signal (525i) and RGB (PC VGA) signal.
- Adjust so that the level and amplitude of the RED and BLUE signals become the same, referring to the GREEN signal.

Input Signal	Step	Adjusting Method
Video signal	1	Connect a Video Card to the RGB Assy through a jig cable to measure the RGB Assy. (See "Diagnosis of the Video Card (PDA-5002)" of 7.1.4 DISASSEMBLY.) The signal level cannot be measured without a jig cable. Note: Be careful of the direction of the jig cable connector when connecting.
	2	Input a 525i component signal to INPUT 1 and INPUT 2. Use a signal consisting of the luminance signal only, such as a ramp signal or STEP signal, whose black level (0IRE) and gradation can be checked. Note: You can use a Y (luminance) signal of the standard NTSC component video signal.
	3	In the signal input function (INPUT1 or INPUT2), set the display mode of the VIDEO signal to COMPONENT. MENU → SETUP → VIDEO SIGNAL : COMPONENT
	4	Set the unit to Standby mode then to Factory mode. MENU → SET → POWER ON
	5	Turn the ACL SW setting to OFF. INITIALIZE mode ACL SW : "3" key Select OFF with the right and left keys.
	6	Decrease the MAT CONT adjustment value of OFFSET-RGB1 by 3. OFFSET mode: Select RGB 1 mode with the top and bottom keys. MAT CONT : "1" key Decrease the adjustment value by 3 with the right and left keys.
	7	Decrease the MAT BRIGHT adjustment value of OFFSET-RGB1 by 2. OFFSET mode: Select RGB 1 mode with the top and bottom keys. MAT BRIGHT : "2" key Decrease the adjustment value by 2 with the right and left keys.
	8	Take a trigger of the oscilloscope with HD_PLL (3.3Vp-p) of K4805.
	9	Measure the signal waveform of the Green signal at K4603, and measure the black level (0IRE) and amplitude.
	10	AD R LOW adjustment Measure the black level (0IRE) of the Red signal at K4602, and adjust the level of AD R LOW so that its black level (0IRE) becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R LOW : "9" key Adjust with the right and left keys.
	11	AD R HIGH adjustment Measure the signal amplitude of the Red signal at K4602, and adjust the level of AD R HIGH so that its signal amplitude becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R HIGH : "6" key Adjust with the right and left keys.
	12	AD B LOW adjustment Measure the black level (0IRE) of the Blue signal at K4604, and adjust the level of AD B LOW so that its black level (0IRE) becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD B LOW : "11" key Adjust with the right and left keys.
	13	AD B HIGH adjustment Measure the signal amplitude of the Blue signal at K4604, and adjust the level of AD B HIGH so that its signal amplitude becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD B HIGH : "8" key Adjust with the right and left keys.

Input Signal	Step	Adjusting Method
Video signal		<p>● Adjust the black level of the Red and Blue signals referring to that of the Green signal</p> <p>● Adjust the signal amplitude of the Red and Blue signals referring to that of the Green signal</p>
	14	<p>Increase the MAT CONT adjustment value of OFFSET-RGB1 by 3. OFFSET mode: Select RGB 1 mode with the top and bottom keys. MAT CONT : "1" key Increase the adjustment value by 3 with the right and left keys.</p>
	15	<p>Increase the MAT BRIGHT adjustment value of OFFSET-RGB1 by 2. OFFSET mode: Select RGB 1 mode with the top and bottom keys. MAT BRIGHT : "2" key Increase the adjustment value by 2 with the right and left keys.</p>
	16	<p>Turn the ACL SW setting to ON. INITIALIZE mode ACL SW : "3" key Select ON with the right and left keys.</p>
RGB (PC) signal	1	<p>Input a RGB (PC) signal to the INPUT1 or INPUT2. Use a signal consisting of the luminance signal only, such as a ramp signal or STEP signal, whose black level (0IRE) and gradation can be checked. • Recommended signal: VESA VGA@60Hz</p>
	2	<p>Set the unit to Standby mode then to Factory mode. MENU → SET → POWER ON</p>
	3	<p>Take a trigger of the oscilloscope with HD_PLL (3.3Vp-p) of K4805.</p>
	4	<p>Measure the signal waveform of the Green signal at K4603, and measure the black level (0IRE) and amplitude.</p>
	5	<p>AD R LOW adjustment Measure the black level (0IRE) of the Red signal at K4602, and adjust the level of AD R LOW so that its black level (0IRE) becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R LOW : "9" key Adjust with the right and left keys.</p>
	6	<p>AD R HIGH adjustment Measure the signal amplitude of the Red signal at K4602, and adjust the level of AD R HIGH so that its signal amplitude becomes the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R HIGH : "6" key Adjust with the right and left keys.</p>

Input Signal	Step	Adjusting Method
RGB (PC) signal	7	AD B LOW adjustment Measure the black level (0IRE) of the Blue signal at K4604, and adjust the level of AD B LOW so that its black level (0IRE) become the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD B LOW : "11" key Adjust with the right and left keys.
	8	AD B HIGH adjustment Measure the signal amplitude of the Blue signal at K4604, and adjust the level of AD B HIGH so that its signal amplitude become the same as that of the Green signal measured in step 9. Tolerance: $\pm 0.05V$ OFFSET mode: Select RGB 1 mode with the top and bottom keys. AD R LOW : "8" key Adjust with the right and left keys.
		<div> <div> ● Adjust the black level of the Red and Blue signals referring to that of the Green signal </div> <div> ● Adjust the signal amplitude of the Red and Blue signals referring to that of the Green signal </div> </div>

■ Color-Balance Adjustment

Input Signal	Adjusting Point	Adjusting Method																																											
Flesh color	REFERENCE1 mode in Factory mode COLOR : "3" key TINT : "4" key	Color-Balance Adjustment After adjusting the white balance, check the flesh color of figures in LD still pictures. If the color is not natural, adjust it with the keys on the remote control unit.

6.4.3 GET COMMAND

● Command Description

Command	Function
GAJ	Outputting data for electronic-control-adjustment values and drive-system-adjustment values
GPW	Outputting data related to the white-balance adjustment for the panel
GS1	Outputting data such as version information, and data from the hour meter and pulse meter
GS2	Outputting data for power down, temperature and condensation information
GAS	Outputting data related to the picture quality setting of SLOT
GAR	Outputting data related to the picture quality (RGB1 of the Factory menu)
GPD	Outputting data on PD information of Service Factory menu (past eight times)
GPS	Outputting data related to SCREEN adjustment data
GSD	Outputting TxD data on SD information of Service Factory menu
GWB	Outputting data related to picture quality / white balance
GSS	Outputting data on SETUP items of menu mode / Integrator menu
GSO	Outputting data on OPTION items of menu mode / Integrator menu

GAJ: Outputting data for electronic-control-adjustment values and drive-system-adjustment values

- Data are output according to the transmission order and size of the table below.
- This command is invalid in modes other than RS-232C Factory Adjustment mode.

Order	Data Contents	Size	Remarks
1	Setting mode of electric power upper limit value	3 byte	AB* (*: 0 to 3)
2	Electric power upper limit value (ABL)	(Reference data)	3 byte
3		(Offset data)	3 byte (Note 1)
4	Vsus adjustment value	(Reference data)	3 byte
5	Vofs adjustment value	(Reference data)	3 byte
6	V-SUS-B adjustment value	(Reference data)	3 byte
7	V-SUS-G adjustment value	(Reference data)	3 byte
8	Y-SUS-B adjustment value	(Reference data)	3 byte
9	Y-SUS-G adjustment value	(Reference data)	3 byte

(Note 1) : If data are output when the Reference mode is selected, the same data as the reference data are output as the offset data.

GPW (Get Panel White balance): Outputting data related to the white-balance adjustment for the panel

- Data are output according to the transmission order and size of the table below.
- This command is invalid in modes other than the RS-232C Factory Adjustment mode.

Order	Data Contents	Size	Remarks
1	Panel color temperature mode	3 byte	PT* (*: 0 to 3)
2	Gain of W/B adjustment value Red	(Reference data)	3 byte
3		(Offset data)	3 byte (Note 1)
4	Gain of W/B adjustment value Green	(Reference data)	3 byte
5		(Offset data)	3 byte (Note 1)
6	Gain of W/B adjustment value Blue	(Reference data)	3 byte
7		(Offset data)	3 byte (Note 1)
8	Offset of W/B adjustment value Red	(Reference data)	3 byte
9		(Offset data)	3 byte (Note 1)
10	Offset of W/B adjustment value Green	(Reference data)	3 byte
11		(Offset data)	3 byte (Note 1)
12	Offset of W/B adjustment value Blue	(Reference data)	3 byte
13		(Offset data)	3 byte (Note 1)

(Note 1) : If data are output when the Reference mode is selected, the same data as the reference data are output as the offset data.

GS1: Outputting data such as version information, and data from the hour meter and pulse meter

- Data are output according to the transmission order and size of the table below.
- This command is invalid in modes other than RS-232C Factory Adjustment mode.

Order	Data Contents	Size	Remarks
1	Display information	3 byte	See below
2	Module microcomputer model number	4 byte	5691 or F691
3	Module microcomputer version	3 byte	
4	Panel microcomputer version	3 byte	
5	Panel /FLASH ROM version	3 byte	
6	Hour meter (hour)	5 byte	Unit: H (hour)
7	Pulse meter	7 byte	Unit: 0.01G (10,000,000)
8	Main microcomputer model number	4 byte	5692 or F692
9	Main microcomputer version	3 byte	
10	Wide microcomputer version	3 byte	
11	Wide /FLASH ROM version	3 byte	

■ Display Information

Data	Model
MX5	PDP-503MX (initial value)
MX4	PDP-433MX
MD5	Module 50 inches
MD4	Module 43 inches
HD5	PDP-503HD
HD4	PDP-433HD

GS2: Outputting data for power down, temperature and condensation information

- Data are output according to the transmission order and size in the table below.
- This command is valid only in the following cases: in RS-232C Factory adjustment mode, during power-down or shutdown, and for 30 seconds until a shutdown occurs because of condensation formed inside the unit or audio failure.

Note: During power-down, when a failure occurs, or for 30 seconds until a shutdown occurs, data can be obtained by directly executing "GS2" without executing "FAY." However, the ID must be set beforehand.

Order	Data Contents	Size	Remarks
1	AC information	1 byte	Always 0 (not used)
2	Service parts distinction	1 byte	0: DIGITAL ASSY adjustment done 1: DIGITAL ASSY not adjusted (Service Assy)
3	Hour meter (hour, minute)	7 byte	*****H**M
4	Power-down information	2 byte	1st/2nd (*)
5	Temperature information	3 byte	8 bit
6	Condensation information	1 byte	1: Condensation
7	Panel microcomputer communication	1 byte	1: Communication failure
8	DIGITAL EEPROM communication	1 byte	1: Communication failure
9	DIGITAL EXPANDER communication	1 byte	1: Communication failure
10	Temperature information (TEMP2)	3 byte	8 bit
11	Temperature information (TEMP3)	3 byte	8 bit
12	Module microcomputer communication	1 byte	1: Communication failure
13	Wide microcomputer communication	1 byte	1: Communication failure
14	MAIN IIC	1 byte	1: Communication failure
15	MAIN EEPROM IIC	1 byte	1: Communication failure
16	AUDIO failure	1 byte	1: AUDIO failure
17	FAN failure	1 byte	1: FAN failure

(*) See the table below on contents of PD information.

Data	Power-Down Point
0	None
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	ADDRESS junction
7	ADDRESS resonance
8	DC/DC CONVERTER (DIGITAL)

GAS (Get Adjust Slot): Outputting data related to the picture quality setting

- Data are output according to the transmission order and size in the table below.
- Data for the SLOT section of the Factory menu are output.
- This command is invalid when the current input function is one other than VIDEO input of the SLOT system.
- This command is invalid when no SLOT is connected or when a SLOT from another vendor is connected.
- This command is invalid in modes other than RS-232C Factory Adjustment mode.

Order	Data Contents		Size	Remarks
1	Y-DELAY	(Reference data)	3 byte	
2		(Offset data)	3 byte	(Note 1)
3	Y-OUT LEVEL	(Reference data)	3 byte	
4		(Offset data)	3 byte	(Note 1)
5	CD TINT	(Reference data)	3 byte	
6		(Offset data)	3 byte	(Note 1)
7	CDR OFFSET	(Reference data)	3 byte	
8		(Offset data)	3 byte	(Note 1)
9	CDB OFFSET	(Reference data)	3 byte	
10		(Offset data)	3 byte	(Note 1)
11	R-Y LEVEL	(Reference data)	3 byte	
12		(Offset data)	3 byte	(Note 1)
13	B-Y LEVEL	(Reference data)	3 byte	
14		(Offset data)	3 byte	(Note 1)

(Note 1) : If data are output when Reference mode is selected, the same data as the reference data are output as the offset data.

GAR: Output data related to the picture quality (RGB1 of the Factory menu)

- Data are output according to the transmission order and size in the table below.
- This command is invalid in modes other than RS-232C Factory Adjustment mode.

Order	Data Contents		Size	Remarks
1	AD MAIN CONT	(Reference data)	3 byte	(Note 1)
2		(Offset data)	3 byte	(Note 1) (Note 2)
3	AD R HIGH	(Reference data)	3 byte	(Note 1)
4		(Offset data)	3 byte	(Note 1) (Note 2)
5	AD G HIGH	(Reference data)	3 byte	(Note 1)
6		(Offset data)	3 byte	(Note 1) (Note 2)
7	AD B HIGH	(Reference data)	3 byte	(Note 1)
8		(Offset data)	3 byte	(Note 1) (Note 2)
9	AD R LOW	(Reference data)	3 byte	(Note 1)
10		(Offset data)	3 byte	(Note 1) (Note 2)
11	AD G LOW	(Reference data)	3 byte	(Note 1)
12		(Offset data)	3 byte	(Note 1) (Note 2)
13	AD B LOW	(Reference data)	3 byte	(Note 1)
14		(Offset data)	3 byte	(Note 1) (Note 2)
15	MAT CONT	(Reference data)	3 byte	(Note 1)
16		(Offset data)	3 byte	(Note 1) (Note 2)
17	MAT BRIGHT	(Reference data)	3 byte	(Note 1)
18		(Offset data)	3 byte	(Note 1) (Note 2)
19	MAT COLOR	(Reference data)	3 byte	(Note 1)
20		(Offset data)	3 byte	(Note 1) (Note 2)
21	MAT TINT	(Reference data)	3 byte	(Note 1)
22		(Offset data)	3 byte	(Note 1) (Note 2)

(Note 1) As for the setting data not related to the current input function/input signal/setting, dummy data are output.

(Note 2) If data are output when the Reference mode is selected, the same data as the reference data are output as the offset data.

GPS: Output data related to SCREEN adjustment data

- Data are output according to the transmission order and size in the table below.
- All data are data of an Integrator area.
- This command is valid only in Normal Operation mode and RS-232C Integrator Adjustment mode.

Order	Data Contents	Size	Remarks
1	H.POSITION	3 byte	
2	V.POSITION	3 byte	
3	CLOCK	3 byte	(Note 1)
4	PHASE	3 byte	(Note 1)
5	V.SIZE	3 byte	

(Note 1) When the current input signal mode is VIDEO or INPUT 5(DVI), dummy data(*) are output as adjustment data.

GPD (Get Power Down), PD (Power Down) : Outputting data on PD INFORMATION of the Service Factory MENU

- The acquired data are output according to the transmission order and size in the table below.
- This command is valid only in RS-232C Factory Adjustment mode and during power-down.

Note: During power-down, data can be obtained by directly executing "GPD" without executing "FAY." However, the ID must be set beforehand.

Order	Data Contents	Size	Remarks
1	The latest "1stPD INFO"	1 byte	(Note 1)
2	The latest "2ndPD INFO"	1 byte	(Note 1)
3	Hour meter information of the latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
4	Second latest "1st PD INFO"	1 byte	(Note 1)
5	Second latest "2nd PD INFO"	1 byte	(Note 1)
6	Hour meter information of the second latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
7	Third latest "1st PD INFO"	1 byte	(Note 1)
8	Third latest "2nd PD INFO"	1 byte	(Note 1)
9	Hour meter information of the third latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
10	Fourth latest "1st PD INFO"	1 byte	(Note 1)
11	Fourth latest "2nd PD INFO"	1 byte	(Note 1)
12	Hour meter information of the fourth latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
13	Fifth latest "1st PD INFO"	1 byte	(Note 1)
14	Fifth latest "2nd PD INFO"	1 byte	(Note 1)
15	Hour meter information of the fifth latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
16	Sixth latest "1st PD INFO"	1 byte	(Note 1)
17	Sixth latest "2nd PD INFO"	1 byte	(Note 1)
18	Hour meter information of the sixth latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
19	Seventh latest "1st PD INFO"	1 byte	(Note 1)
20	Seventh latest "2nd PD INFO"	1 byte	(Note 1)
21	Hour meter information of the seventh latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE
22	Eighth latest "1st PD INFO"	1 byte	(Note 1)
23	Eighth latest "2nd PD INFO"	1 byte	(Note 1)
24	Hour meter information of the eighth latest PD	7 byte	Upper 5byte: HOUR, Lower 2byte: MINUTE

(Note 1) See the table below on PD information

Data	Power Down Point
0	None
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	ADDRESS junction
7	ADDRESS resonance
8	DC/DC CONVERTER (DIGITAL)

GSD (Get Shut Down) : Outputting TxD data on SD (Shut Down) INFORMATION of Service Factory MENU

- The acquired data are output according to the transmission order and size in the table below.
 - This command is valid only in RS-232C Factory Adjustment mode and during shut down (for 30 seconds until a shutdown occurs or standby).
- Note:** During power-down, data can be obtained by directly executing "GPD" without executing "FAY." However, the ID must be set beforehand.

Table 1: GSD

Order	Data Contents	Size	Remarks
1	The latest "SD INFO"	1 byte	(Note 1)
2	First latest "SD INFO"	1 byte	(Note 1)
3	Second latest "SD INFO"	1 byte	(Note 1)
4	Third latest "SD INFO"	1 byte	(Note 1)
5	Fourth latest "SD INFO"	1 byte	(Note 1)
6	Fifth latest "SD INFO"	1 byte	(Note 1)
7	Sixth latest "SD INFO"	1 byte	(Note 1)
8	Seventh latest "SD INFO"	1 byte	(Note 1)

(Note 1) See the table below on SD information

Table 2: SD contents

GET Data	Shut Down Point
1	Panel microcomputer communication failure
2	Module IIC communication failure
3	Condensation
4	Temperature abnormality
5	FAN abnormality
6	Module microcomputer communication failure
7	Wide microcomputer communication failure
8	Main IIC communication failure
9	AUDIO failure

GWB (Get White Balance): Outputting data related to picture quality / white balance

- Data are output according to the transmission order and size in the table below.
- This command is valid only in Normal Operation mode, RS-232C Integrator Adjustment mode, and RS-232C Factory adjustment mode.
- In Normal Operation mode and RS-232C Integrator Adjustment mode, data for the current signal and color mode of the current input function in the Integrator area are output.
- In RS-232C Factory Adjustment mode, RGB2 data for the Factory mode are output.

Order	Data Contents	Size	Remarks
1	CONTRAST	3 byte	
2		3 byte	(Note 2)
3	BRIGHT	3 byte	
4		3 byte	(Note 2)
5	COLOR	3 byte	(Note 1)
6		3 byte	(Note 2)
7	TINT	3 byte	(Note 1)
8		3 byte	(Note 2)
9	R HIGH	3 byte	
10		3 byte	(Note 2)
11	G HIGH	3 byte	
12		3 byte	(Note 2)
13	B HIGH	3 byte	
14		3 byte	(Note 2)
15	R LOW	3 byte	
16		3 byte	(Note 2)
17	G LOW	3 byte	
18		3 byte	(Note 2)
19	B LOW	3 byte	
20		3 byte	(Note 2)
21	H.ENHANCE (H.SHARP)	3 byte	
22	V.ENHANCE (V.SHARP)	3 byte	

(Note 1) As for the setting data not related to the current input function/input signal/setting, dummy data are output.

(Note 2) If data are output when the Reference mode is selected, the same data as the reference data are output as the offset data.

GSS: Outputting data on SETUP items of the menu mode / Integrator menu

- Data are output according to the transmission order and size in the table below.
- This command is valid only in Normal Operation mode, RS-232C Integrator Adjustment mode, and RS-232C Factory adjustment mode.

Order	Data Contents	Size	Output	Remarks
1	COLOR TEMP	1 byte	1: COLOR TEMP1 2: COLOR TEMP2 3: COLOR TEMP3 4: COLOR TEMP4 5: COLOR TEMP5	(Note 1)

17	KEY LOCK	1 byte	0: Lock release 1: Lock	

(Note 1) Dummy data (*) are output when a SLOT manufactured by Pioneer is connected.

7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 CONFIGURATION OF THE PC BOARD

● Rear View

7.1.2 DIAGNOSIS FOR SHUTDOWN AND POWER-DOWN BY LED

This unit has self-diagnosis functions against abnormalities in the internal circuits and other operational abnormalities, and if any abnormality is detected, the STANDBY/ON indicator (LED) blinks to alert you of it.

How the indicator blinks and possible failure points and power-down points are explained below:

● Shutdown

- Operations : When a microcomputer detected abnormality, it turns the power supply OFF.
- LED display : Blinking in green

Example: How the LED blinks when DIGITAL-IIC communications fail

Number of blinking	Reason
1	Panel Microcomputer failure
2	DIGITAL-IIC communication failure
3	Condensation
4	Temperature abnormality
5	FAN abnormality
6	Module microcomputer failure
7	Wide microcomputer failure
8	RGB-IIC communication failure
9	Audio failure

How to release shutdown

If the Power key on the remote control unit is pressed, the shutdown status is released, and the unit will be turned on. (It is not necessary to press the MAIN POWER button to turn off the unit.)

● Power-down

- Operations : In an emergency, the protection circuits are activated, and the power is turned off.
- LED display : Blinking in red

Note: If more than two protection circuits are activated at almost the same time, the LED indicates this by its blinking-pattern.

Example: How the LED blinks for the first power-down (Y-DC/DC CONVERTER) and the second power-down (Y DRIVE)

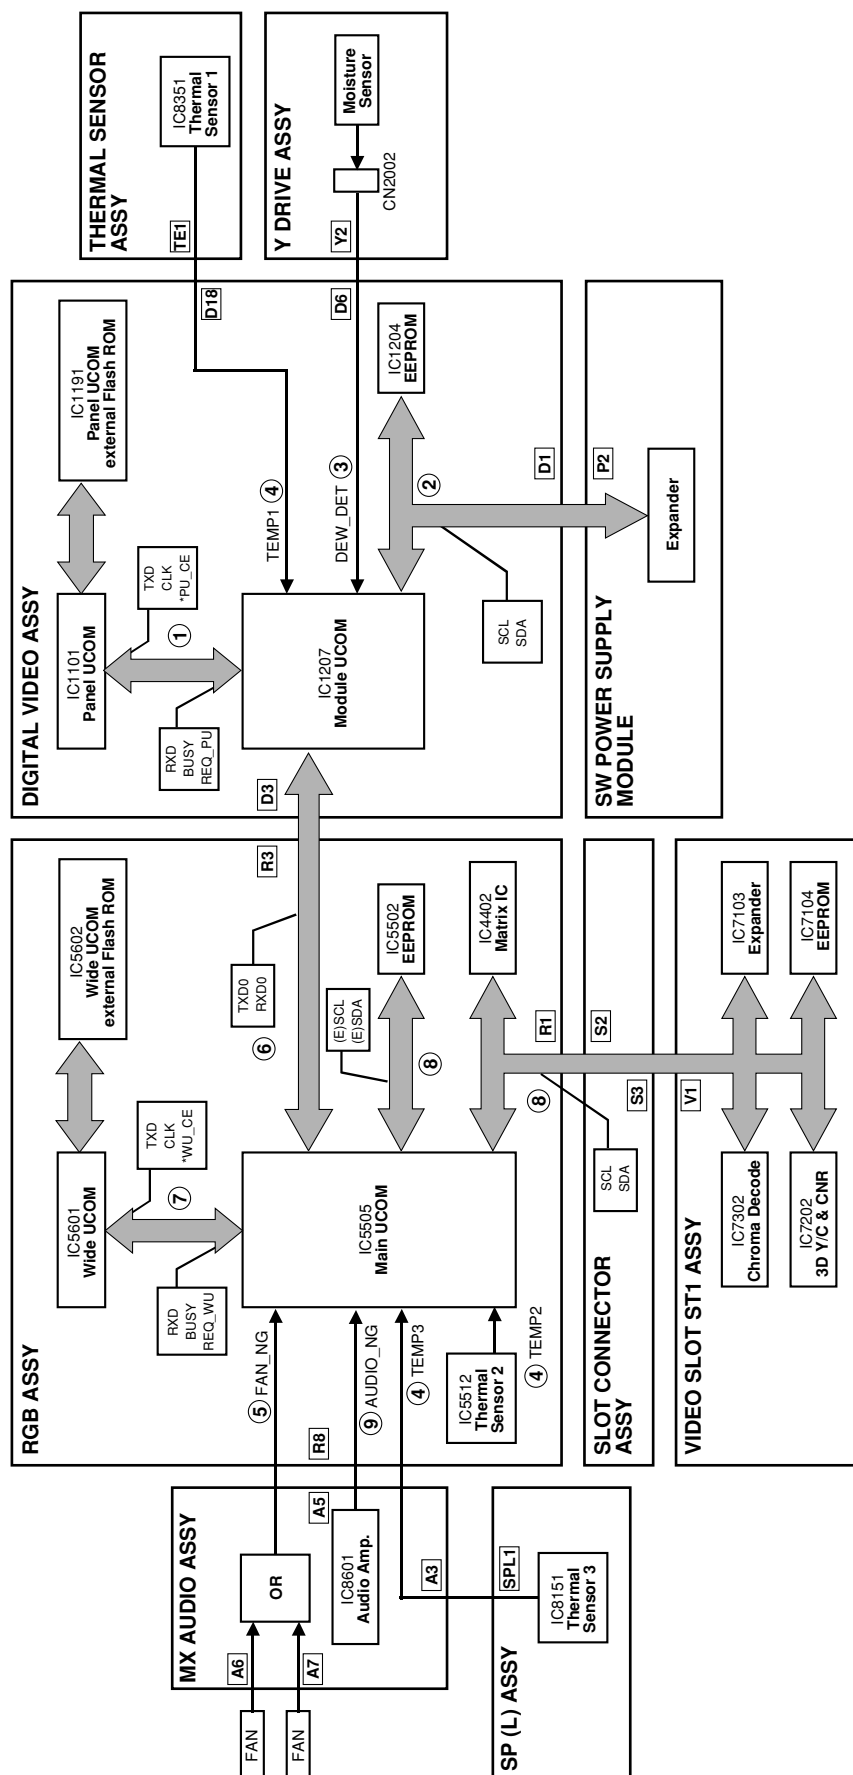

Number of blinks	Failure Point
1	Y-DRIVE
2	Y-DC/DC CONVERTER
3	X-DC/DC CONVERTER
4	X-DRIVE
5	Power supply
6	Address junction
7	Address resonance
8	DIGITAL-DC/DC CONVERTER

How to release power-down

Set the MAIN POWER button to OFF, and wait for about 30 seconds until the LED for PD (power-down) in the power-supply module is extinguished. Wait another 5 seconds, then recover the unit by setting the MAIN POWER button to ON.

Note: After power-down is released, the unit restarts and goes in to Standby mode.

● Block Diagram of the Shutdown Signal System ("STANDBY/ON" LED: Blinking in green)

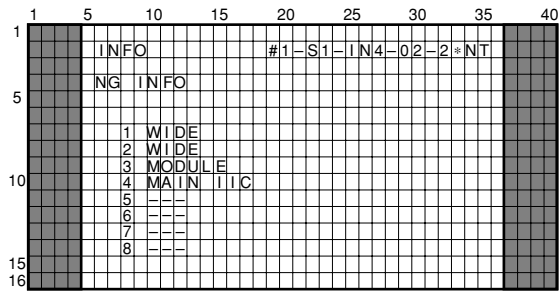

Note: The figures ① - ⑧ indicate the number of times the "STANDBY/ON" LED blinks when shutdown occurs in the corresponding route.

● Diagnosis Method in Shutdown

The data on the past eight shutdowns are stored in memory.

① OSD display of the Shutdown NG history

The shutdown NG history is displayed in "INFORMATION" of the Factory menu.

Display of the PD contents

Shutdown Point	OSD Display
Panel microcomputer communication failure	PANEL
Module IIC communication failure	MOD IIC
Condensation	DEW
Temperature abnormality	TEMP
FAN abnormality	FAN
Module microcomputer communication failure	MODULE
Wide microcomputer communication failure	WIDE
Main IIC communication failure	MAIN IIC
AUDIO failure	AUDIO

② Shutdown NG history by RS-232C command "GSD"

Order	Data Contents	Size
1	The latest "SD INFO"	1 byte
2	First latest "SD INFO"	1 byte
3	Second latest "SD INFO"	1 byte
4	Third latest "SD INFO"	1 byte
5	Fourth latest "SD INFO"	1 byte
6	Fifth latest "SD INFO"	1 byte
7	Sixth latest "SD INFO"	1 byte
8	Seventh latest "SD INFO"	1 byte

Shutdown Point	OSD Data
Panel microcomputer communication failure	1
Module IIC communication failure	2
Condensation	3
Temperature abnormality	4
FAN abnormality	5
Module microcomputer communication failure	6
Wide microcomputer communication failure	7
Main IIC communication failure	8
AUDIO failure	9

● Shutdown diagnosis

① Panel microcomputer failure

Condition : When the module microcomputer failed in communication with the panel microcomputer

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Possible causes

- Open/short-circuit of the communication lines in the assembly

② DIGITAL-IIC communication failure

Condition : When the module microcomputer failed in communication with an external EEPROM or EXPANDER

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Note: A DIGITAL-IIC communication failure may occur in Standby mode.

Possible causes

- Open / Short-circuit of communication line in the assemblies.
- Breaking of wire between the following point:
DIGITAL VIDEO Assy (D1) ↔ SW POWER SUPPLY Module (P2).

③ Condensation detection

Condition : When condensation has formed inside the unit

Results : As soon as condensation is detected, the unit will shut down.

Possible cause other than condensation

- Disconnection of CN2002 between the condensation sensor and the Y DRIVE Assy

④ Abnormally high temperature

Condition : When the internal temperature of the unit becomes abnormally high

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Possible causes if this abnormality occurs in an environment in which the temperature is not so high

- Disconnection between the SP TERMINA (L) Assy (SPL1) and MX AUDIO Assy (A3).
- Disconnection between the MX AUDIO Assy (A5) and RGB Assy (R8).
- Disconnection between the DIGITAL VIDEO Assy (D18) and temperature sensor 1 (TE1).

Screen display

Reference

Shutdown temperature of each temperature sensor

TEMP2 data ≥ 150 ($\approx 80^{\circ}\text{C}$)

TEMP3 data ≥ 101 ($\approx 56^{\circ}\text{C}$)

As for the TEMP 1 sensor, a shutdown occurs when a disconnection of connectors is detected, but does not occur because of temperature.

Temperature displayed in "INFORMATION" of the Factory menu

TEMP1 ($^{\circ}\text{C}$) \approx TEMP1 (data) -50

TEMP2 ($^{\circ}\text{C}$) \approx TEMP2 (data) /2+5

TEMP3 ($^{\circ}\text{C}$) \approx TEMP3 (data) /2+5

⑤ FAN failure

Condition : Fan failure

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Note: Fan failure is detected only in the following cases:

- When the FAN CONTROL is set to MAX
- When the FAN CONTROL is set to AUTO, and the temperature at the TEMP3 sensor is 30°C or higher (Fan failure is not detected while the fan is not activated even if connectors become disconnected.)

Possible causes

- Disconnection of a junction connector between FAN (A6) and the MX AUDIO Assy (A7).
- Disconnection of a connector between the MX AUDIO Assy (A5) and the RGB Assy (R8).
- Forced stop of the fan caused by a foreign object being caught in the fan.

⑥ Module microcomputer failure

Condition : When the main microcomputer has failed in communication with the module microcomputer

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Note: A module microcomputer communication failure may occur in Standby mode.

Possible causes

- Open / Short-circuit of communication line in the Assy.
- Disconnection of a connector between the RGB Assy (R3) and the DIGITAL VIDEO Assy (D3).
- Writing defectiveness of module microcomputer (IC1207) software.

⑦ Wide microcomputer failure

Condition : When the main microcomputer failed in communication with the wide microcomputer

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Possible causes

- Open / Short-circuit of communication line in the Assy.
- Writing defectiveness of the wide-microcomputer (IC5601) software.
- Writing defectiveness of the external Flash ROM (IC5602) of the wide-microcomputer.

⑧ RGB-IIC communication failure

Condition : When the main microcomputer failed in IIC communication

Results : An OSD is displayed for 30 seconds after the failure is detected; then the power is shut down.

Note: An RGB-IIC communication failure may occur in Standby mode.

Possible causes

- Open / Short-circuit of communication line in the Assy.
- Incomplete insertion of a SLOT or a SLOT junction PC board

Note: In a case of incomplete insertion of a SLOT, the following symptoms may occur in addition to the above results.

- Audio signals to INPUT 3 and INPUT 4 are not output.
- Switching to INPUTs 3-5 (SLOT function) is impossible.
- Video signals to INPUT 1 and INPUT 2 are not displayed.

⑨ Audio failure

Condition : When a DC component is added on the speaker output line

Results : The power is shut down as soon as a failure is detected.

Possible causes

- Disconnection of a connector between the MX AUDIO Assy (A5) and the RGB Assy (R8).
- Short-circuiting between + and - of C8615 and C8622.

		X DRIVE Assy	IC3200, IC3201 (Pulse module)			In a case where PD does not occur if the P4 connector is disconnected
		Y DRIVE Assy	IC2206, IC2214 (Pulse module)			In a case where PD does not occur if the P3 connector is disconnected
5	PS	MX AUDIO Assy	IC8601 (Audio IC)			In a case where PD does not occur if the P6 connector is disconnected
		ADDRESS CONNECT A - D Assy, RESONANCE Assy, D/D CONV. BLOCK (DIGITAL VIDEO Assy)				In a case where PD does not occur if Pin 5 of the P2 connector is disconnected
		SW POWER SUPPLY Module	SW POWER SUPPLY Module			In a case where the voltage is not output even if the P4, P3, P6 connectors and Pin 5 of the P2 connectors are disconnected
6	ADR	ADDRESS CONNECT A-D Assy	Disconnection of the D8 - D15 connectors		ADR. PD	
7	ADR K	RESONANCE Assy	TCP damage of IC6704 (ICP), disconnection of the D16 and D17 connectors, panel microcomputer is defective, external Flash ROM of the panel microcomputer is defective.		ADR. K. PD	
		D/D CONV. BLOCK (DIGITAL VIDEO Assy)	IC1901	K1901 Lo	5.0V OVP	
		D/D CONV. BLOCK (DIGITAL VIDEO Assy)	IC1901	K1902 Lo	5.0V UVP	
		D/D CONV. BLOCK (DIGITAL VIDEO Assy)	IC1901	K1903 Lo	3.3V OVP	
		D/D CONV. BLOCK (DIGITAL VIDEO Assy)	IC1901	K1904 Lo	3.3V UVP	
		D/D CONV. BLOCK (DIGITAL VIDEO Assy)	IC1901	K1905 Lo	2.5V OVP	
		D/D CONV. BLOCK (DIGITAL VIDEO Assy)	IC1901	K1906 Lo	2.5V UVP	

Note on PS PD

The Red "STANDBY/ON" LED blinks five times (power supply PD)

- 1 When the internal protection circuit of the SW POWER SUPPLY Module worked
- 2 When a microcomputer was not able to identify the PD point

Care must be taken because five blinks of the red LED does not always mean that the protection circuit of the SW POWER SUPPLY Module is activated.

● Block diagram of the Power supply section

● Supplementary information

1. Power on/off switch for the large-signal system (SW102)

Function: Only the power for the small-signal system (15V, 12V, 6.5V, 13.5V, and -9V) is on, and the power for the large-signal system (VSUS, VADR) is off.

Usage: Use when only an operational check for the small-signal system is required.

Supplementary information:

When this switch is to be used, the wires of pin 5 (DIG, ADR, and PD) of the P2 connector of the power-supply module should be disconnected to prevent the PD circuit from operating. To turn the power of the large-signal system off without using this switch, operation from an external PC through RS-232C commands "DRF" is basically required. In this case, the above procedure is not required, as the PD circuit is muted by software.

How to turn on the power with a command sent via RS-232C communication when the large signal system's power is off

- ① Check that the unit is in Standby mode.
- ② Transmit the RS-232C command "DRF."
- ③ Turn on the power using the remote control unit, side keys, or the command "PON."

Note: Once the power is turned off, the setting of the large signal system power returns to ON.

If you wish to turn on the power when the large signal system's power is off, transmit the DRF command each time.

2. 200V AC power-down switch (SW101)

Function: While 200V AC voltage is applied, operation of the PD circuit is turned on and off (ON when the switch is set to 100V AC, and OFF when the switch is set to 200V AC).

Setting: For the MXE model only, the switch is set to 200V, and for other models, it is set to 100V.

3. Temperature compensation of the VOFS voltage for the drive system

Function: Control the power supply voltage mentioned above according to temperature. (Temperature compensation works so that the voltage is lowered on the lower-temperature side, and is raised on the higher-temperature side.)

Purpose: To improve the yield by compensating the temperature characteristics of the panel.

Supplementary information:

For this model, temperature compensation is performed only for the VOFS voltage, and not for the VSUS voltage, and it is controlled by software.

4. When a fuse blows

- If a fuse blows, never turn the power on again only after replacing the fuse. (In most cases, the fuse itself did not have any problem. So as long as factors of overcurrent have not been removed, chances of destruction increase every time the power is turned on. In the worst case, about a dozen parts may be destroyed.)
- Generally, the whole power-supply-module assembly must be replaced.

5. Voltage adjustment of the panel drive

As this model employs the electronic VR system for the VSUS and VOFS voltages, and as the voltage-adjustment data are stored in the DIGITAL assembly, voltage adjustment of the panel drive is not necessary when the power-supply modules are changed. (For VADR, VH, and VRN, adjustments with semifixed VR controls are necessary.)

For this model, as the power-supply block has been developed and designed by an outside vendor, at the point you know which module is a cause of failure (through diagnosis described elsewhere in this manual), change the corresponding modules, and do not diagnose or repair the module. Similarly, the switches and the semifixed VRs inside the power-supply module must not be adjusted without a special reason.

7.1.3 AUTOMATIC BACKUP OF DIGITAL VIDEO ASSY DATA

Description

Data in the EEPROM (IC1204/2 kbit) mounted on the DIGITAL VIDEO Assy are automatically copied to an area (Area A in the figure below) of the EEPROM (IC5502/64 kbit) mounted on the RGB Assy as backup data in a case of assembly replacement. Therefore, the adjustment data for the unit (data in the EEPROM of the DIGITAL VIDEO Assy) can be maintained even after replacement of the DIGITAL VIDEO and/or RGB Assy.

Note: As for the COLOR and TINT items, even though they are adjustment data for the unit, as they are stored in Area C (see the figure below) they are not automatically backed up.

Contents of EEPROM on the DIGITAL VIDEO Assy

- Adjustment value of PANEL White Balance
 - PANEL-R HIGH : Adjustment item for the unit
 - PANEL-G HIGH : Adjustment item for the unit
 - PANEL-B HIGH : Adjustment item for the unit
 - PANEL-R LOW : Adjustment item for the unit
 - PANEL-G LOW : Adjustment item for the unit
 - PANEL-B LOW : Adjustment item for the unit

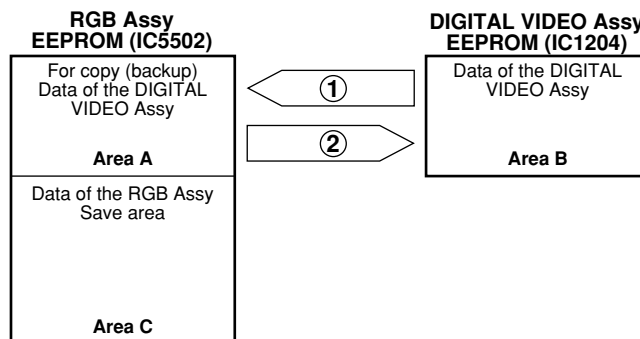

Data are automatically backed up.
- Adjustment value of ABL
 - ABL LEVEL : Adjustment item for the unit

Data are automatically backed up.
- Adjustment value of drive system
 - X-SUS-B : Adjustment item for the unit
 - X-SUS-G : Adjustment item for the unit
 - Y-SUS-B : Adjustment item for the unit
 - Y-SUS-G : Adjustment item for the unit
 - V-SUS : Adjustment item for the unit
 - V-OFFSET : Adjustment item for the unit

Data are automatically backed up.
- Pulse meter
- Hour meter
- Various setting data of FULL MASK

Flow of basic automatic backup

Data in Areas A and B are judged according to keyword as to whether they have already adjusted or not, then copying is automatically performed.

- ① Automatic copying is performed every time the Service Factory mode is entered (regardless of the keyword.)
- ② When the power is turned on, keyword checking is performed, then automatic copying is performed if the keyword for the DIGITAL VIDEO Assy (Area B) is "not adjusted," and that for the RGB Assy is "adjusted."

■ Actual automatic backup operation

1. When the DIGITAL VIDEO Assy is replaced (Using the service Assy)

Keyword modification is not needed.

Replace the DIGITAL VIDEO Assy with that for service, then turn on the power. Thus, the backup data in the EEPROM of the RGB Assy are automatically copied to the EEPROM of the DIGITAL VIDEO Assy.

2. When the RGB Assy is replaced (whether replaced with the assembly for service or not does not matter)

Replace the RGB Assy, then enter the Service Factory mode. The backup data in the EEPROM of the DIGITAL VIDEO Assy are then automatically copied to the EEPROM of the RGB Assy.

3. When the DIGITAL VIDEO Assy is replaced (reuse of a repaired part) When installing the repaired DIGITAL VIDEO Assy in other unit

It is necessary to change the keyword of the DIGITAL VIDEO Assy to be reused to "not adjusted."

Before removing the DIGITAL VIDEO Assy to be reused, enter the Service Factory mode and execute SERVICE PARTS in the INITIALIZE item. (The unit must operate properly, and OSD display must be possible.) If SERVICE PARTS cannot be executed, readjustment is required.

Note: If a repaired DIGITAL VIDEO Assy is mounted in another unit (Unit 2) without this change of keyword, the automatic backup function will not work properly. Moreover, if Unit 2 is set to Service Factory mode in this condition, data in force before the repair of the DIGITAL VIDEO Assy will be copied to Area A of the RGB Assy of Unit 2, overwriting the data necessary for Unit 2. Once overwritten, the original data will not be restored.

4. When the DIGITAL VIDEO Assy is replaced (reuse of a repaired part) When installing the repaired DIGITAL VIDEO Assy in the original unit

It is not necessary to change the keyword.

After the repaired DIGITAL VIDEO Assy is mounted in the original unit, the unit can operate with its latest adjustment values.

After replacement, turn on the power. Then, the backup data in the EEPROM of the RGB Assy will automatically be copied to the EEPROM of the DIGITAL VIDEO Assy.

5. When replacing both the DIGITAL VIDEO Assy and the RGB Assy simultaneously

Automatic backup function does not work properly. Readjustment is necessary.

■ Others

1. As for the COLOR and TINT items, even though they are adjustment data for the unit, as they are stored in Area C, they are not automatically backed up. For these two items, the following applies:

- ① When only the DIGITAL VIDEO Assy is replaced
Readjustment is not required, as data are stored in the RGB Assy.
- ② When the RGB Assy is replaced
After repair, readjustment is required.

2. Except for data for the COLOR and TINT items, data in Area C in the EEPROM of the RGB Assy are assembly-adjustment data. Readjustment is not required when the RGB Assy is replaced with one for service.

7.1.4 DISASSEMBLY

SW Power Supply Module

- ① Remove the Rear Case (50M). (Screws × 20)

- ② Remove the four screws.

- ③ Remove the SW Power Supply Module.

- ④ Remove the Clamper and insert it to another place, as indicated in the photo below.

- ⑤ Insert the SW Power Supply Module into the slits of Sub Frame L and R.

Diagnosis

DIGITAL VIDEO Assy

- ① Remove the Rear Case (50M). (Screws × 20)
- ② Remove the SW Power Supply Module.
(Connector, Screws × 4)
- ③ Remove the Terminal Panel M. (Screws × 11)
- ④ Remove the screw of the earth block.
- ⑤ Remove the RGB Base. (Screws × 4)

- ⑥ Remove the connectors and binders,
and remove the RGB Base with PCB Assys.

- ⑦ Remove the DIGITAL VIDEO Assy.
(Connector, Circuit Board Spacers × 6)

DIGITAL VIDEO Assy

Y DRIVE, SCAN (A), (B) Assy

- ① Remove the three screws.

- ② Loosen the Rivet.

- ③ Remove the Lead Cover.

- ④ Pull out the Flexible Cable.

- ⑤ Detach the lower part of the Front Case 50 so that it can swing open (hinged at the top).

- ⑥ Remove the Front Case 50.

- ⑦ Remove the Rear Case (50M). (Screws × 20)

- ⑧ Remove the Y DRIVE Assy.
(Connector, Screws × 8)

- ⑨ Reverse the SCAN (A) and SCAN (B) Assemblies.

- ⑩ Exchange the ROM if necessary.

X DRIVE Assy

- ① Remove the Rear Case (50M). (Screws × 20)
- ② Remove the X DRIVE Assy. (Connector, Screws × 8)

Diagnosis of the Video Card (PDA-5002)

- ① Remove the Rear Case (50M). (Screws × 20)
- ② Remove the Video Card. (Screws × 2)
- ③ Remove the SLOT CONNECTOR Assy from the RGB Assy and reconnect it with the Jig Cable (GGD1035).

- ④ Reconnect the Video Card. (Do not insert it into the slot.)

Diagnosis

7.2 IC INFORMATION

• The information shown in the list is basic information and may not correspond exactly to that shown in the schematic diagrams.

• List of IC

SN755864APZP, HD64F2328VF, PE1012A, PE1013B, M30624FGAFP, PD6358A, PST9246N, FS781BZB, STK795-470, BA5417, ML6426CS-1, CXA3516R

■ SN755864APZP (SCAN A ASSY : IC6201 - IC6206, SCAN B ASSY : IC6001 - IC6006) Scan IC

● Pin Assignment (Top view)

● Block Diagram

● Pin Function

Name	Pin No.	I/O	Num.	Function
CLK	86	I	1	Shift clock (start edge partial response)
DA	91	I/O	1	The serial data input of shifting register
DB	85	I/O	1	The serial data output of shifting register
LE	40	I	1	It output data done a latch of by "H" level
CLR	92	I	1	It do data of shift register with "H" by "L" level
A/B	84	I	1	A shift directional control signal of shift register
OC1	89	I	1	An output control terminal of HVO
OC2	90	I	1	An output control terminal of HVO
HVO	99, 100, 1-28 36-40, 48-76	O	64	High voltage drive output (HVO1 - HVO64)
VDD	88	—	1	Logic power supply
GND	30-32, 44-46 81-82, 93, 94-95	—	11	Standard potential. This is common to HVO1 - HVO64.
VH1	34, 35, 97, 98	—	4	The high potential circuit power supply which is common to HVO1 - HVO32
VH2	41, 42, 78, 79	—	4	The high potential circuit power supply which is common to HVO33 - HVO64
NC	29, 33, 43, 47 77, 80, 83, 96	—	8	It is the insulation electrically

● Pin Function (1/3)

No.	Pin Name	Function
1	CS_23	PE5064 (IC1703) control output
2	NC	NC Terminal
3	VSS	GND
4	VSS	GND
5	VCC	3.3V power supply
6	UA0	Address bus
7	UA1	Address bus
8	UA2	Address bus
9	UA3	Address bus
10	VSS	GND
11	UA4	Address bus
12	UA5	Address bus
13	UA6	Address bus
14	UA7	Address bus
15	UA8	Address bus
16	UA9	Address bus
17	UA10	Address bus
18	UA11	Address bus
19	VSS	GND
20	UA12	Address bus
21	UA13	Address bus
22	UA14	Address bus
23	UA15	Address bus
24	UA16	Address bus
25	UA17	Address bus
26	UA18	Address bus
27	UA19	Address bus
28	VSS	GND
29	UA20	Address bus
30	PA5	NC terminal
31	PA6	NC terminal
32	PA7	NC terminal
33	CE_PN	Enables / for panel microcomputer
34	CE_PN	Enables / for panel microcomputer
35	VSS	GND
36	VSS	GND
37	APLP	The APL value acquisition trigger signal input
38	VD_31	The V signal input from IC1401 (PD6358)
39	VCC	3.3V power supply
40	UD0	Data bus
41	UD1	Data bus
42	UD2	Data bus
43	UD3	Data bus
44	VSS	GND
45	UD4	Data bus
46	UD5	Data bus
47	UD6	Data bus
48	UD7	Data bus
49	UD8	Data bus
50	UD9	Data bus

● Pin Function (2/3)

No.	Pin Name	Function
51	UD10	Data bus
52	UD11	Data bus
53	VSS	GND
54	UD12	Data bus
55	UD13	Data bus
56	UD14	Data bus
57	UD15	Data bus
58	VCC	3.3V power supply
59	D_TXD	Communication with IC1207 (module microcomputer)
60	EXT_TXD	Communication with the outside (program notes)
61	D_RXD	Communication with IC1207 (module microcomputer)
62	EXT_RXD	Communication with the outside (program notes)
63	D_CLK	Communication with IC1207 (module microcomputer)
64	P60	NC terminal
65	VSS	GND
66	CS_FLASH	A flash memory control terminal
67	VSS	GND
68	VSS	GND
69	P61	NC terminal
70	UDREQ	IC1703 (PE5064) control terminal
71	P63	NC terminal
72	WE_FLASH	A flash memory note control signal (unused)
73	BUSY	The command receipt of a message lye Norwich output
74	REQ_PU	A communication demand to a module microcomputer
75	SEL23B	IC1703 (PE5064) control terminal
76	CLRB	IC1703 (PE5064) control terminal
77	FR_SEL	The free run select signal output
78	RST31B	The reset output to IC1301, IC1401 (PD6358)
79	RST23B	The reset output to IC1703 (PE5064)
80	FWE	Microcomputer program note control signal
81	RESET	Reset input
82	NMI	The at the rate of tang input (unused)
83	STBY	The hardware standby input (unused)
84	VCC	3.3V power supply
85	XTAL	A clock oscillation child connection terminal
86	EXTAL	A clock oscillation child connection terminal
87	VSS	GND
88	PF7	NC terminal
89	VCC	3.3V power supply
90	PF6	NC terminal
91	RDB	A read control terminal from an outside slave device
92	HWRB	A wright control terminal to an outside slave device
93	PF3	NC terminal
94	PF2	NC terminal
95	PF1	NC terminal
96	PF0	NC terminal
97	P50	NC terminal
98	P51	NC terminal
99	VSS	GND
100	VSS	GND

● Pin Function (3/3)

No.	Pin Name	Function
101	P52	NC terminal
102	P53	NC terminal
103	AVCC	3.3V power supply
104	VREF	A/D, D/A reference voltage input (unused)
105	STOPB	The drive control input from IC1703 (PE5064)
106	P41	NC terminal
107	RYBY	The flash memory note ready input
108	ADR_K_EMG_L1	The emergency input from panel bottom address resonance block
109	ADR_K_EMG_U1	The emergency input from panel upper address resonance block
110	ADR_K_EMG_L2	The emergency input from panel bottom address resonance block (unused)
111	ADR_K_EMG_U2	The emergency input from panel upper address resonance block (unused)
112	P47	NC terminal
113	AVSS	GND
114	VSS	GND
115	MUTE_ADR	The panel mute signal input
116	MUTE_SUS	The X and Y drive mute signal output (unused)
117	P15	NC terminal
118	HD	The HD signal input from outside Assy (RGB Assy etc.)
119	P13	NC terminal
120	P12	NC terminal
121	PC_VIDEO	The PC/Video identification output
122	VD	The HD signal input from outside Assy (RGB Assy etc.)
123	MD0	The microcomputer mode of operation select signal input
124	MD1	The microcomputer mode of operation select signal input
125	MD2	The microcomputer mode of operation select signal input
126	PG0	NC terminal
127	CS_31Y	IC1301, IC1401 (PD6358) control signal
128	CS_31X	IC1301, IC1401 (PD6358) control signal

Module Microcomputer

● Pin Function (1/2)

No.	Pin Name	Function
1	TXD	Serial 3 line data output for communication with a panel microcomputer
2	CLK	Serial 3 line clock for communication with a panel microcomputer
3	NC	NC terminal
4	NC	NC terminal
5	NC	NC terminal
6	NC	NC terminal
7	NC	NC terminal
8	BYTE	The external data bus width reshuffling input (I am unused and connect GND)
9	CNVSS	A power supply for program note (a note, 5V, usually, pull-down)
10	XCIN	NC terminal
11	XCOU	NC terminal
12	RESET	A reset input terminal
13	XOUT	Clock output terminal
14	VSS	GND
15	XIN	Clock input terminal
16	VCC	5V standby power
17	NMI	Because a NMI interruption terminal is unused, It handle pull up.
18	REM	The SR signal input
19	REQ_PU	A communication demand from a panel microcomputer (the pulse meter acquisition)
20	/SW_TRG	Main switch OFF / ON search
21	NC	NC terminal
22	NC	NC terminal
23	NC	NC terminal
24	AC_OFF	AC power OFF search and power supply ASSY differentiation.
25	PD_TRIGGER	Power down search
26	NC	NC terminal
27	NC	NC terminal
28	NC	NC terminal
29	SCL	EEPROM, IIC communication with power supply ASSY
30	SDA	EEPROM, IIC communication with power supply ASSY
31	TXD1	Communication with the outside (a program note)
32	RXD1	Communication with the outside (a program note)
33	CLK1	Communication with the outside (a program note)
34	BUSY1	Communication with the outside (a program note)
35	TXD0	Communication with outside ASSY (microcomputers main in RGB ASSY, etc)
36	RXD0	Communication with outside ASSY (microcomputers main in RGB ASSY, etc)
37	NC	NC terminal
38	REQ_MD/A_MUTE	232C communication demand (a request to a main microcomputer) / audio system mute
39	NC	NC terminal
40	NC	NC terminal
41	EPM	The EPM input for program note (L fixation)
42	NC	NC terminal
43	PU_CE	Enables/ for panel microcomputer
44	NC	NC terminal
45	MOD_SW/A_NG	The model of machines distinction input / audio system NG input
46	CE	The CE input for program note (H fixation)
47	DITHER/SW_STC	Power supply search of a dither setting / media receiver for module
48	NC	NC terminal
49	/SW_STP	Power supply search of a panel
50	NC	NC terminal

● Pin Function (2/2)

No.	Pin Name	Function
51	NC	NC terminal
52	RELAY	The output for power supply ON / OFF change
53	POWER/MSTATE	Input / SI861 master information for power supply ON / OFF change
54	NC	NC terminal
55	WE_PN	Buffer state control for panel microcomputer note
56	MD0	The panel microcomputer mode of operation change output
57	MD2	The panel microcomputer mode of operation change output
58	FWE	The panel microcomputer program note control signal output
59	RST_PU	The panel microcomputer reset output
60	PN_MUTE	The panel mute input
61	NC	NC terminal
62	VCC	5V standby power
63	NC	NC terminal
64	VSS	GND
65	NC	NC terminal
66	NC	NC terminal
67	/A_SCL	IIC clock for audio system
68	/A_SDA	IIC data for audio system
69	APD_MUTE	A mute signal of address series
70	ADR_K_PD	The address oscillatory system PD input
71	ADR_PD	The address series PD input
72	DCC_PD	The power supply system PD input
73	NC	NC terminal
74	NC	NC terminal
75	RST2	Panel microcomputer reset search
76	NC	NC terminal
77	/DDC_SCL	IIC communication with a media receiver
78	/DDC_SDA	IIC communication with a media receiver
79	NC	NC terminal
80	NC	NC terminal
81	DEW_DET	The dew condensation sensor input
82	NC	NC terminal
83	NC	NC terminal
84	NC	NC terminal
85	NC	NC terminal
86	LED_G	Green LED lighting (LED on interface ASSY in a panel module)
87	LED_R	Red LED lighting (LED on interface ASSY in a panel module)
88	NC	NC terminal
89	BUSY	Communication permission / inhibiting signal from a panel microcomputer
90	NC	NC terminal
91	NC	NC terminal
92	/F_KEY1	The front KEY input
93	MAX_PLS2/F_KEY2	The terminal / front KEY input for brightness setting mode of operation change
94	TEMP1	The A/D input for temperature sensor
95	MAX_PLS? /CCKM	Terminal / connection search for brightness setting mode of operation change
96	AVSS	GND for AD conversion
97	PM_ST	The A/D input for model of machines distinction
98	VREF	Reference voltage for AD conversion
99	AVCC	5V standby power for AD conversion
100	RXD	Serial 3 line data entry for communication with a panel microcomputer

PD6358A (DIGITAL VIDEO ASSY : IC1301, IC1401)

Picture Improved IC

● Pin Function (1/7)

No.	Pin Name	Function
1	VSS	GND
2	TESTO6	Test output terminal (unused)
3	OSDCLK	The CLK input for OSD
4	TTST	Test input terminal (unused)
5	VDDI	2.5V power supply
6	OVDDE-01	3.3V power supply
7	AGO0	Address data output (G signal)
8	VDDI	2.5V power supply
9	AGO2	Address data output (G signal)
10	AGO3	Address data output (G signal)
11	AGO4	Address data output (G signal)
12	VDDI	2.5V power supply
13	ARO6	Address data output (R signal)
14	AGO7	Address data output (G signal)
15	VDDI	2.5V power supply
16	ARO9	Address data output (R signal)
17	ABO9	Address data output (B signal)
18	VDDI	2.5V power supply
19	ADRCLKO2	The address CLK output (for panel upper part)
20	ARO12	Address data output (R signal)
21	ARO13	Address data output (R signal)
22	AGO14	Address data output (G signal)
23	AGO15	Address data output (G signal)
24	ARO16	Address data output (R signal)
25	ARO17	Address data output (R signal)
26	VSS	GND
27	ABO17	Address data output (B signal)
28	AGO17	Address data output (G signal)

30	ABO19	Address data output (B signal)
31	UDAT15	Microcomputer data bus
32	UDAT12	Microcomputer data bus
33	UDAT9	Microcomputer data bus
34	UDAT5	Microcomputer data bus
35	OVDDE-06	3.3V power supply
36	APLP	APL value output trigger signal
37	OVDDE-08	3.3V power supply
38	CS5BI	The chip select input
39	CS4BI	The chip select input
40	UADRI13	Microcomputer address bus
41	UADRI9	Microcomputer address bus
42	UADRI6	Microcomputer address bus
43	UADRI2	Microcomputer address bus
44	UADRI1	Microcomputer address bus
45	TESTI2	Test input terminal (unused)
46	BIT0	The subfield No output (the 0 bit)
47	OVDDE-11	3.3V power supply
48	TESTO4	Test output terminal (unused)
49	ARO39	Address data output (G signal)
50	AGO38	Address data output (G signal)

● Pin Function (2/7)

No.	Pin Name	Function
51	VSS	GND
52	ABO37	Address data output (B signal)
53	ABO36	Address data output (B signal)
54	ARO36	Address data output (R signal)
55	ABO34	Address data output (B signal)
56	ADRCLKO4	The address CLK output (for panel bottom part)
57	AGO33	Address data output (G signal)
58	AGO32	Address data output (G signal)
59	AGO31	Address data output (G signal)
60	AGO30	Address data output (G signal)
61	AGO29	Address data output (G signal)
62	VDDI	2.5V power supply
63	ABO27	Address data output (B signal)
64	AGO26	Address data output (G signal)
65	VDDI	2.5V power supply
66	AGO24	Address data output (G signal)
67	VDDI	2.5V power supply
68	ABO22	Address data output (B signal)
69	VDDI	2.5V power supply
70	ARO21	Address data output (R signal)
71	ARO20	Address data output (R signal)
72	VDDI	2.5V power supply
73	OVDDE-14	3.3V power supply
74	TDI	The JTAG input
75	RBI9	The R picture B aspect signal input (the ninth bit)
76	VSS	GND
77	RBI8	The R picture B aspect signal input (the eighth bit)
78	RBI6	The R picture B aspect signal input (the sixth bit)
79	RBI4	The R picture B aspect signal input (the fourth bit)
80	OVSS-09	GND
81	RSTB	Reset input
82	GBI8	The G picture B aspect signal input (the eighth bit)
83	OVDDE-18	3.3V power supply
84	GBI5	The G picture B aspect signal input (the fifth bit)
85	GBI2	The G picture B aspect signal input (the second bit)
86	DEI	DE signal input
87	BBI6	The B picture B aspect signal input (the sixth bit)
88	BBI3	The B picture B aspect signal input (the third bit)
89	VDI	VD signal input
90	HDI	HD signal input
91	RAI6	The R picture A aspect signal input (the sixth bit)
92	RAI2	The R picture A aspect signal input (the second bit)
93	TESTI0	Test input terminal (unused)
94	OVSS-11	GND
95	GAI7	The G picture A aspect signal input (the seventh bit)
96	GAI3	The G picture A aspect signal input (the third bit)
97	GAI0	The G picture A aspect signal input (the 0 bit)
98	BAI6	The B picture A aspect signal input (the sixth bit)
99	BAI3	The B picture A aspect signal input (the third bit)
100	BAI0	The B picture A aspect signal input (the 0 bit)

● Pin Function (3/7)

No.	Pin Name	Function
A 101	TESTO7	Test output terminal (unused)
102	TESTO5	Test output terminal (unused)
103	OSDH	OSDH input
104	BLK	OSDBLK input
105	OSDB	OSDB signal input
106	NC	NC terminal
107	ARO1	Address data output (R signal)
108	ARO2	Address data output (R signal)
109	ARO3	Address data output (R signal)
110	ARO4	Address data output (R signal)
B 111	ARO5	Address data output (R signal)
112	ABO5	Address data output (B signal)
113	ARO7	Address data output (R signal)
114	ARO8	Address data output (R signal)
115	ABO8	Address data output (B signal)
116	AGO9	Address data output (G signal)
117	AGO10	Address data output (G signal)
118	ADRCLKO1	Address CLK output (for panel upper part)
119	ABO11	Address data output (B signal)
120	ABO12	Address data output (B signal)
121	ARO14	Address data output (R signal)
C 122	ARO15	Address data output (R signal)
123	ABO15	Address data output (B signal)
124	ABO16	Address data output (B signal)
125	AGO16	Address data output (G signal)
126	ARO18	Address data output (R signal)
127	AGO19	Address data output (G signal)
128	OVDDE-05	3.3V power supply
129	UDAT13	Microcomputer data bus
130	UDAT10	Microcomputer data bus
131	UDAT6	Microcomputer data bus
D 132	UDAT3	Microcomputer data bus
133	UDAT0	Microcomputer data bus
134	OVDDE-07	3.3V power supply
135	LR	The panel LR select input
136	RDBI	Microcomputer read control terminal
137	CLKSEL	CLK select input
138	UADRI10	Microcomputer address bus
139	UADRI7	Microcomputer address bus
140	UADRI3	Microcomputer address bus
141	CYCLEB	Address data output control signal
E 142	BIT2	Subfield No. output (the second bit)
143	SFSTB	Address data output control signal
144	OVSS-05	GND
145	TESTO2	Test output terminal (unused)
146	ABO38	Address data output (B signal)
147	ARO38	Address data output (R signal)
148	ARO37	Address data output (R signal)
149	AGO36	Address data output (G signal)
150	ARO35	Address data output (R signal)

● Pin Function (4/7)

No.	Pin Name	Function
151	ADRCCLKO3	The address CLK output (for panel bottom part)
152	ABO33	Address data output (B signal)
153	ABO32	Address data output (B signal)
154	VDDI	2.5V power supply
155	ABO30	Address data output (B signal)
156	VDDI	2.5V power supply
157	ABO28	Address data output (B signal)
158	ARO28	Address data output (R signal)
159	ABO26	Address data output (B signal)
160	ABO25	Address data output (B signal)
161	ABO24	Address data output (B signal)
162	ARO24	Address data output (R signal)
163	ARO23	Address data output (R signal)
164	ARO22	Address data output (R signal)
165	AGO21	Address data output (G signal)
166	AGO20	Address data output (G signal)
167	TDO	JTAG signal
168	TMS	JTAG signal
169	RBI7	The R picture B aspect signal input (the seventh bit)
170	TCK	JTAG signal
171	RBI5	The R picture B aspect signal input (the fifth bit)
172	RBI3	The R picture B aspect signal input (the third bit)
173	RBI1	The R picture B aspect signal input (the first bit)

Pin Function

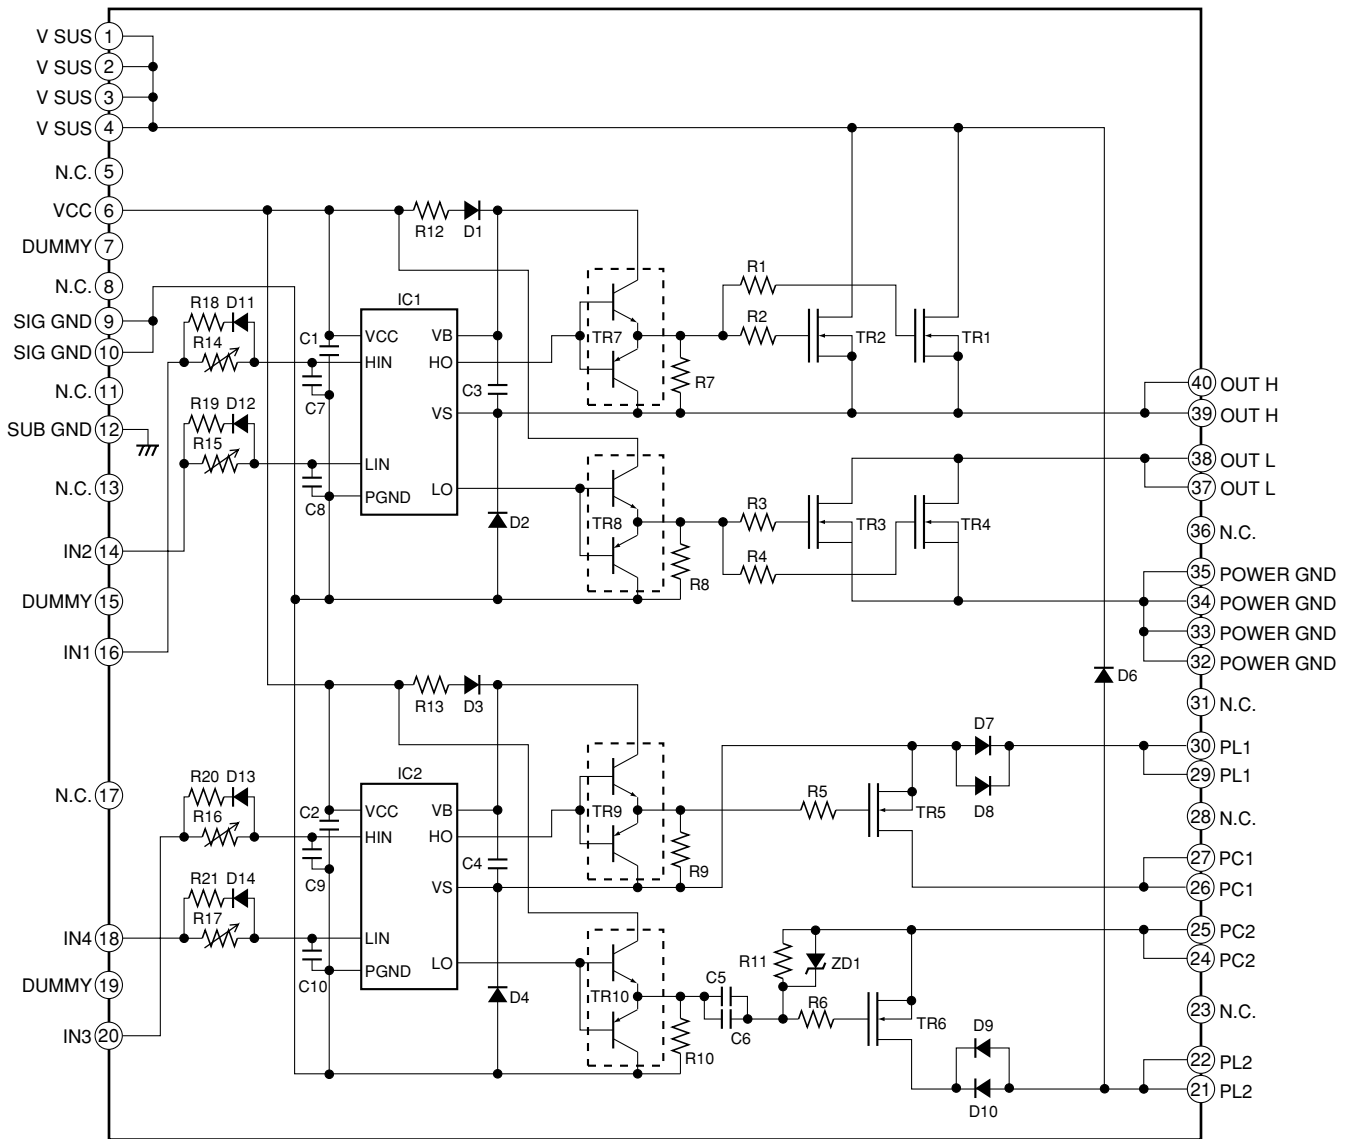

No.	Pin Name	I/O	Type	Function
1/2	Xin/Xout	I/O	Analog	Pins form an on-chip reference oscillator when connected to terminals of an external parallel resonant crystal. Xin may be connected to TTL/CMOS external clock source. If Xin connected to external clock other than crystal, leave Xout (pin2) unconnected.
7/3	S0/S1	I	CMOS/TTL	Digital control inputs to select input frequency range and output frequency scaling. Refer to Tables 7 and 8 for selection. S0 has internal pulldown. S1 has internal pullup.
4	LF	I	Analog	Loop Filter. Single ended tri-state output of the phase detector. A two-pole passive loop filter is connected to Loop Filter (LF).
6	FSOUT	O	CMOS/TTL	Modulated Clock Frequency Output. The center frequency is the same as the input reference frequency for FS781. Input frequency is multiplied by 2X and 4X for FS782 and FS784 respectively.
8	VDD	P	Power	Positive Power Supply
5	VSS	P	Power	Power Supply Ground

● Pin Function

PIN	NAME	FUNCTION	PIN	NAME	FUNCTION
1	A/B MUX	Logic input pin to select between Bank <A> and Bank video inputs. This pin is internally pulled high.	8	B _{IN} A/V _{IN} A	Unfiltered analog B- orV-channel input for Bank <A>. Sync must be provided at SYNC IN pin.
2	R _{IN} A/Y _{IN} A	Unfiltered analog R- orY-channel input for Bank <A>. Sync must be provided at SYNC IN pin.	9	B _{IN} B/V _{IN} B	Unfiltered analog B- orV-channel input for Bank . Sync must be provided at SYNC IN pin.
3	GND	Analog ground	10	B OUT	Analog B orV-channel output
4	V _{CC}	Analog 5V supply	11	G OUT	Analog G or U-channel output
5	R _{IN} B/Y _{IN} B	Unfiltered analog R- orY-channel input for Bank . Sync must be provided at SYNC IN pin.	12	V _{CCO}	5V power supply for output buffers
6	G _{IN} A/U _{IN} A	Unfiltered analog G- or U-channel input for Bank <A>. Sync must be provided at SYNC IN pin.	13	R OUT	Analog R orY-channel output
7	G _{IN} B/U _{IN} B	Unfiltered analog G- or U-channel input for Bank . Sync must be provided at SYNC IN pin.	14	G_NDO	Analog ground
			15	DISABLE	Disable/Enable pin. Turns the chip off when logic high. Internally pulled low.
			16	SYNCIN	Input for an external H-sync logic signal for filter channels. CMOS level input. Active High.

● Pin Assignment (Top view)

● Block Diagram

● Pin Function (1/3)

Pin No.	Symbol	I/O	Typical signal	Description
1	B/CbOUT	O	1.83V	Amplifier output signal monitor
2	ADDRESS	I	—	I ² C slave address setting
3	R/CrOUT	O	1.83V	Amplifier output signal monitor
4	NC	—	—	Not used
5	NC	—	—	Not used
6	XPOWER SAVE	I	TTL	Power save setting
7	DGNDREG	—	GND	Register GND
8	DVccREG	—	5V	Register power supply
9	SDA	I	—	Control register data input
10	SCL	I	—	Control register CLK input
11	XSENABLE	I	TTL	Enable signal input for 3-wire control register
12	SEROUT	O	TTL	3-wire control register data readout
13	3WIRE/I ² C	I	—	Selection of input between I ² C bus and 3-wire bus
15	AVccADREF	—	5V	Reference power supply for A/D converter
16, 94	AVccAD3	—	3.3V	Analog power supply for A/D converter
17	VRT	O	2.9V	Top reference voltage output for A/D converter
18, 92	DVccAD3	—	3.3V	Digital power supply for A/D converter
19, 32, 42, 54, 65, 76, 90	DVccADTTL	—	5V	TTL output power supply for A/D converter
20, 33, 44, 55, 67, 77, 89	DGNDADTTL	—	GND	TTL output GND for A/D converter
21, 22, 24 to 28, 31	RA0 to RA7	O	TTL	Data output for R-channel port A side
23, 30, 43, 50, 59, 66, 79, 86	DGNDAD3	—	GND	Digital GND for A/D converter
29, 80	AGNDAD3	—	GND	Analog GND for A/D converter
34 to 41	RB0 to RB7	O	TTL	Data output for R-channel port B side
45 to 49, 51 to 53	BA0 to BA7	O	TTL	Data output for B-channel port A side
56 to 58, 60 to 64	BB0 to BB7	O	TTL	Data output for B-channel port B side
68 to 75	GA0 to GA7	O	TTL	Data output for G-channel port A side
78, 81 to 85, 87, 88	GB0 to GB7	O	TTL	Data output for G-channel port B side
91	DVccAD	—	5V	Digital power supply for A/D converter
93	VRB	O	1.9V	Bottom reference voltage output for A/D converter
95	AGNDADREF	—	GND	Reference voltage GND for A/D converter

● Pin Function (2/3)

Pin No.	Symbol	I/O	Typical signal	Description
96	DV _{cc} PLL _{TTL}	—	5V	TTL output power supply for PLL
97	DGNDPLL _{TTL}	—	GND	TTL output GND for PLL
98	XCLK	O	TTL	Inverted CLK output
99	CLK	O	TTL	CLK output
100	1/2XCLK	O	TTL	Inverted 1/2CLK output
101	1/2CLK	O	TTL	1/2CLK output
103	DSYNC/ DIVOUT	O	TTL	DSYNC or DIVOUT signal output
104	UNLOCK	O	Open collector	Unlock signal output
105	SOGOUT	O	TTL	Output for SYNC ON GREEN
106	HOLD	I	TTL	Input for phase comparison disable signal
107	XTLOAD	I	TTL	Programmable counter reset setting
108	EVEN/ODD	I	TTL	Inverted pulse input of ADC sampling CLK
109	XCLKIN	I	PECL	Inverted CLK input for testing
110	CLKIN	I	PECL	CLK input for testing
111	SYNCIN1	I	TTL	Sync input 1
112	SYNCIN2	I	TTL	Sync input 2
113	CLPIN	I	TTL	Clamp pulse input
114	DV _{cc} PLL	—	5V	Digital power supply for PLL
115	DGNDPLL	—	GND	Digital GND for PLL
116	AV _{cc} VCO	—	5V	Analog power supply for PLL VCO
117	AGNDVCO	—	GND	Analog GND for PLL VCO
118	RC1	—	2.1V	External pin for PLL loop filter
119	RC2	—	2 to 4.5V	External pin for PLL loop filter
120	AV _{cc} IR	—	5V	Analog power supply for IREF
121	IREF	I	1.2V	Current setup
123	AGNDIR	—	GND	Analog GND for IREF
124	G/YIN1	I	—	G/Y signal input 1
125	AV _{cc} AMPG	—	5V	Power supply for G/Y amplifier block
126	G/YIN2	I	—	G/Y signal input 2
127	AGNDAMPG	—	GND	GND for G/Y amplifier block
128	G/YCLP	—	—	Clamp capacitor for brightness
129	B/CbCLP	—	—	Clamp capacitor for brightness
130	R/CrCLP	—	—	Clamp capacitor for brightness
132	SOGIN1	I	2.8V	SYNC ON GREEN signal input 1
133	B/CbIN1	I	—	B/Cb signal input 1

● Pin Function (3/3)

Pin No.	Symbol	I/O	Typical signal	Description
134	AVccAMPB	—	5V	Power supply for B/Cb amplifier block
135	SOGIN2	I	2.8V	SYNC ON GREEN signal input 2
136	B/CbIN2	I	—	B/Cb signal input 2
137	AGNDAMPB	—	GND	GND for B/Cb amplifier block
139	R/CrIN1	I	—	R/Cr signal input 1
140	AVccAMPR	—	5V	Power supply for R/Cr amplifier block
141	R/CrIN2	I	—	R/Cr signal input 2
142	AGNDAMPR	—	GND	GND for R/Cr amplifier block
143	G/YOUT	O	1.83V	Monitor pin for amplifier output signal
144	DAC TEST OUT	O	5V	DAC testing output for amplifier block control register
14, 102, 122, 131, 138	DPGND	—	GND	GND

8. PANEL FACILITIES

PLASMA DISPLAY [PDP-503CMX, PDP-503MXE]

■ MAIN UNIT

Note

When optional speakers have been connected, the operation panel on the main unit will not be operable.

Main unit

- ① **Display stand**
- ② **Remote control sensor**
Point the remote control toward the remote sensor to operate the unit.
- ③ **STANDBY/ON indicator**
This indicator is red during standby mode, and turns to green when the unit is in the operation mode.
Flashes green when Power-Management function is operating.
The flashing pattern is also used to indicate error messages.

Operation panel on the main unit

- ④ **STANDBY/ON button**
Press to put the display in operation or standby mode.
- ⑤ **INPUT button**
Press to select input.
- ⑥ **MENU button**
Press to open and close the on-screen menu.
- ⑦ **ADJUST (▲/▼/▶/◀) buttons**
Use to navigate menu screens and to adjust various settings on the unit.
Usage of cursor buttons within operations is clearly indicated in the on-screen display.
- ⑧ **SET button**
Press to adjust or enter various settings on the unit.
- ⑨ **SCREEN SIZE button**
Press to select the screen size.
- ⑩ **AUTO SET UP button**
When using computer signal input, automatically sets the POSITION and CLOCK/PHASE to optimum values.

PLASMA DISPLAY [PDP-503CMX, PDP-503MXE]

■ CONNECTION PANEL

The plasma display is provided with 2 video input connectors, 1 video output connector, audio input/output jacks and speaker terminals. There are also CONTROL IN/OUT jacks for connection of PIONEER components with the mark. When this video card is installed on a plasma display, an additional three sets of video input connectors are provided (total five), together with one additional video output connector (total two).

① SPEAKER (R) terminal

For connection of an external right speaker.
Connect a speaker whose impedance is 8 -16 Ω.

② CONTROL IN/OUT (monaural mini jacks)

For connection of PIONEER components that bear the mark. Making CONTROL connection enables control of the plasma display as a component in a system.

③ COMBINATION IN/OUT

DO NOT MAKE ANY CONNECTIONS TO THESE TERMINALS.

These terminals are used in the factory setup.

④ RS-232C

DO NOT MAKE ANY CONNECTIONS TO THIS TERMINAL.

This terminal is used in the factory setup.

⑤ INPUT1 (mini D-sub 15 pin)

For connection of components that have RGB or component output jacks such as a personal computer, DVD player, or external RGB decoder. Make sure that the connection made corresponds to the format of the signal output from the connected component.

⑥ OUTPUT (INPUT1) (mini D-sub 15 pin)

Use the OUTPUT (INPUT1) connector to output the video signal to an external monitor or other component. Note: The video signal will not be output from the OUTPUT (INPUT1) connector when the main power of this display is off or in standby mode.

⑦ INPUT2 (BNC jacks)

For connection of components that have RGB or component output jacks such as a personal computer, DVD player, or external RGB decoder. Make sure that the connection made corresponds to the format of the signal output from the connected component.

⑧ Synchronizing signal impedance selector switch

Depending on the connections made at INPUT2, it may be necessary to set this switch to match the output impedance of the connected component's synchronization signal.

When the output impedance of the component's synchronization signal is above 75 Ω, set this switch to the 2.2 kW position.

⑨ AUDIO INPUT (Stereo mini jack)

Use to obtain sound when INPUT1, INPUT2 or INPUT5 is selected.

Connect this jack to the audio output connector of the device connected to the plasma display's INPUT1 or INPUT2, or to the audio output connector of the device connected to the video card's INPUT5.

⑩ AUDIO OUTPUT (Stereo mini jack)

Use to output the audio of the selected source component connected to the plasma display to an AV amplifier or similar component.

⑪ MAIN POWER switch

Use to switch the main power of the plasma display on and off.

⑫ AC INLET

A power cable is furnished with the plasma display; connect one end of the power cable to this connector, and the other end to a standard AC power source.

⑬ SPEAKER (L) terminal

For connection of an external left speaker. Connect a speaker that has an impedance of 8 -16 Ω.

PLASMA DISPLAY [PDP-503CMX, PDP-503MXE]

■ REMOTE CONTROL UNIT

① SCREEN SIZE button

Press to select the screen size.

② INPUT buttons

Use to select the input.

③ MENU button

Press to open and close the on-screen menu.

④ ADJUST (▲/▼/▶/◀) buttons

Use to navigate menu screens and to adjust various settings on the unit.

Usage of cursor buttons within operations is clearly indicated at the bottom the on-screen menu display.

⑤ SET button

Press to adjust or enter various settings on the unit.

⑥ MUTING button

Press to mute the volume.

⑦ AUTO SET UP button

When using computer signal input, automatically sets the POSITION and CLOCK/ PHASE to optimum values.

⑧ STANDBY/ON button

Press to put the unit in operation or standby mode.

⑨ DISPLAY button

Press to view the unit's current input and setup mode.

⑩ POINT ZOOM button

Use to select and enlarge one part of the screen.

⑪ VOLUME (+/-) buttons

Use to adjust the volume.

■ INSTALLATION OF THE UNIT

A Installation using the supplied display stand

Be sure to fix the supplied stand to the installation surface.
Use commercially available M8 bolts that are 25 mm longer than the thickness of the installation surface.

1. Fix the supplied stand to the installation surface at each of the 4 prepared holes using commercially available M8 bolts .

2. Set this unit in the stand.

3. Fix this unit using the supplied washer and bolt.

CAUTION

Because this unit weighs about 88 lbs 3 oz (about 40 kg) and the lack of depth makes it fairly unstable, please use 2 people or more when packing, carrying

Installation using the optional PIONEER stand or installation bracket

- Please be sure to request installation or mounting of this unit or the installation bracket by an installation specialist or the dealer where purchased.
- When installing, be sure to use the bolts provided with the stand or installation bracket.
- For details concerning installation, please refer to the instruction manual provided with the stand or installation bracket.

Installation using accessories other than the PIONEER stand or installation bracket (sold separately)

- When possible, please install using parts and accessories manufactured by PIONEER. PIONEER will not be held responsible for accident or damage caused by the use of parts and accessories manufactured by other companies.
- For custom installation, please consult the dealer where the unit was purchased, or a qualified installer.

Wall-mount installation of the unit

This unit has been designed with bolt holes for wall-mount installation, etc.. The installation holes that can be used are shown in the diagram below.

- Be sure to attach in 4 or more locations above and below, left and right of the center line.
- Use bolts that are long enough to be inserted 1/2 inch (12 mm) to 11/16 inch (18 mm) into the main unit from the attaching surface for both a holes and b holes. Refer to the side view diagram below.
- As this unit is constructed with glass, be sure to install it on a flat, unwarpd surface.

CAUTION

To avoid malfunction, overheating of this unit, and possible fire hazard, make sure that the vents on the main unit are not blocked when installing. Also, as hot air is expelled from the air vents, be careful of deterioration and dirt build up on rear surface wall, etc..

CAUTION

Please be sure to use an M8 (Pitch = 1.25 mm) bolt. (Only this size bolt can be used.)

CAUTION

Because this unit weighs about 88 lbs 3 oz (about 40 kg) and the lack of depth makes it fairly unstable, please use 2 people or more when packing, carrying or installing.

CAUTION

This unit incorporates a thin design. To ensure safety if vibrated or shaken, please be sure to take measures to prevent the unit from tipping over.
